## Valid Dumps EAEP2201 Questions, Test EAEP2201 Simulator Online

Begin Your Preparation with Esri EAEP2201 Real Questions. The BraindumpsPrep is a reliable platform that is committed to making your preparation for the Esri EAEP2201 examination easier and more effective. To meet this objective, the BraindumpsPrep is offering updated and real Understanding Enterprise Administration Professional 2201 exam dumps. These Esri EAEP2201 Exam Questions are approved by experts.

## Esri Enterprise Administration Professional 2201 Sample Questions (Q55-Q60):

### NEW QUESTION # 55

An administrator needs to share content with a specific group of users. The administrator is concerned that several important applications will stop working for the users if they leave the group.

Which action should the administrator perform to prevent users from leaving the group?

- A. Create a group visible only to group members

- B. Create an administrative group
- C. Change the role of the users

**Answer: A**

#### NEW QUESTION # 56

A GIS administrator is installing Portal for ArcGIS and ArcGIS Server on separate machines. They need services to run continuously and comply with enterprise password policies. Which account should be used to deploy the software?

- A. A GIS administrator account
- **B. A specific group-managed service account**
- C. Windows built-in account with local admin privileges
- D. Create local accounts for every machine being used

**Answer: B**

Explanation:

For multi-machine deployments, a Group Managed Service Account (gMSA) is the best option. It supports running services across multiple servers without requiring manual password updates, making it ideal for high-availability and enterprise security compliance. From Esri's deployment guidance:

"Use a group managed service account (gMSA) when installing ArcGIS Enterprise on multiple machines. gMSAs allow centralized password management and seamless cross-machine authentication."

\* Option A could lead to password expiration issues.

\* Option C lacks centralized management and complicates maintenance.

Reference: ArcGIS Enterprise - Multi-Machine Installations and Secure Service Account Practices

#### NEW QUESTION # 57

A GIS administrator must share an imagery service with another ArcGIS Enterprise. The administrator sets up a distributed collaboration with the other ArcGIS Enterprise and shares the service as a reference. The users in the other organization keep being prompted for credentials.

Which action should the administrator perform?

- A. Set the collaboration workspace to send and receive
- B. Share the image service as a copy
- C. Configure the service with anonymous access
- **D. Save viewer credentials in the collaboration**

**Answer: D**

Explanation:

When sharing a referenced service through a distributed collaboration, users accessing the service from the guest organization need valid credentials unless credentials are stored with the item. To prevent repeated credential prompts, the administrator should save credentials with the item when it is shared, particularly for read-only access like viewing imagery.

From the ArcGIS Enterprise documentation on collaborations:

"When sharing services as references across ArcGIS Enterprise organizations, credentials must be stored with the item to ensure seamless access unless the service is public."

\* Option A (sharing as a copy) is an alternative, but it's not what was asked for and might not be ideal for large imagery.

\* Option C (workspace direction) affects sync behavior, not access control.

\* Option D would only work if the service is made public, which often isn't acceptable for internal data.

Reference: ArcGIS Enterprise - Distributed Collaborations and Shared Credential Requirements

#### NEW QUESTION # 58

An organization expects a large influx of users who use the standard analysis tools in the portal Map Viewer. The organization is concerned with the hosting server's available resources.

Which system resource should be closely monitored?

- A. Network utilization

- B. CPU utilization
- C. Disk activity

**Answer: B**

Explanation:

When users perform standard analysis tasks in the portal Map Viewer, the hostingserver executes geoprocessing operations that are computationally intensive. These operations require significant CPU resources. Monitoring CPU utilization helps ensure that the server can handle the increased load without performance degradation.

While disk activity and network utilization are important, they are less directly impacted by standard analysis tasks compared to CPU usage. Therefore, CPU utilization is the primary resource to monitor in this scenario.

Reference Source:ArcGIS Enterprise documentation on system performance monitoring.

#### NEW QUESTION # 59

A GIS administrator is analyzing the usage statistics of ArcGIS Enterprise. The administrator needs to pull tabular statistics on various groups and users about the type of content that they produce and consume.

Which action should the administrator perform?

- A. Run usage reports in Portal for ArcGIS to determine the effect on the organization.
- B. Use ArcGIS Monitor to capture desired information over a period of time in a report.
- C. Open ArcGIS Server statistics to create a report for commonly used items.

**Answer: C**

#### NEW QUESTION # 60

.....

They are not forced to buy one format or the other to prepare for the Enterprise Administration Professional 2201 EAEP2201 exam. BraindumpsPrep designed Esri EAEP2201 exam preparation material in Enterprise Administration Professional 2201 EAEP2201 PDF and practice test. If you prefer PDF Dumps notes or practicing on the Enterprise Administration Professional 2201 EAEP2201 practice test software, use either.
