問題 #41
In which SAP Activate methodology phase do consultants configure business processes based on the information gathered in the Fit-to-Standard workshops?

- A. Realize
- B. Prepare
- C. Explore
- D. Deploy

答案：A

解題說明：
In the SAP Activate methodology, theRealizephase is where consultants configure business processes based on the information gathered during the Fit-to-Standard workshops. This phase involves setting up the system according to the agreed-upon requirements and preparing it for testing and deployment.
Option A: Deploy
This option is incorrect. The Deploy phase focuses on moving the configured and tested solution into the production environment and preparing for go-live.
Option B: Explore
This option is incorrect. The Explore phase includes conducting Fit-to-Standard workshops to identify how standard processes fit with the customer's requirements. However, detailed configuration is not performed in this phase.
Option C: Prepare
This option is incorrect. The Prepare phase involves initial planning and preparation activities but does not include configuring business processes.
Option D: Realize
This option is correct. During the Realize phase, consultants configure the system based on the outcomes of the Fit-to-Standard workshops, ensuring that the solution aligns with the customer's business processes and requirements.
SAP Learning
In summary, theRealizephase of the SAP Activate methodology is dedicated to configuring business processes as per the insights and decisions made during the Fit-to-Standard workshops, setting the foundation for subsequent testing and deployment activities.

問題 #42
What are the most important tasks in the Fit-to-Standard analysis and design workshops for a system conversion? Note: There are 2 correct answers to this question.

- A. Validating new functionality in the sandbox system
- B. Capturing configuration requirements for new functionality
- C. Capturing configuration requirements for the predefined solution
- D. Validating the predefined solution in the sandbox system

答案：C,D

問題 #43
Where do you document and prioritize requirements gathered from the Fit-to-Standard analysis workshops?

- A. SAP Cloud ALM
- B. SAP Solution Manager
- C. SAP Signavio Process Navigator
- D. Implementation Guide

答案：A

問題 #44
Which layer of SAP S/4HANA provides a universal language to read and process data across different applications?

- A. SAP Business Suite
- B. Core data services
- C. SAP Flori
- D. SAP HANA

答案：**B**

解題說明：

In SAP S/4HANA,Core Data Services (CDS)provide a universal language to define and consume data models across different applications. CDS enables the creation of semantically rich data models that can be consistently used in various scenarios, ensuring uniform data processing and retrieval.

Option A: SAP HANA

This option is incorrect. SAP HANA is the underlying in-memory database platform that stores and processes data but does not provide the universal modeling language.

Option B: SAP Business Suite

This option is incorrect. SAP Business Suite is a set of integrated business applications but does not offer a universal language for data modeling.

Option C: Core Data Services

This option is correct. CDS defines data models that can be used across various applications, providing a consistent and unified approach to data handling.

Option D: SAP Fiori

This option is incorrect. SAP Fiori is a user experience design

SAP S/4HANA's architecture includes layers that enable data processing and application functionality. The question asks for the layer providing a universal language to read and process data across applications. Let's analyze the options:

A: SAP HANA: This is the in-memory database layer powering SAP S/4HANA. While it provides the technical foundation for high-speed data processing, it does not offer a universal language for applications-it's a platform, not a data abstraction layer.

B: SAP Business Suite: This refers to the legacy ERP suite (e.g., ECC), not a layer of SAP S/4HANA. It is a collection of applications, not a data processing language or layer, making it incorrect.

C: Core Data Services (CDS): This is the correct answer. CDS is a semantic layer in SAP S/4HANA that provides a universal language to define, read, and process data across different applications. Built on the SAP HANA database, CDS uses a SQL-based syntax to create reusable data models (views) that simplify access to data for applications like SAP Fiori, analytics, and extensions. It ensures consistency and efficiency, a key feature of S/4HANA's architecture, including the Private Edition.

D: SAP Fiori: This is the user interface layer of SAP S/4HANA, providing a modern UX via apps. It consumes data but does not define or process it universally across applications, making it incorrect.

In conclusion, Core Data Services (CDS) is the layer in SAP S/4HANA that provides a universal language for data processing.
