## 免費下載的Salesforce MuleSoft-Integration-Associate考試資訊是行業領先 材料&有效的MuleSoft-Integration-Associate: Salesforce Certified MuleSoft Integration Associate Exam

Fast2test的專家團隊為了滿足以大部分IT人士的需求，他們利用自己的經驗和知識努力地研究過去的幾年的Salesforce MuleSoft-Integration-Associate 認證考試題目，如此，Fast2test的最新的Salesforce MuleSoft-Integration-Associate 的模擬測試題和答案就問世了。我們的Salesforce MuleSoft-Integration-Associate 模擬測試題及答案和真實考試的題目及答案有95%的相似性，通過Fast2test提供的測試題你可以100%通過考試。如果你沒有通過考試，Fast2test會全額退款給你。你也可以先在網上免費下載Fast2test提供的部分關於Salesforce MuleSoft-Integration-Associate 認證考試的練習題和答案作為嘗試，在你瞭解了我們的可靠性後，快將我們Fast2test提供的產品加入您的購物車吧。Fast2test將成就你的夢想。

## 最新的 Salesforce MuleSoft MuleSoft-Integration-Associate 免費考試真題 (Q38-Q43):

問題 #38

An organization needs to procure an enterprise software system to increase cross-selling opportunities and better track prospect data.

Which category of enterprise software has these core capabilities, when used for its typical and intended purpose?

- **A. Customer Relationship Management (CRM)**
- B. Supply Chain Management (SCM)
- C. Business-to-Business (B2B)
- D. IT Service Management (ITSM)

答案： A

解題說明：

Customer Relationship Management (CRM) systems are designed to manage an organization's interactions with current and potential customers. Here's a detailed explanation:

\* Core Capabilities:

\* Cross-Selling Opportunities: CRM systems track customer interactions, preferences, and purchasing history, helping businesses identify opportunities for cross-selling and upselling.

\* Prospect Data Management: CRM systems manage prospect information, track leads, and nurture relationships through the sales funnel.

\* Typical Use:

\* Sales Management: Helps sales teams manage and analyze customer interactions and data throughout the customer lifecycle.

\* Marketing Automation: Assists in automating marketing campaigns, segmenting customer lists, and tracking campaign effectiveness.

\* Customer Service: Provides tools for managing customer support cases, improving customer satisfaction, and retaining customers.

### 問題 #39

An organization's IT team must secure all of the internal APIs within an integration solution by using an API proxy to apply required authentication and authorization policies. Which integration technology, when used for its intended purpose should the team choose to meet these requirements if all other relevant factors are equal?

- A. Electronic Data Interchange (EDI)
- B. Robotic Process Automation (RPA)
- C. Integration Platform-as-a-Service (iPaaS)
- **D. API Management (APIM)**

答案： D

解題說明：

Securing internal APIs within an integration solution is critical for protecting sensitive data and ensuring proper access controls. The use of API proxies to apply authentication and authorization policies is a best practice in API security. Here's a detailed explanation:

\* API Management (APIM):

\* Purpose: API Management platforms are designed specifically to manage, secure, and monitor APIs. They provide tools for designing, publishing, securing, and analyzing APIs.

\* Key Features:

\* Security: APIM platforms offer robust security features such as OAuth, JWT, API keys, and IP whitelisting to authenticate and authorize API consumers.

\* API Proxies: They allow the creation of API proxies which act as intermediaries between the client and the backend service. This enables enforcing security policies without modifying the backend API.

\* Implementation:

\* Authentication and Authorization Policies: Using APIM, the IT team can easily configure policies for authentication (e.g., OAuth 2.0) and authorization to control access to APIs.

\* Policy Enforcement: These policies are enforced at the API proxy level, ensuring that only authenticated and authorized requests reach the backend services.

\* Monitoring and Analytics: APIM platforms provide detailed analytics and monitoring capabilities to track API usage, detect anomalies, and ensure compliance.

\* MuleSoft Documentation: API Security

\* API Management Overview: What is API Management

#### 問題 #40

According to MuleSoft which deployment characteristic applies to a microservices application architecture?

- A. Core business capabilities are encapsulated in a single deployable application
- B. All services of an application can be deployed together as single Java WAR file
- C. A deployment to enhance one capability requires a redeployment of all capabilities
- D. Services exist as independent deployment artifacts and can be scaled independently of other services

答案: D

解題說明:

Microservices architecture is designed to enhance flexibility, scalability, and maintainability by decomposing applications into small, independent services. Here's a detailed explanation:

\* Independent Deployment:

\* Definition: Each microservice is developed, deployed, and managed independently. This allows teams to work on different services without interfering with each other.

\* Scalability: Services can be scaled independently based on demand, improving resource utilization and system resilience.

\* Benefits:

\* Flexibility: Enhances the ability to update or scale specific parts of an application without affecting the whole system.

\* Resilience: Isolates failures to individual services, preventing cascading failures across the entire application.

\* Technology Diversity: Allows the use of different technologies and languages best suited for each service.

\* Benefits of Microservices: Microservices Characteristics

#### 問題 #41

What are two reasons why a typical MuleSoft customer favors a MuleSoft-hosted AnypointPlatform runtime plane over a customer-hosted runtime for its Mule application deployments? (Choose two.)

- A. Reduced time-to-market for the first application
- B. Reduced application latency
- C. Reduced IT operations effort
- D. increased application isolation
- E. Increased application throughput

答案: A,C

解題說明:

Choosing a MuleSoft-hosted Anypoint Platform runtime plane offers several advantages, particularly in terms of deployment efficiency and operational management. Here's a detailed explanation of the selected reasons:

\* Reduced Time-to-Market for the First Application:

\* Pre-Configured Environment: MuleSoft-hosted Anypoint Platform provides a ready-to-use environment, which accelerates the deployment process.

\* Ease of Use: Developers can quickly set up and deploy applications without the need for extensive infrastructure setup and configuration.

\* Reduced IT Operations Effort:

\* Managed Services: MuleSoft handles the infrastructure management, including updates, scaling, and maintenance, reducing the operational burden on the IT team.

\* Focus on Development: IT teams can focus on developing and optimizing applications rather than managing runtime environments.

#### 問題 #42

What is a defining characteristic of an Integration-Platform-as-a-Service (iPaaS)?

- A. Cloud-based
- B. No-code
- C. On-premises
- D. Code-first

答案： A

解題說明：

An Integration-Platform-as-a-Service (iPaaS) is characterized by being a cloud-based solution that provides tools to develop, execute, and manage integration flows connecting multiple applications and data sources.

Here's a detailed explanation:

\* iPaaS:

\* Definition: A suite of cloud services enabling the development, execution, and governance of integration flows.

\* Deployment: Delivered and managed entirely in the cloud, offering high availability and scalability.

\* Characteristics:

\* Cloud-based: The platform is hosted on the cloud, allowing users to access and utilize the integration tools from anywhere with an internet connection.

\* Managed Services: iPaaS providers handle infrastructure maintenance, updates, and security, freeing users to focus on integration development.

\* Scalability: Easily scales to meet the demands of growing businesses without requiring additional on-premises infrastructure.
