L5M10 Valid Exam Syllabus - Updated L5M10 Test Cram

Our exam prep material is famous among L5M10 exam candidates which help to polish the knowledge required to pass the CIPS L5M10 exam. The certification is organized by L5M10 internationally. Our CIPS L5M10 exam questions are the most cost-effective as we understand that you need low-cost material but are authentic and updated. ITCertMagic provides its CIPS L5M10 Exam Questions in three forms, one is PDF eBook, the second is practice exam software for Windows-based systems, and the third is an online practice test.

CIPS L5M10 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Analyse the Role and Activities of Logistics Management: This section of the exam measures the skills of Logistics Managers and covers the essential concepts, functions, and strategic importance of logistics within modern supply chains. It explains what logistics is, how its key elements work together—such as transportation, warehousing, inventory, packaging, information flow, and security—and how these components support procurement, production, distribution, after-sales processes, and product disposal. The section explores how logistics integrates with broader supply chain management and introduces the idea of total logistics and total cost thinking, showing how multimodal transport and pipeline inventory contribute to efficiency. Candidates must understand how logistics creates competitive advantage by aligning operations with business strategy, managing customer service levels, measuring service quality, and recognizing its financial impact. This heading also evaluates the increasing role of technology in logistics, including barcoding, RFID, e-fulfilment systems, warehouse management systems, automated data capture, and the integration of digital tools across the logistics network.
Topic 2	<ul style="list-style-type: none"> • Understand Capacity Planning and Control in Logistics Management: This section of the exam measures the skills of Operations Planners and focuses on the techniques and systems used to manage capacity, demand, and resource planning across logistics activities. It explains how organizations balance planning with real-time control, adjust to fluctuating demand, and schedule workloads effectively. Candidates are expected to understand capacity concepts, constraints, demand forecasting, capacity measurement, and different planning approaches such as level planning, chase demand strategies, and demand management methods. The section also examines the use of technology in capacity planning, particularly Materials Requirements Planning (MRP), MRP II, ERP systems, master production scheduling, inventory data, and bills of materials, while recognizing the limitations of these tools. Finally, it covers the role of reverse logistics, emphasizing the handling of customer returns, the development of return policies, and how returned items are reintegrated into the supply chain.

CIPS Logistics Management Sample Questions (Q57-Q62):

NEW QUESTION # 57

Omar is forecasting future demand. Normally he uses three years of sales data, but this year he's been asked to include data back to 2004. Which forecasting technique is he using?

- A. Exponential smoothing technique
- B. Time series method
- C. Moving average technique
- D. Simple linear regression

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Exponential smoothing gives progressively less weight to older data but uses the entire historical dataset to forecast future demand. Moving averages, by contrast, use a fixed number of recent periods. (Reference: CIPS L5M10 Study Guide, Demand forecasting methods, p. 157)

NEW QUESTION # 58

Which of the following are advantages of introducing a Materials Requirements Planning (MRP) system to a business? Select TWO.

- A. Reduced inventory costs
- B. Less time spent repairing machines
- C. Better customer service
- D. More agile supply chain

Answer: A,C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

MRP systems synchronise material requirements with production schedules, reducing unnecessary inventory and ensuring timely delivery—thus improving customer service and reducing carrying costs. MRP does not directly enhance machine repair or agility

(which are Lean/ERP benefits).

(Reference: CIPS L5M10 Study Guide, Advantages of MRP systems, p. 188)

NEW QUESTION # 59

Which pieces of information would you require to calculate aBOM exposure? Select TWO

- A. Current inventory levels
- B. Lead-time of the materials
- C. Price of the materials
- D. Materials required to complete an order

Answer: A,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

ABOM exposure determines net requirements by expanding the Bill of Materials for an order and offsetting it against current inventory/receipts to find what must be procured or made. Prices and lead times are relevant for scheduling/costing, not for the netting calculation itself. (CIPS L5M10 Study Guide, p. 182)

NEW QUESTION # 60

"Pick and Pack" is a warehouse management system (WMS) functionality detailing how items should be picked to fulfil customer orders. Which of the following are types of pick paths that can be programmed into a WMS? Select THREE

- A. Zone picking
- B. Line picking
- C. Rotation picking
- D. Wave picking
- E. Batch picking

Answer: A,D,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Common WMS pick-path/strategy types include zone picking (pickers confined to zones), wave picking (releasing picks in waves), and batch picking (multiple orders picked in one pass). "Line picking" and "rotation picking" are not standard WMS pick-path terms in the context used here. (Reference: CIPS L5M10 Study Guide, WMS and "pick & pack" functions, p. 88; Inventory picking strategies, LO 1.1)

NEW QUESTION # 61

In transportation terminology, what type of cargo would be considered "less than carload" (LTC)?

- A. A shipment that fills half a rail carriage in volume
- B. A shipment that is less than a full truckload
- C. Inventory that is worth less than the price of an average car
- D. A small box of components that would fit on the back seat of a car

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

"Less than carload" refers to rail freight shipments smaller than a full railcar load (i.e., not filling an entire rail carriage). The term relates to railway "cars," not road vehicles. (Reference: CIPS L5M10 Study Guide, transport terminology-LTC/LCL/FTL, p. 6)

NEW QUESTION # 62
