NEW QUESTION # 317

You are evaluating the effect of the application security groups on the network communication between the virtual machines in Sub2. For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: No. VM4 is in Subnet13 which has NSG3 attached to it.

VM1 is in ASG1. NSG3 would only allow ICMP pings from ASG2 but not ASG1. Only TCP traffic is allowed from ASG1.

NSG3 has the inbound security rules shown in the following table.

Box 2: Yes.

VM2 is in ASG2. Any protocol is allowed from ASG2 so ICMP ping would be allowed.

Box3. VM1 is in ASG1. TCP traffic is allowed from ASG1 so VM1 could connect to the web server as connections to the web server would be on ports TCP 80 or TCP 443.

NEW QUESTION # 318

You have an Azure subscription that contains the resources shown in the following table.

You plan to deploy the virtual machines shown in the following table.

You need to assign managed identities to the virtual machines. The solution must meet the following requirements:

- * Assign each virtual machine the required roles.

- * Use the principle of least privilege.

What is the minimum number of managed identities required?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

We have two different sets of required permissions. VM1 and VM2 have the same permission requirements.

VM3 and VM4 have the same permission requirements.

A user-assigned managed identity can be assigned to one or many resources. By using user-assigned managed identities, we can create just two managed identities: one with the permission requirements for VM1 and VM2 and the other with the permission requirements for VM3 and VM4.
