Fortinet FCP - FortiAnalyzer 7.4 Administrator Sample Questions (Q126-Q131):

NEW QUESTION # 126
Which statement correctly describes RAID 10 (1+0) on FortiAnalyzer?

- A. A configuration with four disks, each with 2 TB of capacity, provides a total space of 2 TB.
- B. A configuration with four disks, each with 2 TB of capacity, provides a total space of 4 TB.B It combines mirroring striping and distributed parity to provide performance and fault tolerance
- C. It uses striping to provide performance and fault tolerance.

Answer: B

Explanation:
RAID 10 combines mirroring (RAID 1) and striping (RAID 0). In a RAID 10 setup with four disks, data is mirrored across two pairs of disks, and those pairs are striped for performance. This results in improved performance and fault tolerance, but the total usable storage is 50% of the total raw storage, meaning four 2 TB disks provide 4 TB of usable space.

What is Log Insert Lag Time on FortiAnalyzer?

- B. The amount of time that passes between the time a log was received and when it was indexed on FortiAnalyzer.

NEW QUESTION # 128
Which statement is true about the communication between FortiGate high availability (HA) clusters and FortiAnalyzer?

- A. FortiAnalyzer distinguishes each cluster member by its MAC address.
- B. Only the primary device in the cluster communicates with FortiAnalyzer.
- C. You must add the device lo the cluster first, and then registers the cluster with FortiAnalyzer.
- D. Each cluster member sends its logs directly to FortiAnalyzer.

Answer: B

Explanation:
In a FortiGate high availability (HA) cluster, only the primary device sends its logs to the FortiAnalyzer.
This is to ensure that logs are not duplicated between the primary and secondary devices in the cluster.
The configuration of the FortiAnalyzer server on the FortiGate is such that the HA primary device is set as the server that forwards the logs.
