AWS-Solutions-Associate Practice Exam & AWS-Solutions-Associate Best Questions & AWS-Solutions-Associate Certification Training

BONUS!!! Download part of Actual4Dumps AWS-Solutions-Associate dumps for free: https://drive.google.com/open?id=1oMRPeC0_jKbta234wclNkYflFuQggV8T

In this cut-throat competitive world of Amazon, the Amazon AWS-Solutions-Associate certification is the most desired one. But what creates an obstacle in the way of the aspirants of the AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Associate) certificate is their failure to find up-to-date, unique, and reliable AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Associate) practice material to succeed in passing the Amazon AWS-Solutions-Associate certification exam.

The AWS Certified Solutions Architect - Associate certification is essential for professionals looking to advance their careers in cloud computing. It is a globally recognized certification that demonstrates an individual's expertise in designing, deploying, and managing AWS-based applications. AWS Certified Solutions Architect - Associate (SAA-C03) certification also validates a candidate's knowledge of AWS services, security, and compliance.

Understanding functional and technical aspects of AWS Solutions Associate Design for New Solutions

The following will be dicussed in **AMAZON AWS SOLUTIONS ASSOCIATE exam dumps**:

- Identifying elastic and scalable compute solutions for an application

Selecting the relevant instance(s) based on compute, storage, and networking needs, choosing the appropriate associate and services that scale to satisfy performance requirements, and identifying metrics to observe the performance of the solution

- Selecting high-performing and scalable storage solutions for an application

Choosing a storage service and configuration that satisfies performance requirements and determining storage services that can scale to accommodate anticipated needs

- Selecting high-performing networking solutions for an application

Selecting suitable AWS connectivity prospects to meet performance requirements, selecting relevant characteristics to optimize connectivity to AWS public services, determining an edge caching strategy to provide performance benefits, and selecting relevant data transfer service for migration and/or ingestion

- Choosing high-performing database solutions for an application

Choosing a relevant database scaling strategy, determining when database caching is needed for performance enhancement, and choosing a proper database service to meet performance requirements

Amazon AWS-Solutions-Architect-Associate (AWS Certified Solutions Architect - Associate (SAA-C02)) Certification Exam is a

highly sought-after certification for professionals who want to demonstrate their skills in designing and deploying scalable, highly available, and fault-tolerant systems on AWS. The SAA-C02 exam is designed for individuals who have experience in designing and deploying scalable and highly available systems on AWS. AWS-Solutions-Associate Exam Tests the candidate's knowledge of AWS services, design patterns, and architectural best practices.

AWS-Solutions-Associate Valid Test Testking | AWS-Solutions-Associate Reliable Exam Topics

With the help of the Amazon AWS-Solutions-Associate brain dumps and preparation material provided by Actual4Dumps, you will be able to get Amazon AWS Certified Solutions Architect certified at the first attempt. Our Amazon experts have curated an amazing AWS-Solutions-Associate exam guide for passing the AWS-Solutions-Associate Exam. You can get the desired outcome by preparing yourself from the AWS-Solutions-Associate exam dumps material provided by Actual4Dumps. We frequently update our AWS-Solutions-Associate exam preparation material to reflect the latest changes in the AWS-Solutions-Associate exam syllabus.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q74-Q79):

NEW QUESTION # 74
A Solutions Architect is designing a ride-sharing application. The application needs consistent and single-digit millisecond latency In addition the application must integrate with a highly scalable and fully managed database service to track GPS coordinates and user data for all nodes.
Which database service should the Solutions Architect use to meet these performance requirements?

- A. Amazon Aurora
- B. Amazon RDS
- C. Amazon Redshift
- D. Amazon DynamoDB

Answer: D

NEW QUESTION # 75
A company wants its public web application to run on Amazon EC2 instances in an Auto Scaling group behind an Application Load Balancer (ALB). The application must use a publicly trusted SSL certificate.
Which solution will meet these requirements MOST cost-effectively?

- A. Provision a public SSL/TLS certificate through AWS Certificate Manager (ACM). Configure the new certificate on the HTTPS listener for the ALB.
- B. Create a self-signed certificate on one of the EC2 instances in the Auto Scaling group. Export the certificate, and configure it on the HTTPS listener for the ALB.
- C. Deploy an EC2-hosted certificate authority (CA). Import a trusted root certificate. Issue a new SSL/TLS certificate. Configure the new certificate on the HTTPS listener for the ALB.
- D. Use AWS Certificate Manager Private Certificate Authonty to issue an SSL/TLS certificate. Configure the new certificate on the HTTPS listener for the ALB.

Answer: A

NEW QUESTION # 76
A user is running a webserver on EC2. The user wants to receive the SMS when the EC2 instance utilization is above the threshold limit. Which AWS services should the user configure in this case?

- A. AWS CloudWatch + AWS SNS.
- B. AWS CloudWatch + AWS SQS.
- C. AWS EC2 + AWS Cloudwatch.

- D. AWS CloudWatch + AWS SES.

Answer: A

Explanation:
Amazon SNS makes it simple and cost-effective to push to mobile devices, such as iPhone, iPad, Android,
Kindle Fire, and internet connected smart devices, as well as pushing to other distributed services. In this case, the user can
configure that Cloudwatch sends an alarm on when the threshold is crossed to SNS which will trigger an SMS.
Reference: http://aws.amazon.com/sns/

NEW QUESTION # 77
A company wants to protect resources that the company hosts on AWS, including Application Load Balancers and Amazon
CloudFront distributions.
The company wants an AWS service that can provide near real-time visibility into attacks on the company's resources. The service
must also have a dedicated AWS team to assist with DDoS attacks.
Which AWS service will meet these requirements?

- A. AWS Shield Standard
- B. AWS Shield Advanced
- C. AWS WAF
- D. Amazon Macie

Answer: B

Explanation:
AWS Shield Advanced provides:
Advanced DDoS detection and mitigation
24/7 access to the AWS DDoS Response Team (DRT)
Real-time metrics and alerts via CloudWatch
Integrated with CloudFront, ALB, Route 53, and Global Accelerator
"Shield Advanced provides enhanced detection and mitigation for more sophisticated DDoS attacks and gives you access to the
AWS DDoS Response Team (DRT)."
- AWS Shield Advanced Overview
Incorrect Options:
A (AWS WAF): For application-layer filtering only.
B (Shield Standard): Basic protection, no DRT or attack visibility.
C (Macie): Used for discovering sensitive data in S3, unrelated to DDoS.

AWS Shield Advanced
Shield vs Shield Advanced

NEW QUESTION # 78
A company is designing an event-driven order processing system Each order requires multiple validation steps after the order is
created. An independent AWS Lambda function performs each validation step. Each validation step is independent from the other
validation steps Individual validation steps need only a subset of the order event information.
The company wants to ensure that each validation step Lambda function has access to only the information from the order event that
the function requires The components of the order processing system should be loosely coupled to accommodate future business
changes.
Which solution will meet these requirements?

- A. Create an Amazon EventBridge event bus. Create an event rule for each validation step Configure the input transformer to
  send only the required data to each target validation step Lambda function.
- B. Create an Amazon Simple Notification Service {Amazon SNS) topic. Subscribe the validation step Lambda functions to
  the SNS topic. Use message body filtering to send only the required data to each subscribed Lambda function.
- C. Create an Amazon Simple Queue Service {Amazon SQS) queue Create a new Lambda function to subscribe to the SQS
  queue and to transform the order data to the format that each validation step requires. Use the new Lambda function to
  perform synchronous invocations of the validation step Lambda functions in parallel on separate threads.
- D. Create an Amazon Simple Queue Service (Amazon SQS> queue for each validation step. Create a new Lambda function
  to transform the order data to the format that each validation step requires and to publish the messages to the appropriate

SQS queues Subscribe each validation step Lambda function to its corresponding SQS queue

Answer: A

Explanation:
Understanding the Requirement: The order processing system requires multiple independent validation steps, each handled by separate Lambda functions, with each function accessing only the subset of order information it needs. The system should be loosely coupled to accommodate future changes.
Analysis of Options:
Amazon SQS with a new Lambda function for transformation: This involves additional complexity in creating and managing multiple SQS queues and an extra Lambda function for data transformation.
Amazon SNS with message filtering: While SNS supports message filtering, it is more suited for pub/sub messaging patterns rather than event-driven processing requiring fine-grained control over the data sent to each function.
Amazon EventBridge with input transformers: EventBridge is designed for event-driven architectures, allowing for fine-grained control with input transformers that can modify and filter the event data sent to each target Lambda function, ensuring each function receives only the necessary information.
SQS with synchronous Lambda invocations: This approach adds unnecessary complexity with synchronous invocations and is not ideal for an event-driven, loosely coupled architecture.
Best Solution:
Amazon EventBridge with input transformers: This option provides the most flexible, scalable, and loosely coupled architecture, enabling each Lambda function to receive only the required subset of data.

NEW QUESTION # 79

......

There are a lot of experts and professors in or company in the field. In order to meet the demands of all people, these excellent experts and professors from our company have been working day and night. They tried their best to design the best AWS-Solutions-Associate certification training dumps from our company for all people. By our study materials, all people can prepare for their AWS-Solutions-Associate exam in the more efficient method. We can guarantee that our study materials will be suitable for all people and meet the demands of all people, including students, workers and housewives and so on. If you decide to buy and use the AWS-Solutions-Associate Training Materials from our company with dedication on and enthusiasm step and step, it will be very easy for you to pass the exam without doubt. We sincerely hope that you can achieve your dream in the near future by the AWS-Solutions-Associate latest questions of our company.
