Drupal-Site-Builder Test Dump - Online Drupal-Site-Builder Version

As far as we know, in the advanced development of electronic technology, lifelong learning has become more accessible, which means everyone has opportunities to achieve their own value and life dream though some ways such as the Drupal-Site-Builder certification. With over a decade's endeavor, our Drupal-Site-Builder practice materials successfully become the most reliable products in the industry. There is a great deal of advantages of our Drupal-Site-Builder exam questions you can spare some time to get to know.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q41-Q46):

NEW QUESTION # 41

You installed a new site using the Spanish language. You added new fields to article content type alongside the default fields. The custom fields labels are in Spanish.

Which of the following statements is true when you add the French language to your site?

- **A. Drupal will handle translation of content configuration for built-in fields automatically. Custom fields will have to be translated manually.**
- B. Drupal will handle translations of both built in and custom field configurations to French automatically.
- C. All content configurations should be translated to French manually.
- D. Drupal will handle translation of content configuration for custom fields automatically. Built-in fields will need to be translated manually.

Answer: A

Explanation:

Drupal distinguishes between interface text and configuration text . The built-in labels and other text that come from Drupal core, modules, and themes are handled by the Interface Translation system, and Drupal can download those translations for added languages. The Drupal User Guide explains that this built-in text is typically translated by downloading available translations rather than translating it yourself.

By contrast, field labels are configuration. Drupal's multilingual documentation says that configuration text includes items such as labels for fields in your content types , and the Configuration Translation module provides the interface to translate that configuration into other languages. It also specifically lists Content fields as translatable configuration elements. That means field labels you created yourself in Spanish are not automatically translated into French just because French is added; they must be translated through configuration translation.

So, when French is added, Drupal can automatically provide translations for built-in field/interface text where translations exist, but custom field configuration labels still require manual translation . Therefore, option C is the correct answer.

NEW QUESTION # 42

Your content team needs to use < div > tags in the content of some articles. The default configuration does not allow for this. How can you reconfigure the site to support this request? (Select 2 options)

- A. Enable the site theme's "structural HTML" setting.
- B. Reconfigure the site's permissions; grant content editors the "Use advanced HTML" permission.
- C. Reconfigure the "Basic HTML" text format to allow the use of < div > tags.
- D. Reconfigure the page's body field to use the "Full HTML" text format.

Answer: C,D

Explanation:

Drupal controls HTML markup through text formats and filters . The official User Guide explains that text formats such as Basic HTML and Full HTML determine which tags are allowed, and these formats exist specifically to protect the site from unsafe markup such as XSS. Because of that, if editors need to use < div > tags, one valid solution is to configure the content so it can use the Full HTML text format, which is the most permissive core format. Drupal also supports restricting or allowing which text formats are available on a formatted text field, including the Body field.

Another valid solution is to edit the Basic HTML text format and add < div > to the list of allowed HTML tags. Drupal's text format configuration page explicitly allows administrators to change the Allowed HTML tags for Basic HTML. That makes option C correct as well. Option B is incorrect because Drupal does not use a permission named "Use advanced HTML"; permissions are tied to specific text formats. Option D is incorrect because theme settings do not control which tags are allowed in editor input.

NEW QUESTION # 43

You wish to display the "Recent content" block in the sidebar region on all the article pages only. The block should be hidden on all other pages.

How do you accomplish this?

- A. Check the "show recent content" option in the site branding block, and set it to be visible only for Article Content type.
- B. Edit Article Content type and check the "show recent content" option.
- C. In the Block layout settings, add the Recent content block to the Sidebar section and set the block to be visible for the "Article" Content type.
- D. Add the Recent content block to all pages, and hide it from non-Article pages using CSS.

Answer: C

Explanation:

Drupal 10 and Drupal 11 provide block visibility conditions that allow administrators to control where blocks appear. According to Drupal's block system documentation, when placing a block through Structure # Block layout , you can configure visibility based on content types, pages, roles, or request paths .

To meet the requirement of showing the "Recent content" block only on Article pages, the correct approach is to place the block in the Sidebar region and configure its visibility condition to Content types # Article . This ensures the block is displayed only when viewing nodes of the Article content type and hidden elsewhere.

Option A is incorrect because using CSS to hide blocks is not a proper Drupal configuration and still renders the block unnecessarily. Options B and C are invalid because Drupal does not provide such settings in content type or site branding configurations.

Thus, using block visibility settings tied to the Article content type is the correct and recommended method in Drupal site building.

NEW QUESTION # 44

Your website has a content type named Hotel with a Taxonomy reference field for Landmarks vocabulary. You want to create a view to list all the hotels filtered by landmarks as a contextual filter. How will you pass the term name in the URL for the contextual filter?

- A. Add Landmarks vocabulary as a relationship and then add Landmarks vocabulary as a contextual filter.
- **B. Add Landmarks vocabulary as a contextual filter and pass term name as a contextual filter.**
- C. Add Landmarks vocabulary both as an exposed filter and contextual filter.
- D. Add Landmarks vocabulary as an exposed filter pass term name as the filter value.

Answer: B

Explanation:

In Drupal 10 and Drupal 11, Views contextual filters are used to dynamically filter content based on values passed through the URL. When filtering content by taxonomy (such as Landmarks), you configure a contextual filter using the taxonomy term field associated with the content type.

To pass a value like a term name in the URL, you must configure the contextual filter to accept term identifiers such as term ID or term name. Drupal Views allows validation and transformation of contextual input, including using the taxonomy term name via settings like "Provide default value" or "Specify validation criteria." This matches option B.

Option A is incorrect because exposed filters rely on user input via UI forms, not URL path arguments.

Option C is unnecessary duplication and not aligned with best practices. Option D is not required because taxonomy reference fields already provide the necessary relationship internally for filtering; explicitly adding a relationship is only needed in more complex multi-entity scenarios.

Therefore, the correct approach is to use a contextual filter configured to accept the taxonomy term (including term name) via the URL, making option B correct.

NEW QUESTION # 45

You have created a new Article node with a title, an image and a body field. Your site is configured to use Drupal's core search. If you search for a phrase which is used in your new article, the article is not returned in the search results. Search is otherwise working correctly.

Why is your article not appearing in the search results?

- A. Drupal core search does not work very well, and you should use a contributed module for search instead.
- B. You did not check the "Add to search index" checkbox when creating your article.
- **C. Cron has not run since you added the article, so Drupal has not indexed the new article yet.**
- D. The core search module must be configured to recognize the search term.

Answer: C

Explanation:

Drupal core search does not index newly created or updated content immediately in the default workflow.

According to the official Drupal core Search module overview, content actions such as creating, editing, or deleting content automatically mark the affected content items for indexing or reindexing at the next cron run.

Until cron runs, the new or changed content is not updated in the search index, so a newly created article may not appear in search results even though search is otherwise functioning correctly.

This makes option C the correct answer. The other options do not match Drupal core behavior. There is no normal site-building step where you configure core search to "recognize" a specific term, and Drupal does not provide an "Add to search index" checkbox when creating an article in core search. Also, while contributed search solutions exist, the question states that Drupal core search is already working correctly, so the missing result is best explained by indexing timing, not by a flaw requiring another module. Drupal's search documentation is explicit that cron is responsible for updating the index after content changes.

NEW QUESTION # 46

.....

The prominent benefits of Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 certification exam are validation of skills, updated knowledge, more career opportunities, instant rise in salary, and advancement of the career. Obviously, every serious professional wants to gain all these advantages. With the Acquia Drupal-Site-Builder Certification Exam, you can achieve this goal

nicely and quickly.

Drupal-Site-Builder Test Dump: https://www.itcertking.com/Drupal-Site-Builder_exam.html

This relieves any sort of anxiety in the candidate's mind before the purchase of Drupal-Site-Builder Test Dump - Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 certification exam preparation material, Acquia Cert Drupal-Site-Builder Exam With the purchase of this pack, you will also get free demo questions dumps, Our experts update the Drupal-Site-Builder Test Dump - Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 guide torrent each day and provide the latest update to the client, Our Drupal-Site-Builder prepare questions are suitable for people of any culture level.

In the Compare view, the Select image is on the left, and the Candidate Cert Drupal-Site-Builder Exam image is on the right, The worst practice is the most common one: waiting to test until the site is done and ready to launch.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 exam prep material & Drupal-Site-Builder useful exam pdf & Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 exam practice questions

This relieves any sort of anxiety in the candidate's mind before the purchase of Drupal-Site-Builder of Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 certification exam preparation material, With the purchase of this pack, you will also get free demo questions dumps.

Our experts update the Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 guide torrent each day and provide the latest update to the client, Our Drupal-Site-Builder prepare questions are suitable for people of any culture level.

You can totally depend on the Drupal-Site-Builder guide files of our company when you are preparing for the exam.
