

# New SPLK-2003 Test Vce & SPLK-2003 Updated Testkings

BTW, DOWNLOAD part of Exams4Collection SPLK-2003 dumps from Cloud Storage: <https://drive.google.com/open?id=1SCIM3q34ubAQfH9AramAIPVSqpFIv9CY>

Exams4Collection provides with actual Splunk SPLK-2003 exam dumps in PDF format. You can easily download and use SPLK-2003 PDF dumps on laptops, tablets, and smartphones. Our real SPLK-2003 dumps PDF is useful for applicants who don't have enough time to prepare for the examination. If you are a busy individual, you can use SPLK-2003 Pdf Dumps on the go and save time.

Obtaining the SPLK-2003 certification demonstrates that an individual has the knowledge and skills required to administer the Splunk Phantom platform. Splunk Phantom Certified Admin certification is highly valued by employers and can lead to better job opportunities and higher salaries. It also validates an individual's expertise in SOAR and cybersecurity automation, which are in high demand in today's rapidly evolving cybersecurity landscape.

Splunk SPLK-2003 certification exam is designed for those who want to become a certified Splunk Phantom administrator. Splunk Phantom Certified Admin certification is awarded by Splunk, which is a software company that specializes in big data analysis. Splunk Phantom is a popular platform for automating security operations and incident response. Upon passing the SPLK-2003 Exam, candidates will have demonstrated their ability to configure, manage, and troubleshoot Splunk Phantom.

## Get Updated Splunk SPLK-2003 Exam Questions (2026)

Our Software version of SPLK-2003 study materials has the advantage of simulating the real exam. The timing function in this Software of our SPLK-2003 guide questions helps them adjust their speeds to answer the questions and the function of stimulating the SPLK-2003 Exam can help the learners adapt themselves to the atmosphere and pace of the exam. Thus the learners can master our SPLK-2003 practice engine fast, conveniently and efficiently.

Splunk SPLK-2003 Exam is an essential certification for IT professionals who want to demonstrate their expertise in administering Splunk Phantom. Splunk Phantom Certified Admin certification can help individuals advance their careers, increase their earning potential, and stand out in a competitive job market. By preparing for the exam and passing it, candidates can prove that they have the knowledge and skills to manage and maintain Splunk Phantom effectively.

## Splunk Phantom Certified Admin Sample Questions (Q59-Q64):

### NEW QUESTION # 59

What do assets provide for app functionality?

- A. Assets provide firewall, network, and data sources needed to run actions.
- **B. Assets provide location, credentials, and other parameters needed to run actions.**
- C. Assets provide Python code, REST API, and other capabilities needed to run actions.
- D. Assets provide hostnames, passwords, and other artifacts needed to run actions.

**Answer: B**

Explanation:

The correct answer is A because assets provide location, credentials, and other parameters needed to run actions. Assets are configurations that define how Phantom connects to external systems or devices, such as firewalls, endpoints, or threat intelligence sources. Assets specify the app, the IP address or hostname, the username and password, and any other settings required to run actions on the target system or device. The answer B is incorrect because assets do not provide hostnames, passwords, and other artifacts needed to run actions, which are data objects that can be created or retrieved by playbooks. The answer C is incorrect because assets do not provide Python code, REST API, and other capabilities needed to run actions, which are provided by apps. The answer D is incorrect because assets do not provide firewall, network, and data sources needed to run actions, which are external systems or devices that can be connected to by assets.

Reference: Splunk SOAR Admin Guide, page 45. Assets in Splunk Phantom are configurations that contain the necessary information for apps to connect to external systems and services. This information can include IP addresses, domain names, credentials like usernames and passwords, and other necessary parameters such as API keys or tokens. These parameters enable the apps to perform actions like running queries, executing commands, or gathering data. Assets do not provide the actual Python code, REST API capabilities, or network infrastructure; they are the bridge between the apps and the external systems with the configuration data needed for successful communication and action execution

### NEW QUESTION # 60

Phantom supports multiple user authentication methods such as LDAP and SAML2. What other user authentication method is supported?

- A. SAML3
- **B. PIV/CAC**
- C. Biometrics
- D. OpenID

**Answer: B**

Explanation:

Explanation

The correct answer is B because Phantom supports PIV/CAC as another user authentication method besides LDAP and SAML2. PIV/CAC stands for Personal Identity Verification (PIV) or Common Access Card (CAC) and is a smart card that can be used to authenticate users to Phantom. SAML3 is not a valid authentication method. Biometrics and OpenID are not supported by Phantom. See Splunk SOAR Documentation for more details.

### NEW QUESTION # 61

Which Phantom API command is used to create a custom list?

- A. phantom.create\_list()
- B. phantom.include\_list()
- **C. phantom.add\_list()**
- D. phantom.new\_list()

**Answer: C**

### NEW QUESTION # 62

When is using decision blocks most useful?

- A. When processing different data in parallel.
- **B. When selecting one (or zero) possible paths in the playbook.**
- C. When modifying downstream data in one or more paths in the playbook.
- D. When evaluating complex, multi-value results or artifacts.

**Answer: B**

Explanation:

Decision blocks are most useful when selecting one (or zero) possible paths in the playbook.

Decision blocks allow the user to define one or more conditions based on action results, artifacts, or custom expressions, and execute the corresponding path if the condition is met. If none of the conditions are met, the playbook execution ends. Decision

blocks are not used for processing different data in parallel, evaluating complex, multi-value results or artifacts, or modifying downstream data in one or more paths in the playbook. Decision blocks within Splunk Phantom playbooks are used to control the flow of execution based on certain criteria. They are most useful when you need to select one or potentially no paths for the playbook to follow, based on the evaluation of specified conditions. This is akin to an if-else or switch-case logic in programming where depending on the conditions met, a particular path is chosen for further actions. Decision blocks evaluate the data and direct the playbook to different paths accordingly, making them a fundamental component for creating dynamic and responsive automation workflows.

### NEW QUESTION # 63

Which two playbook blocks can discern which path in the playbook to take next?

- A. Filter and decision blocks.
- B. Decision and action blocks.
- C. Filter and prompt blocks.
- D. Prompt and decision blocks.

**Answer: D**

Explanation:

In Splunk SOAR playbooks, the blocks that can discern which path to take next are the prompt and decision blocks. The prompt block allows the playbook to pause and wait for user input, which can then determine the subsequent path of execution based on the response provided.

The decision block evaluates conditions based on data within the playbook and directs the flow to different paths accordingly.

The decision block is used to change the flow of artifacts by performing IF, ELSE IF, or ELSE functions. When an artifact meets a True condition, it is passed downstream to the corresponding block in the playbook flow. The prompt block, on the other hand, interacts with users to make decisions during playbook execution, which can also influence the direction of the playbook's flow.

### NEW QUESTION # 64
