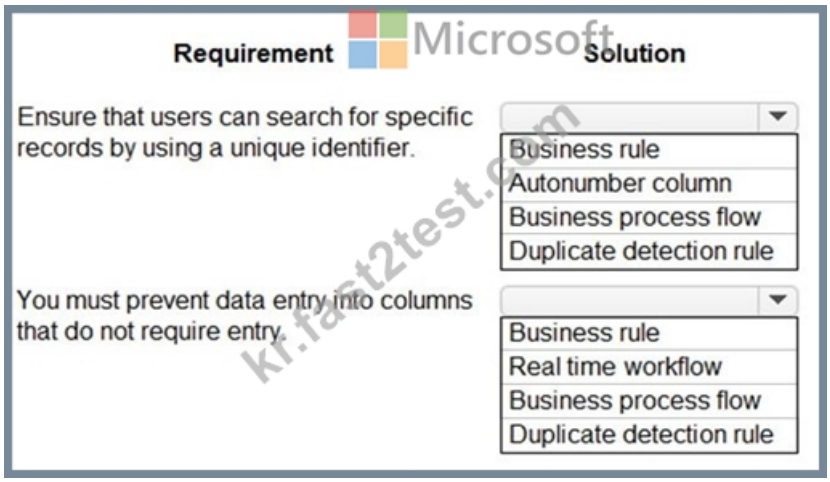
PL-600 Dump & PL-600최신버전 덤프공부문제

Microsoft인증 PL-600시험을 패스하는 지름길은Fast2test에서 연구제작한 Microsoft 인증PL-600시험대비 덤프를 마련하여 충분한 시험준비를 하는것입니다. 덤프는 Microsoft 인증PL-600시험의 모든 범위가 포함되어 있어 시험적중율이 높습니다. Microsoft 인증PL-600시험패는 바로 눈앞에 있습니다. 링크를 클릭하시고Fast2test의Microsoft 인증PL-600시험대비 덤프를 장바구니에 담고 결제마친후 덤프를 받아 공부하는것입니다.

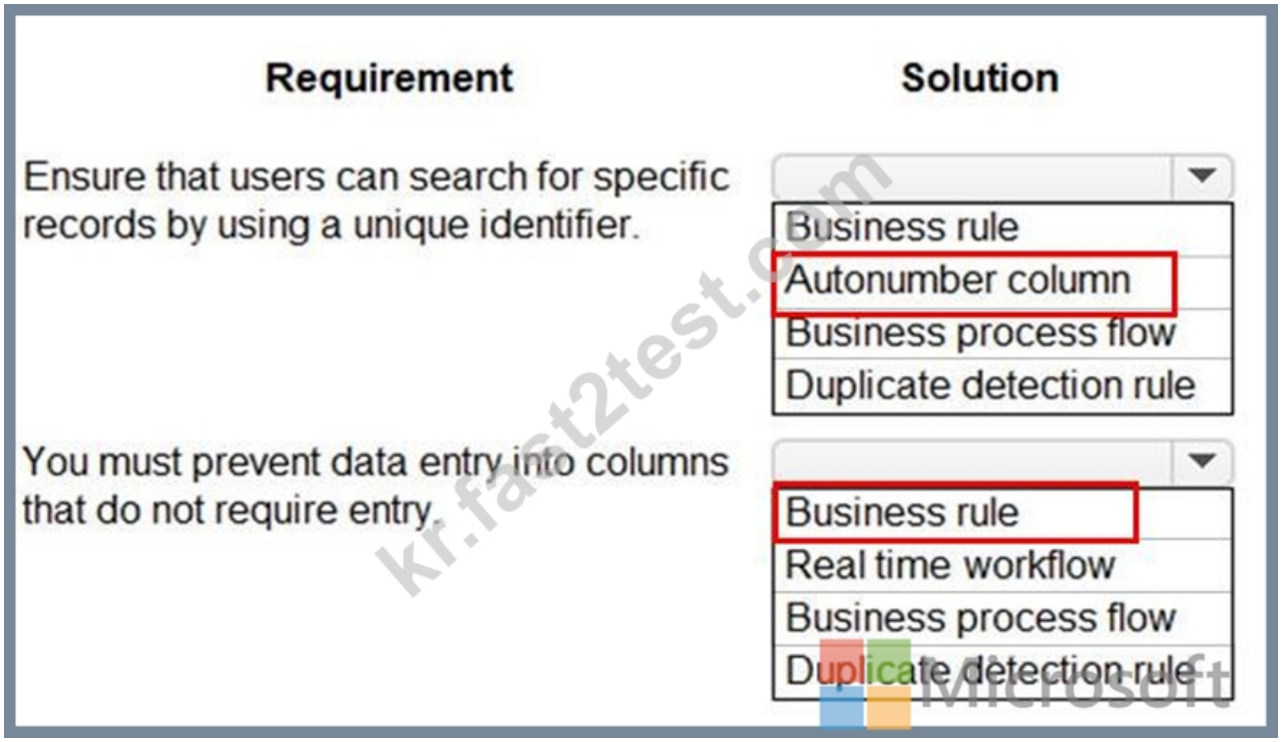
최신 Microsoft Certified PL-600 무료샘플문제 (Q108-Q113):

질문 # 108
A company reports the following issues with an existing data management system.
Users cannot search for specific records by using a user-friendly ID or record identifier.
Users occasionally enter data into fields that is not required.
The record form displays all fields. Many of the fields are not used.
You need to ensure that the Power Platform solution will ensure data quality can be properly maintained.
Which component should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.



정답:

설명:



Reference:
https://docs.microsoft.com/en-us/powerapps/maker/data-platform/autonumber-fields
https://docs.microsoft.com/en-us/powerapps/maker/data-platform/data-platform-create-business-rule

질문 # 109

Hotspot Question

A company plans to create a Power Apps portal to manage support cases for customers. The company has an account hierarchy for customers. The hierarchy supports accounts, cases, and contacts where both contacts and cases belong to their relevant account.

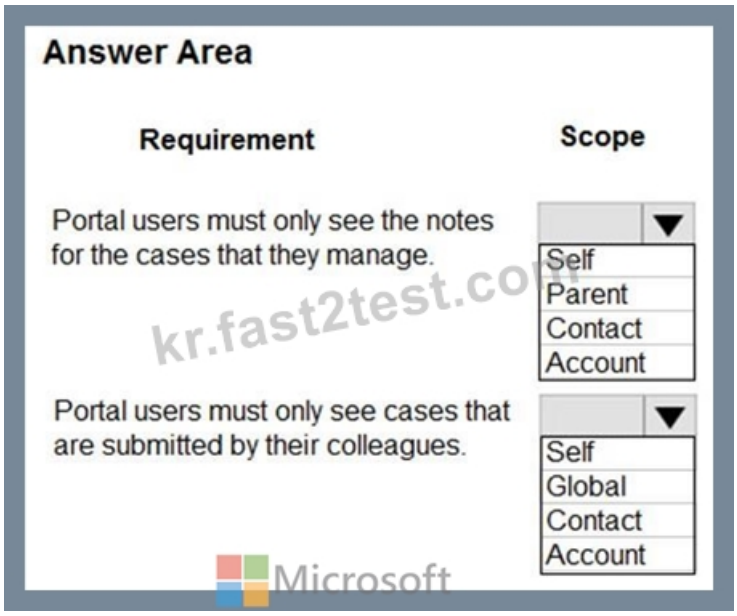
The company has the following requirements:

- Portal users must only see the notes for the cases that they manage.
- Portal users must only see cases that are submitted by their colleagues.

You need to design the security model for the portal.

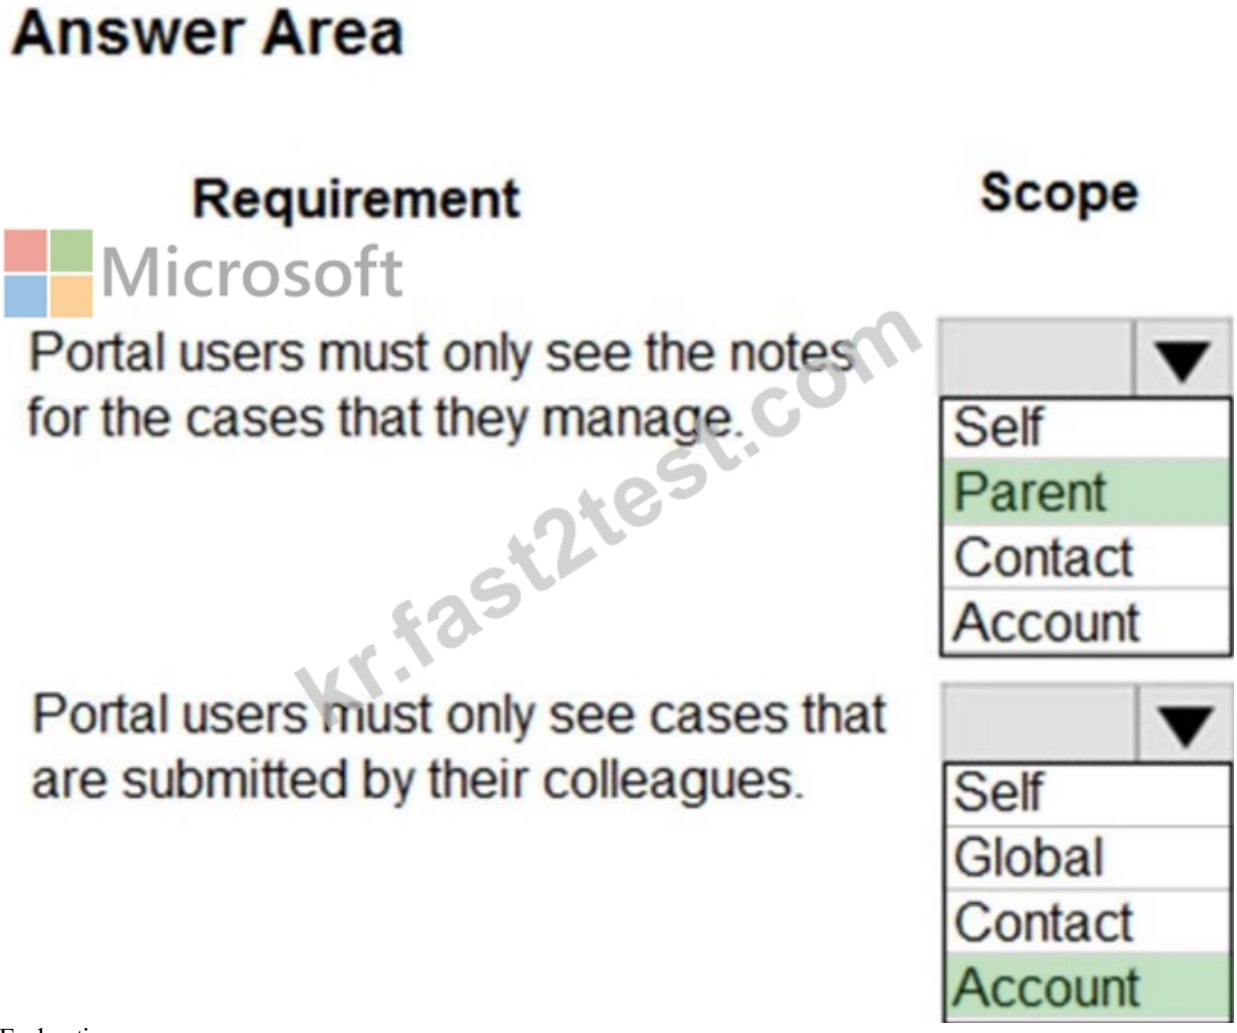
Which entity permission scope should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.



정답:

설명:



Explanation:
Box 1: Parental
There is no direct relationship between annotation and contact records.
Box 2: Account
With Account Scope, a signed-in user in the role for which the permission record is defined will have the rights granted by that permission only for records that are related to that user's parent account record via a defined relationship.

This scope means that the entity list will only show the records of the selected entity that are associated to the user's parent account. For example, if an entity permission allows Read access to Lead entity with the Account scope, the user having this permission can view all the leads of only the parent account of the user.

https://docs.microsoft.com/en-us/powerapps/maker/portals/configure/assign-entity-permissions

질문 # 110
A company is creating a Microsoft Power Platform app to enable employees to log daily time entries. Employee user accounts are in multiple Azure AD tenants and are not located in the tenant that is running the app.
Employees must be added as Azure AD guest accounts within the tenant that will be running the app. Employees must access the model-driven app by being a member of a security team. The security team has been assigned the Employee Security role.
Employees must create personal views of records to view within the system.
You need to implement a security solution.
Which privilege should you use?

- A. Team
- B. Shared app access
- C. Direct basic level
- D. Azure AD security group

정답：A

설명:
In Dynamics 365 and the Power Platform, teams can be used to assign security roles and control access to various entities and records. In this case, employees need to be members of a security team to access the model-driven app. The security team has already been assigned the Employee Security role.
By creating a team and adding employees as members, you can ensure that they have the necessary privileges and access to use the app effectively. The Employee Security role assigned to the team will define the permissions and access levels granted to the employees.

질문 # 111
You need to recommend the field type to use for configuring meal selections during reservation.
Which field type should you recommend?

- A. Option Set
- B. Two Options
- C. Lookup
- D. Global Option Set

정답：C

설명:
Scenario:
* Customers can select a meal when they make a reservation and can save the meal choices as a customer preference.
* The company offers two types of meals: standard and vegetarian. Meal types can be temporarily unavailable. The airline is considering offering other meal types, such as gluten-free and low-sodium options.
In PowerApps Option set is one of the field types you can use in your Entity. The information type that Option Set stores is a list of text values. And here comes the Option Set advantage - once you define its text values you can centrally managed it.
Example:

Microsoft

Topic 1, Relecloud

Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

Relecloud provides regional air service in North America. The company uses a variety of systems, apps, and services to manage the business. You are hired to design a new solution to manage passenger information, reservations, and maintenance.

Current environment

* The company uses Microsoft Office 365.
* The company has a custom app for managing and tracking passenger luggage. The app uses Microsoft Dataverse.
* For flights longer than four hours, passengers receive a meal. Customers can select a meal when they make a reservation and can save the meal choices as a customer preference.
* The company offers two types of meals: standard and vegetarian. Meal types can be temporarily unavailable. The airline is considering offering other meal types, such as gluten-free and low-sodium options.
* The company uses paper-based reservation checklists to help ensure that all the steps for a reservation are complete.
* The company uses vendors to service aircraft.

Environment

* Ensure that employees can sign in to all Microsoft apps by using one set of credentials per employee.
* Minimize the use of third-party products and custom development.
* Reduce customer support call volumes by having the system automatically resolve common issues.
* The security rule for agents must contain the privileges in the default Customer Service Representative security role.
* Log issues as cases. The case form must show variable sections based on the case type. Include a custom entity named Seats and grant agents access to the entity.
* Application use layout should be role specific.

Agents

* You must standardize the format used by agents to enter customer phone numbers.

* Agents need a solution to replace paper reservation checklists.
* Agents need dashboards to show a current count of all reservations on the entity.
* Agents need a way to track reservation issues.
* Agents need a visual indicator in the interface to determine the reservation step to provide a seamless customer experience.
* Agents need different versions of cancellation policies to send customers. One version must be controllable within the system.
* Agents need to view which pieces of luggage match to each passenger, and then need to add the total on the passenger record.

IT

* IT staff needs a mobile solution to see IT cases at the top of the menu since this is their primary focus.
* IT staff needs a system that is easy to navigate to active cases.
* IT specialists want to design Power BI reports. They need to understand the underlying table relationships of the system.
* IT specialists need a solution that is visual rather than text-based so they can quickly complete their tasks.

Management

* Management requires paginated reports for stakeholders.
* Management wants to provide frequent flyers with better service when the flyers call.
* Managers need to see all customer dashboards at the top of their menu on their mobile device.

Maintenance

* Maintenance supervisors must not have access to Dynamics 365 Customer Service. The supervisors must be able to communicate with the contracts team about contracts.
* Aircraft maintenance vendors must have only view and upload privileges to their invoices and receipts.
* Contracts with maintenance companies must be stored in Dynamics 365 Customer Service.

질문 # 112

You design a Power Platform solution for a customer. The solution uses Microsoft Dataverse as the data store. You are managing the go-live process for the solution.

The customer reports the following performance issues:

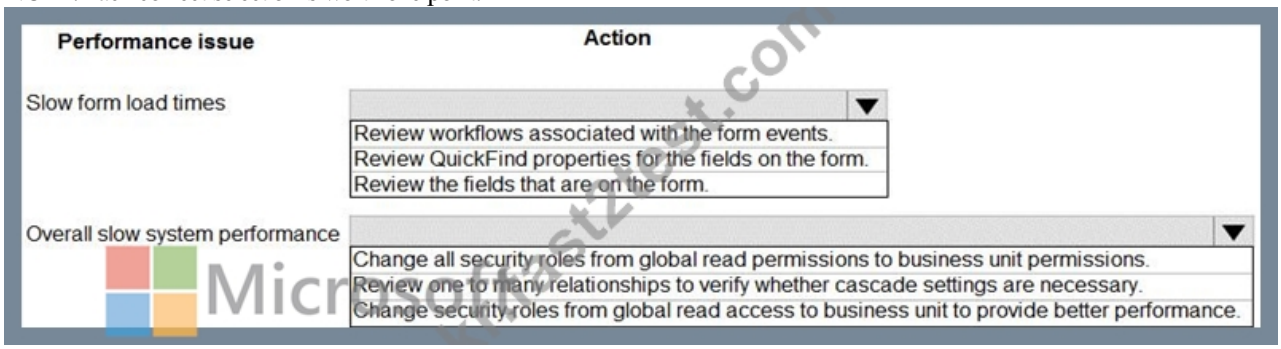
Form load time is much slower than it was during testing.

Overall system performance has been significantly slower that it was during testing.

You need to recommend how to troubleshoot system performance.

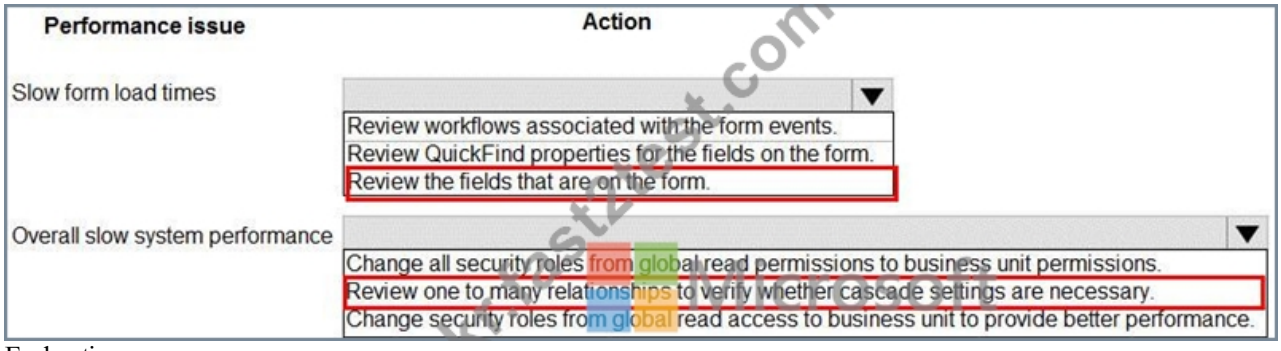
Which actions should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.



정답：

설명：



Explanation:

Box 1: Review the fields that are on the form

Keep the number of table columns (fields) to a minimum.

The more table columns (formerly referred to as fields) you have in a form, the more data that needs to be downloaded to view each record.

Box 2: Review one to many relationships to verify whether cascade settings are necessary.
