Trustworthy Arch-303 Exam Torrent - Arch-303 Pdf Format

Only 20-30 hours are needed for you to learn and prepare our Arch-303 test questions for the exam and you will save your time and energy. No matter you are the students or the in-service staff you are busy in your school learning, your jobs or other important things and can't spare much time to learn. But you buy our Arch-303 Exam Materials you will save your time and energy and focus your attention mainly on your most important thing. And you can master the most important Arch-303 exam torrent in the shortest time and finally pass the Arch-303 exam successfully with our excellent Arch-303 learning prep.

Salesforce Certified B2C Commerce Architect Sample Questions (Q64-Q69):

NEW QUESTION # 64

An Architect is performing an audit of production logs via Log Center and finds some potentially dangerous custom log output. In which two ways is this log output improper in a production environment? Choose 2 answers

- A. The log information includes the customer's cardname as it appears along with the credit card number (PAN), which violates PCI.
- B. The log information includes the order number and customer's email, which violates PCI.
- C. The log information includes the customer's card CW (card security code) and expiration date, which violates PCI.
- D. Information logs should not be used in a production environment

Answer: A,B

Explanation:

In a production environment, logging sensitive customer information such as credit card details (PAN, CVV, expiration date) can lead to severe security and compliance issues, specifically violating PCI DSS (Payment Card Industry Data Security Standard) requirements. The standards strictly prohibit the storage of CVV codes and mandate that any PAN displayed must be masked. Storing such data in logs is not only a risk for data breaches but also non-compliance with these standards can lead to penalties.

* Option A: Including the customer's card name along with the full credit card number in logs is a clear violation of PCI DSS requirements, which stipulate that no more than the last four digits of the card number may be displayed.

* Option B: Logging the card security code (CVV) and expiration date is explicitly prohibited by PCI DSS, which requires that sensitive authentication data, including CVV, must never be stored post- authentication, even if it is encrypted.

NEW QUESTION # 65

A business wants to migrate its customerservice provider from provider A to provider B. Provider e offers a LINK cartridge to integrate with its commerce solution.

Which three artifacts need to be created by the Architect? Choose 3 answers

- A. Document the design of implementing a new B2C Commerce cartridge following the Industry standard best practices
- B. Document how the customer online journey flown from landing on the page to placing of the order
- C. Document the customizations required on top of the LINK cartridge based on current commerce implementation and business needs.
- D. Document the data objects, the interface, and data synchronization frequency between the systems.
- E. Document the data mapping between commerce and customer service provider.

Answer: A,C,D

Explanation:

When integrating a new LINK cartridge for a customer service provider, the following documents are essential:

* Option A (Document the design of implementing a new B2C Commerce cartridge following the industry standard best practices): This ensures that the cartridge is implemented in a manner that is consistent with established best practices, enhancing maintainability and compatibility.

* Option B (Document the data objects, the interface, and data synchronization frequency between the systems): It's crucial to define how data will flow between the new customer service provider and the commerce system, including the frequency of synchronization to ensure data integrity and timeliness.

* Option D (Document the customizations required on top of the LINK cartridge based on current commerce implementation and business needs): Customizing the cartridge to fit the specific needs and existing setup of the commerce system ensures that the integration adds the intended value without disrupting existing operations.

These artifacts will guide the structured integration and customization of the LINK cartridge, ensuring it meets the business's operational and strategic needs.

NEW QUESTION # 66

The Client is planning to switch to a new Payment Service Provider (PSP). They have approached an Architect to understand the time and effort to Integrate the new PSP The PSP offers a LINK cartridge compatible with SiteGenesisPipelines, but the Client's website is build on Controllers.

Which two options should the Architect take into consideration before starting analysis? Choose 2 answers

- A. Look for a different PSP that supports controllers and would not require conversion efforts.
- B. Reach out to the PSP development team and ask if a new cartridge version that supports controllers is under development
- C. Estimate the effort and risk to convert the LINK cartridge from pipelines to controllers.
- D. Produce a proof of concept converting the most essential pipelines into controllers and integrate the cartridge.

Answer: B,C

Explanation:

When integrating a new Payment Service Provider (PSP) LINK cartridge designed for SiteGenesis Pipelines into a site built on Controllers, consider these options:

* Option A (Estimate the effort and risk to convert the LINK cartridge from pipelines to controllers): Assessing the effort involved in converting the cartridge provides insight into the project scope, helping to manage risk and allocate resources effectively.

* Option B (Reach out to the PSP development team and ask if a new cartridge version that supports controllers is under development): This can potentially save significant development time and resources if a compatible version is already planned or in progress.

These approaches help in making an informed decision on integration strategies, balancing between customization efforts and leveraging existing solutions.

NEW QUESTION # 67

a B2C Commerce developer has Implemented a job that connects to an SFTP, loops through a specific number of .csv files, and Generates a generic mapping for every file. In order to keep track of the mappings imported, if a generic mapping is created successfully, a custom object instance is created with the .csv file name.

After running the job in the Development instance, the developer checks the Custom Objects in Business Manager and notices there isn't a Custom Object for each csv file that was on SFTP.

What are two possible reasons that some generic mappings were not created? Choose 2 answers

- A. The job needs to run on Staging and then replicate the generic mappings and custom objects on Development
- B. The generic mappings definition need to be replicated from Staging before running the job.
- C. The maximum number of generic mappings was reached.
- D. Invalid format in one or more of the .csv files.

Answer: C,D

Explanation:

Two plausible reasons for some generic mappings not being created despite the SFTP job running are: A) the system reached its limit for the maximum number of generic mappings allowed, and C) there was an invalid format in one or more of the .csv files processed. When the maximum threshold for mappings is reached, the system cannot create additional mappings, thus stopping any further imports from being registered as custom objects. Additionally, if .csv files are incorrectly formatted, the job would fail to create mappings for those files, leading to the absence of corresponding custom objects in Business Manager. It's crucial to ensure that file formats adhere to expected specifications and that system limits are adequately managed to avoid such issues.

NEW QUESTION # 68

An ecommerce site has dynamic shipping cost calculation. it allows the customers to see their potential shipping costs on the Product Detail Page before adding an item to the cart.

For this feature, shipping totals are calculated using the following logic:

- * Set the shipping method on the Basket
- * Add the item to the basket, calculate the basket total and get the shipping cost for this method
- * Remove the item from the Basket to restore the original state
- * The above process is repeated for each shipping method

During the testing it was discovered that the above code violates the `spi.basket.addResolveInSameRequest` quota.

What should the Architect do to resolve this issue and maintain the business requirement?

- A. Omit the removal of the Item and speed up the process for the customer by adding the product to the basket for them
- B. Omit the calculation of shipping cost until the customer is ready to check out and has chosen the shipping method they want to
- C. Wrap the adding of product and shipping cost calculation in a transaction which is then rolled back to restore the original state
- D. Wrap each individual step of the process in its own transaction instead of using one transaction for all steps.

Answer: C

Explanation:

To resolve the issue of violating the `spi.basket.addResolveInSameRequest` quota and to maintain the functionality of dynamically calculating shipping costs for items before they are added to the basket, the best approach is:

* Option C: Wrapping the adding of product and shipping cost calculation in a transaction, which is then rolled back to restore the original state. This method ensures that the system can calculate potential shipping costs without permanently altering the state of the basket. This approach keeps the basket's original state intact while allowing for multiple shipping calculations, effectively managing the load on system resources and adhering to platform quotas.

NEW QUESTION # 69

.....

Do you have registered for the Salesforce Arch-303 exam and are worried about Salesforce Arch-303 exam preparation? Try Salesforce Arch-303 PDF Questions and practice tests which help you prepare the whole course in less duration. The Salesforce Arch-303 practice test material gives you a clear idea to prepare for the Salesforce Arch-303 Exam and saves you preparation time. An Arch-303 exam is a time-based exam, and the candidate must be fast enough to solve the problems in a limited time.
