New AZ-801 Exam Pdf | 100% Free Updated Configuring Windows Server Hybrid Advanced Services Reliable Mock Test

At the fork in the road, we always face many choices. When we choose job, job are also choosing us. Today's era is a time of fierce

competition. Our AZ-801 exam question can make you stand out in the competition. Why is that? The answer is that you get the certificate. What certificate? Certificates are certifying that you have passed various qualifying examinations. Watch carefully you will find that more and more people are willing to invest time and energy on the AZ-801 Exam, because the exam is not achieved overnight, so many people are trying to find a suitable way.

A section that goes in depth into the Microsoft AZ-801 Certification Exam topics

AZ-801 Dumps cover the following topics of the AZ-801 Certification Exam:

- Implement and manage Windows Server high availability: 25%
- Implement disaster recovery: 15%
- Monitor and troubleshoot Windows Server environments: 20%
- Migrate servers and workloads: 10%
- Secure Windows Server on-premises and hybrid infrastructures: 30%

Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q118-Q123):

NEW QUESTION # 118

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains three servers named Server1, Server2, and Server3 that run Windows Server. All the servers are on the same network and have network connectivity.

On Server1, Windows Defender Firewall has a connection security rule that has the following settings:

- * Rule Type: Server-to-server
- * Endpoint 1: Any IP address
- * Endpoint 2: Any IP address
- * Requirements: Require authentication for inbound connections and request authentication for outbound connections
- * Authentication Method: Computer (Kerberos V5)
- * Profile: Domain, Private, Public
- * Name: Rule1

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statements	Yes	No
When Server1 establishes a network connection with Server2, the connection is encrypted.	<input type="radio"/>	<input type="radio"/>
Server2 can establish a network connection with Server3.	<input type="radio"/>	<input type="radio"/>
When Server3 establishes a network connection with Server1, the connection is encrypted.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
When Server1 establishes a network connection with Server2, the connection is encrypted.	<input type="radio"/>	<input checked="" type="radio"/>
Server2 can establish a network connection with Server3.	<input checked="" type="radio"/>	<input type="radio"/>
When Server3 establishes a network connection with Server1, the connection is encrypted.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation

Statements	Yes	No
When Server1 establishes a network connection with Server2, the connection is encrypted.	<input type="radio"/>	<input checked="" type="radio"/>
Server2 can establish a network connection with Server3.	<input checked="" type="radio"/>	<input type="radio"/>
When Server3 establishes a network connection with Server1, the connection is encrypted.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION # 119

You have a failover cluster named Cluster1 that contains three Windows Server nodes named Node 1, Node2, and Node3. You need to deploy a Storage Spaces Direct virtual disk to Cluster1.

You add the following disks to each node:

- * Three 512-GB NVMe disks
- * Three 3-TB diskS
- * Three 1-TB SSD disks

On Cluster1, you enable Storage Spaces Direct and add the new disks.

What is the total amount of disk space available for the Storage Spaces Direct virtual disk, and which operations are cached for the SSD and HDD disks? To answer, select the appropriate options in the answer area.

The screenshot shows the configuration interface for Storage Spaces Direct. At the top, it asks for the disk space available for the virtual disk, with options: 24 TB, 27 TB, 36 TB, and 40.5 TB. The 40.5 TB option is selected. Below this, there are two sections for cache behavior:

- Cache behavior of the SSD disks:**
 - Neither read nor write operations are cached.
 - Only read operations are cached.
 - Only write operations are cached.
 - Read and write operations are cached. (This option is selected)
- Cache behavior of the HDD disks:**
 - Neither read nor write operations are cached.
 - Only read operations are cached.
 - Only write operations are cached.
 - Read and write operations are cached. (This option is selected)

Answer:

Explanation:

This is an annotated version of the screenshot above. Red boxes highlight the correct selections for the question:

- The **40.5 TB** option for disk space available.
- The **Read and write operations are cached** option for both SSD and HDD disks.

NEW QUESTION # 120

You have an Azure virtual machine named VM1 that runs Windows Server. VM1 has boot diagnostics configured to use a managed storage account.

You are troubleshooting connectivity issue on VM1.

You need to run a PowerShell cmdlet on VM1 by using the Azure Serial Console.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

From the Azure portal, configure the Boot diagnostics settings for VM1 to use a custom storage account.

From the Azure portal, open the Run command blade.

From the Azure portal, open the Serial console blade of VM1.

From the Azure portal, enable just in time (JIT) VM access to VM1.

From the Serial console, run `ch -si 1` and sign in by using a local account.

From the Serial console, run `cmd`.

Answer Area

Answer:

Explanation:

Actions

From the Azure portal, configure the Boot diagnostics settings for VM1 to use a custom storage account.

From the Azure portal, open the Run command blade.

From the Azure portal, open the Serial console blade of VM1.

From the Azure portal, enable just in time (JIT) VM access to VM1.

From the Serial console, run `ch -si 1` and sign in by using a local account.

From the Serial console, run `cmd`.

Answer Area

From the Azure portal, configure the Boot diagnostics settings for VM1 to use a custom storage account.

From the Azure portal, open the Serial console blade of VM1.

From the Serial console, run `cmd`.

From the Serial console, run `ch -si 1` and sign in by using a local account.

NEW QUESTION # 121

You need to meet the technical requirements for Cluster2.

Which four actions should you perform in sequence before you can enable replication? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Create an Azure Recovery Services vault.

Install Azure Connected Machine agents.

Install and register Azure Site Recovery Providers.

Create and associate replication policies.

Create a Hyper-V site.

Answer Area

Answer:

Explanation:

Actions	Answer Area
Create an Azure Recovery Services vault.	Create an Azure Recovery Services vault.
Install Azure Connected Machine agents.	Create a Hyper-V site.
Install and register Azure Site Recovery Providers	
Create and associate replication policies.	Install and register Azure Site Recovery Providers.
Create a Hyper-V site.	Create and associate replication policies.

Explanation:

Create an Azure Recovery Services vault.

Create a Hyper-V site.

Install and register Azure Site Recovery Providers

Create and associate replication policies.

NEW QUESTION # 122

You have 100 Azure virtual machines that run Windows Server. The virtual machines are onboarded to Microsoft Defender for Cloud.

You need to shut down a virtual machine automatically if Microsoft Defender for Cloud generates the "Antimalware disabled in the virtual machine" alert for the virtual machine.

What should you use in Microsoft Defender for Cloud?

- A. adaptive network hardening
- B. a security policy
- C. a workbook
- **D. a logic app**

Answer: D

Explanation:
