最新的 Oracle Cloud 1z0-1042-24 免費考試真題 (Q99-Q104):

問題 #99

The Integrations flow element in Oracle Integration Cloud (OIC) processes provides you an option to easily integrate your process application with other applications and services.

Which three types can be added and managed from the Integrations flow element?

- A. OIC invokable dynamic processes hosted within the same OIC environment
- B. Web Service Connectors
- C. OIC integrations hosted within the same OIC environment
- D. REST Connectors
- E. OCI Functions deployed in the same OCI compartment hosting the OIC environment

答案： B,C,D

解題說明：

The three types that can be added and managed in OIC integrations are OIC integrations hosted within the environment, Web Service Connectors, and REST Connectors. OCI Functions are not directly managed from the integrations flow element.

問題 #100

You are working on integration within Oracle Integration (OIC) that includes several connections to external systems. As part of your development work, you need to implement fault handling to ensure that any unexpected errors are caught and handled correctly. Which approach can you use for this requirement?

- A. Use the Throw New Fault action within your integration flow to send caught faults to the OIC Error Hospital.
- B. Create a separate fault handling integration and configure your integration to invoke it when necessary using the Rethrow Fault action.
- C. Open the Global Fault Handler page on the integration canvas and add actions to handle faults.
- D. Add a Try-Catch action to your integration flow and configure it to catch and handle faults.

答案： C

解題說明：

Comprehensive and Detailed Explanation:

Fault Handling:

* C:True-Global Fault Handler is standard.

問題 #101

You have a use case that requires a large data extract, which is more than 10MB, to be processed within an Oracle Integration Cloud (OIC) integration. Which are three valid options?

- A. Send the file as a multipart attachment to an OIC integration using a REST trigger, and make it available for processing using a Stage File action.
- B. Upload the file to the OIC file server, and then use an FTP adapter Download File operation, which makes it available for processing using a Stage File action.
- C. Retrieve the file by invoking a SOAP API, which sends the document as an MTOM attachment, and make it available for processing using a Stage File action.
- D. Retrieve the file by invoking a SOAP API, which sends Base64 encoded data within the SOAP body, and then decode the data and make it available for processing using a Stage File action.
- E. Retrieve the file from an external endpoint using APIs that support application/blob as content type, and make it available for processing using a Stage File action.

答案： A,C,E

解題說明：

Comprehensive and Detailed Explanation:

Handling large files (>10MB) in OIC requires efficient mechanisms to avoid memory issues. Let's analyze each option:

* Option A:True-REST trigger with multipart attachments is ideal for inbound large files, processed via Stage File.

* Option B:False-Base64 in SOAP body bloats data (33% overhead), risking memory limits for >10MB files.

* Option C:True-MTOM optimizes SOAP attachments, suitable for large files, processed with Stage File.

* Option D:True-APIs returning application/blob handle binary data efficiently, staged for processing.

問題 #102

You are tasked with creating an Oracle Integration Cloud (OIC) integration flow that supports a B2B document exchange. When

configuring the B2B action, there are several capabilities as well as limitations.
Which statement is NOT valid concerning OIC B2B capabilities?

- A. It is mandatory to perform validations on EDI documents for inbound translations; however, for outbound translations, it is optional.
- B. You can customize standard Electronic Data Interchange (EDI) documents by adding new schema constructs or by editing existing constructs.
- C. A previously created Trading Partner Agreement is optional when configuring the inbound or outbound translation.

答案： A

解題說明：

Comprehensive and Detailed Explanation:

OIC's B2B capabilities, available in Enterprise Edition, support EDI document exchange with trading partners. Key points:

* Option A: Validation of EDI documents is configurable but not strictly mandatory for inbound translations. OIC allows users to enable/disable validation for both inbound and outbound flows based on requirements, making this statement invalid.

* Option B: A Trading Partner Agreement (TPA) defines the exchange protocol and is optional during configuration; OIC can process B2B documents without a predefined TPA if basic settings are provided. This is valid.

* Option C: OIC supports customization of EDI schemas (e.g., adding or editing constructs) via the B2B design tools, making this statement valid.

The flexibility in validation settings ensures adaptability to various B2B scenarios, debunking the rigid requirement in A.

問題 #103

Which certificate type involves the uploading of a keystore (.jks) file to Oracle Integration (OIC) to facilitate two-way SSL communication with external services?

- A. Signing key
- B. SAML
- C. PGP
- D. X.509

答案： D

解題說明：

Comprehensive and Detailed Explanation:

Certificates in OIC secure communications:

* C: True-X.509 with .jks file for two-way SSL.
