If you are preparing for the practice exam, we can make sure that the CPMAI_v7 Test Practice files from our company will be the best choice for you, and you cannot find the better study materials than our company'.

PMI Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam Sample Questions (Q90-Q95):

NEW QUESTION # 90

During CPMAI Phase IV: Model Development, which of the following is not done during this phase?

- A. Model Selection

- B. Model training
- C. Algorithm Selection
- D. Model tuning

Answer: A

Explanation:

The Phase IV: Model Development generic tasks include:

Select Modeling Technique (algorithm selection)

Generate model test design

Model Training / Model Building

Hyperparameter Optimization (model tuning)

Final Model Selection (choosing the best candidate against business criteria) is performed in Phase V: Model Evaluation, not in Phase IV .

NEW QUESTION # 91

Your model has been working fine for the last three months, however recently you notice the model's performance has greatly declined. What seems to have been overlooked in your workflow pipeline?

- A. Model retraining
- B. Model Drift
- C. Model Operationalization
- D. Model reevaluation

Answer: A

Explanation:

The CPMAI methodology's Model Iteration Approach (Phase V) explicitly calls out that "models will need continuous iteration, especially if they are only marginally providing the desired results" and requires teams to "detail approach that will be used to iterate this model to improve on any of the results in this Phase" . Failing to include a model retraining pipeline means the model cannot adapt to new data distributions, leading to performance degradation over time.

NEW QUESTION # 92

Your team is working on a project and is running into some issues. You need someone on the team who is able to solve problems in environments of uncertainty, can deal with failure, and has the math and data visualization skills needed to communicate the results with others so the issues can get resolved.

- A. Project Manager
- B. Data Engineer
- C. Citizen Data Scientist
- D. Data Scientist

Answer: D

Explanation:

CPMAI defines a Data Scientist as the role responsible for "formulating data-driven hypotheses, selecting and applying statistical algorithms, interpreting model results, and communicating insights to stakeholders," all of which require critical thinking under uncertainty, advanced mathematics, and strong data-visualization skills .

NEW QUESTION # 93

You are leading a project to develop a new predictive maintenance solution. Together with your project team you determine your data needs, see if you have access to the data, and then begin working on the project.

Which phase best describes the work you are performing?

- A. Phase IV

- B. Phase V
- C. Phase III
- D. Phase VI
- **E. Phase II**
- F. Phase I

Answer: E

Explanation:

Phase II: Data Understanding is dedicated to identifying data requirements, collecting initial data, assessing data quality, and verifying that necessary datasets are accessible and fit for modeling. Determining what data you need and confirming access are the core activities of this phase .

NEW QUESTION # 94

You have been tasked at your organization to manage a large language model (LLM) project. Identify what LLMs are useful for. (Select all that apply.)

- **A. Text summarization**
- **B. Improve search quality**
- **C. Code generation**
- **D. Machine Translation**
- E. Process automation
- **F. Classify and categorize content**

Answer: A,B,C,D,F

Explanation:

Large language models (LLMs) excel at generating, understanding, and manipulating text. According to the CPMIAI Glossary:

Content summarization is a core NLP function: "the process of using AI/ML techniques to generate a concise overview of a larger body of text." Machine translation: "the use of AI to automatically translate text or speech from one language to another."

Classification: LLMs can assign content to categories via fine-tuned classification heads ("classifier" term), making them suitable for content categorization.

Code generation: As generative AI, LLMs can produce new content, including code snippets, by pattern learning from programming corpora ("generative AI" term).

Search quality improvement: LLMs can rephrase queries, expand keywords, and rank results to enhance search relevance. Though not explicitly detailed in the glossary, this capability derives directly from their generative and understanding strengths.

LLMs are not designed for pure process automation (option A), which is handled by RPA or orchestrators rather than by text-centric models.
