- B. FortiManager and FortiSASE registered under the same FortiCloud account.
- C. FortiSASE central management entitlement applied to FortiManager.
- D. The FortiManager IP address in the FortiSASE central management configuration.

答案: A,B

解題說明:

To enable central management, FortiManager must have a FortiSASE connector configured, and both FortiSASE and FortiManager must be registered under the same FortiCloud account to establish trust and synchronization.

問題 #30

What are two benefits of deploying FortiSASE with FortiGate ZTNA access proxy? (Choose two.)

- A. It supports both agentless ZTNA and agent-based ZTNA.
- B. The on-premises FortiGate performs a device posture check.
- C. It offers data center redundancy.
- D. It is ideal for latency-sensitive applications.

答案： A,D

解題說明：

Deploying FortiSASE with FortiGate ZTNA access proxy enables efficient access to private applications with reduced latency and supports both agentless and agent-based ZTNA methods for flexible access control.

問題 #31

During FortiSASE provisioning, how many security points of presence (POPs) need to be configured by the FortiSASE administrator?

- A. 0
- B. 1
- C. 2
- D. 3

答案： A

解題說明：

During initial provisioning, you can select fewer security sites than the maximum you are entitled to. In this case, upon each login, the FortiSASE portal prompts you to select up to the maximum number of security sites. If you add additional security sites using this prompt, then FortiSASE allows for increasing the number of security sites without FortiCare Support. FortiSASE may experience up to 10 minutes of downtime when you apply the entitlement. If any errors occur, FortiSASE cannot automatically rollback without FortiCare Support. For provisioning, you must select a minimum of two security sites for redundancy.

- B. SSO overrides any other previously configured user authentication.
- C. SSO users can be imported into FortiSASE and added to user groups.
- D. SSO identity providers can be integrated using public and private access types.

答案： B

解題說明：

In FortiSASE, Single Sign-On (SSO) takes precedence and overrides other configured user authentication methods, ensuring a centralized and streamlined authentication process across services.

No Data		Recommended: Scanning traffic for threats and applying recommendations. Disabled

- A. Web filter is allowing the URL.
- B. Application control is exempting all the browser traffic.
- C. Deep inspection is not enabled.
- D. Intrusion prevention is disabled.

答案：C

解題說明：

The SSL inspection mode is set to certificate inspection, which only inspects SSL/TLS headers and does not allow full scanning of encrypted content. Without full (deep) inspection, the antivirus profile cannot scan or block malicious files (like eicar.com.zip) delivered over HTTPS, allowing the download to proceed.
