

ISA-IEC-62443認證考試考古題 -最新的ISA ISA-IEC-62443認證考試題庫

CERTIFICATE
No. IITS1 039656 0367 Rev. 00

Holder of Certificate: Omron Corporation
Shiokoji Horikawa, Shimogyo-ku
Kyoto
600-8530
JAPAN

Site(s): Omron Corporation
Industrial Automation Company
Advanced Solution Business Division HQ
Shiokoji Horikawa, Shimogyo-ku,
Kyoto,
600-8530
JAPAN

Certification Mark: 

Type: Industrial IT Security

Scope of Certificate: Secure Development Process

Applied Standard(s): IEC 62443-4-1:2018
PPP 15002B:2021 (IEC 62443-4-1 Full ML2 Process Profile)

The Certification Body of TÜV SÜD Product Service GmbH certifies that the company mentioned above has established and is maintaining a management system which meets the requirements of the listed standards. The results are documented in a report.
See <http://www.tuvsud.com/ps-cert> for details.

Report No.: 735000835-002_Rev01.docx

Valid until: 2026-03-20

Date, 2023-04-13 
(Michael Hermes)

ISA-IEC-62443考古題介紹：ISA/IEC 62443 Cybersecurity Fundamentals Specialist100%通過考試，ISA ISA-IEC-62443 認證

您可以先在網上下載PDFExamDumps為你免費提供的關於ISA ISA-IEC-62443認證考試的練習題及答案作為嘗試，

之後你會覺得PDFExamDumps給你通過考試提供了一顆定心丸。選擇PDFExamDumps為你提供的針對性培訓，你可以很輕鬆通過ISA ISA-IEC-62443 認證考試。

最新的 ISA Cybersecurity ISA-IEC-62443 免費考試真題 (Q167-Q172):

問題 #167

Which of the following provides the overall conceptual basis in the design of an appropriate security program?

- A. Reference model
- B. Zone model
- C. Asset model
- D. Reference architecture

答案: A

解題說明:

The reference model provides the overall conceptual basis for designing an appropriate security program. The ISA/IEC 62443-1-1 standard introduces the reference model to explain the structure, concepts, and relationships within an industrial automation and control system (IACS). It establishes the foundation for applying zones and conduits and for understanding security levels and how assets interact. This model is the cornerstone for implementing other architectural and technical security controls.

Reference: ISA/IEC 62443-1-1:2007, Section 4.2, "Reference Model"; also see Figure 1 in 62443-1-1.

問題 #168

Which statement BEST describes the enforceability of standards?

- A. Compliance with standards is voluntary.
- B. Courts never consider standards when determining liability.
- C. Standards have criminal penalties for non-compliance.
- D. Standards are always legally binding and must be followed.

答案: A

解題說明:

Standards like ISA/IEC 62443 are generally voluntary unless they are incorporated into law, regulation, or contractual obligation. However, they can be used in legal proceedings to determine whether an organization met its duty of care.

"Compliance with standards is generally voluntary, but standards may become mandatory if referenced in laws, regulations, or contracts. Courts may consider them in liability cases."

- ISA/IEC 62443-1-1:2007 - Clause 5.3 - Relationship to Regulatory Requirements Therefore, while not automatically legally binding, standards can have significant regulatory and legal influence.

ISO/IEC Guide 2 - Terminology for standardization

問題 #169

What does Layer 1 of the ISO/OSI protocol stack provide?

Available Choices (select all choices that are correct)

- A. Data encryption, routing, and end-to-end connectivity
- B. The electrical and physical specifications of the data connection
- C. User applications specific to network applications such as reading data registers in a PLC
- D. Framing, converting electrical signals to data, and error checking

答案: B

問題 #170

Which analysis method is MOST frequently used as an input to a security risk assessment?

Available Choices (select all choices that are correct)

- A. System Safety Analysis(SSA)
- B. Failure Mode and Effects Analysis
- C. Job Safety Analysis(JSA)
- **D. Process Hazard Analysis (PHA)**

答案：D

解題說明：

A Process Hazard Analysis (PHA) is a systematic and structured method of identifying and evaluating the potential hazards and risks associated with an industrial process. A PHA can help to identify the possible causes and consequences of undesired events, such as equipment failures, human errors, cyberattacks, natural disasters, etc. A PHA can also provide recommendations for reducing the likelihood and severity of such events, as well as improving the safety and security of the process. A PHA is one of the most frequently used analysis methods as an input to a security risk assessment, as it can help to identify the assets, threats, vulnerabilities, and impacts related to the process, and provide a basis for determining the security risk level and the appropriate security countermeasures. A PHA is also a requirement of the ISA/IEC 62443 standard, as part of the security program development and implementation phase¹². References: 1: ISA/IEC 62443-2-1:

Security risk assessment for system design

問題 #171

How many element groups are in the "Addressing Risk" CSMS category?

Available Choices (select all choices that are correct)

- A. 0
- **B. 1**
- C. 2
- D. 3

答案：B

解題說明：

The "Addressing Risk" CSMS category consists of three element groups: Security Policy, Organization and Awareness; Selected Security Countermeasures; and Implementation of Security Program¹. These element groups cover the aspects of defining the security objectives, roles and responsibilities, policies and procedures, awareness and training, security countermeasures selection and implementation, and security program execution and maintenance¹. The "Addressing Risk" CSMS category aims to reduce the security risk to an acceptable level by applying appropriate security measures to the system under consideration (SuC)
