P.S. Free 2026 Palo Alto Networks NetSec-Analyst dumps are available on Google Drive shared by TrainingDumps:  
[https://drive.google.com/open?id=1gS0tmS\\_E0QDJkm\\_qPui4Xa7isrF3QCBM](https://drive.google.com/open?id=1gS0tmS_E0QDJkm_qPui4Xa7isrF3QCBM)

The learning material is open in three excellent formats; Palo Alto Networks NetSec-Analyst dumps PDF, a desktop Palo Alto Networks NetSec-Analyst dumps practice test, and a web-based Palo Alto Networks NetSec-Analyst dumps practice test. Palo Alto Networks NetSec-Analyst dumps is organized by experts while saving the furthest down-the-line plan to them for the Palo Alto Networks NetSec-Analyst Exam. The sans bug plans have been given to you all to drift through the Palo Alto Networks Network Security Analyst certificate exam.

We try our best to provide the most efficient and intuitive learning methods to the learners and help them learn efficiently. Our NetSec-Analyst exam reference provides the instances to the clients so as to they can understand them intuitively. Based on the consideration that there are the instances to our NetSec-Analyst test guide to concretely demonstrate the knowledge points. Through the stimulation of the Real NetSec-Analyst Exam the clients can have an understanding of the mastery degrees of our NetSec-Analyst exam practice question in practice. Thus our clients can understand the abstract concepts in an intuitive way.

# Palo Alto Networks NetSec-Analyst Test Questions Answers - Correct NetSec-Analyst Valid Test Online and Verified Palo Alto Networks Network Security Analyst Related Certifications

Our products are officially certified, and our NetSec-Analyst exam materials are definitely the most authoritative product in the industry. In order to ensure the authority of our NetSec-Analyst practice prep, our company has really taken many measures. We have hired the most professional experts to compile the content of the NetSec-Analyst study braindumps, and design the displays. So our NetSec-Analyst learning questions can stand the test of the market.

## Palo Alto Networks Network Security Analyst Sample Questions (Q61-Q66):

### NEW QUESTION # 61

Which two statements are true for the DNS security service introduced in PAN-OS version 10.0?

- A. It functions like PAN-DB and requires activation through the app portal.
- B. IT is automatically enabled and configured.
- C. IT eliminates the need for dynamic DNS updates.
- D. It removes the 100K limit for DNS entries for the downloaded DNS updates.

Answer: A,D

### NEW QUESTION # 62

Consider the following Python script designed to generate an External Dynamic List for Palo Alto Networks firewalls. The script pulls data from an API and formats it. If an administrator notices that their firewall EDL is always empty, despite the API returning data, what could be the issue with the generated file or its handling by the firewall?

- A. The firewall does not support the Python script's execution environment.
- B. The API rate limits the script's requests, causing intermittent failures.
- C. The output file does not contain a new line character after each entry, or the file is not served with the correct MIME type (e.g.,
- D. The script is not accessible via HTTP/HTTPS at the configured EDL source URL.
- E. The 'Repeat' interval on the firewall's EDL configuration is set to 'Never'.

Answer: C

Explanation:

If the EDL is consistently empty, it implies the firewall is fetching something but isn't finding valid entries. Option B (Correct): Palo Alto Networks firewalls are strict about EDL file formatting. Each entry must be on a new line. If entries are concatenated or the file is not served as plain text, the firewall will likely parse it as empty or invalid. This is a common pitfall when scripting EDL generation. Option A would result in a 'connection refused' or 'file not found' error, not an empty list. Option C is irrelevant; the script runs on the web server, not the firewall. Option D would mean the EDL never updates at all, not that it's empty after updates. Option E would cause intermittent failures, not consistently empty lists.

### NEW QUESTION # 63

Which option lists the attributes that are selectable when setting up an Application filters?

- A. Name, Category, Technology, Risk, and Characteristic
- B. Category, Subcategory, Technology, and Characteristic
- C. Category, Subcategory, Risk, Standard Ports, and Technology
- D. Category, Subcategory, Technology, Risk, and Characteristic

Answer: D

Explanation:

Explanation/Reference:

### NEW QUESTION # 64

Given the screenshot, what are two correct statements about the logged traffic? (Choose two.)

- A. The web session was unsuccessfully decrypted.
- **B. The web session was decrypted.**
- C. The traffic was denied by URL filtering.
- D. The traffic was denied by security profile.

**Answer: B**

### NEW QUESTION # 65

Consider a large-scale network migration where an organization is transitioning thousands of physical Palo Alto Networks firewalls to a mix of physical and virtual firewalls, all to be managed by Strata Cloud Manager (SCM). The migration plan involves frequent, scheduled policy updates across different device groups. How can an administrator programmatically automate the policy update process and verify successful deployment for multiple device groups using SCM's API?

- A. Deploy a dedicated firewall management server (Panorama) instead of SCM for such a large migration.
- B. Utilize the SCM GUI for batch operations, as API is not suitable for large-scale migrations.
- **C. Develop a Python script that leverages SCM's RESTful API endpoints for configuration management and retrieves job status for deployment validation.**
- D. Manually SSH into each firewall and apply policy updates sequentially, then check logs locally.
- E. Implement an SNMP-based monitoring system to push configurations and receive alerts.

**Answer: C**

Explanation:

SCM's robust RESTful API is designed for programmatic interaction and automation. For a large-scale migration, a Python script (or similar) can be developed to: 1. Authenticate with SCM API. 2. Construct policy update payloads. 3. Send API requests to push policies to specific device groups. 4. Poll SCM's API for job status (commit and push operations) to verify successful deployment across all targeted firewalls. This method provides scalability, automation, and verifiable deployment, which is crucial for large migrations.

### NEW QUESTION # 66

.....

We know that you care about your NetSec-Analyst actual test. Do you want to take a chance of passing your NetSec-Analyst actual test? Now, take the NetSec-Analyst practice test to assess your skills and focus on your studying. Firstly, download our NetSec-Analyst free pdf for a try now. With the try, you can get a sneak preview of what to expect in the NetSec-Analyst Actual Test. That NetSec-Analyst test engine simulates a real, timed testing situation will help you prepare well for the real test.
