## Latest Cybersecurity-Architecture-and-Engineering Exam Notes & Cybersecurity-Architecture-and-Engineering Latest Test Sample

The web-based WGU Cybersecurity-Architecture-and-Engineering practice exam does not require special plugins and creates a Cybersecurity-Architecture-and-Engineering testing atmosphere that removes candidates exam anxiety. "Pass4sureCert" web-based WGU Cybersecurity Architecture and Engineering (KFO1/D488) (Cybersecurity-Architecture-and-Engineering) practice test tracks your progress and helps you overcome mistakes. Our WGU Cybersecurity-Architecture-and-Engineering practice exam software displays results at the end of each attempt.

## WGU Cybersecurity Architecture and Engineering (KFO1/D488) Sample Questions (Q214-Q219):

### NEW QUESTION # 214

The security team has been notified about multiple man-in-the-middle (MITM) attacks happening on the wireless network over the past thirty days. Management has agreed to upgrade the network infrastructure to help eliminate these attacks.

- A. Layer 3 switch
- B. Inline network encryptor
- **C. Wireless intrusion prevention system (WIPS)**
- D. Security information and event management (SIEM)

**Answer: C**

Explanation:

Wireless Intrusion Prevention Systems (WIPS) are specifically designed to monitor wireless networks and prevent rogue access points, MITM attacks, and wireless eavesdropping. Unlike Layer 3 switches or SIEM tools, WIPS directly addresses wireless threat vectors.

NIST SP 800-153 (Guidelines for Securing Wireless Local Area Networks):

"WIPS technologies help detect and prevent unauthorized wireless access points and attacks such as evil twin and man-in-the-middle attempts."

#WGU Course Alignment:

Domain: Network Security

Topic: Implement wireless network protections (e.g., WIPS)

### NEW QUESTION # 215

An IT organization needs to enable secure communication across virtual networks in Microsoft Azure and Amazon Web Services. Which protocol will offer the most reliable and secure method for data transport?

- **A. Internet Protocol Security (IPsec)**
- B. File Transfer Protocol (FTP)
- C. Secure Shell (SSH)

**Answer: A**

Explanation:

IPsec is an end-to-end encryption protocol suite that operates at the network layer, providing authentication, integrity, and confidentiality between virtual networks—even across different cloud environments like Azure and AWS.

NIST SP 800-77 Rev. 1 (Guide to IPsec VPNs):

"IPsec provides network-layer protection through authentication headers (AH) and encapsulating security payloads (ESP), suitable for securing traffic across untrusted environments." FTP is insecure, and SSH is more suitable for command-line access or remote sessions—not secure VPC-to-VPC tunnels.

#WGU Course Alignment:

Domain: Cryptography

Topic: Use encryption protocols like IPsec for secure data transmission between networks

### NEW QUESTION # 216

A government agency is required to comply with the Federal Information Security Modernization Act (FISMA), which establishes security requirements for federal information systems. The agency needs to secure its external network, which connects to the internet and is used by employees, contractors, and other authorized personnel.

Which security control will secure the external network and protect against unauthorized access?

- A. Access controls
- B. Network segmentation
- **C. Firewall**
- D. Intrusion detection and prevention

**Answer: C**

Explanation:

The correct answer is B - Firewall.

According to WGU Cybersecurity Architecture and Engineering (KFO1 / D488), firewalls are critical for securing external network perimeters by filtering incoming and outgoing traffic based on predefined security rules. This control is a foundational requirement under FISMA to prevent unauthorized access.

IDS/IPS (A) monitor and detect attacks but are secondary to establishing the initial network boundary. Access controls (C) manage user permissions inside a system. Network segmentation (D) divides internal networks but does not protect the external boundary.

Reference Extract from Study Guide:

"Firewalls are the first line of defense for securing external networks, providing traffic filtering to prevent unauthorized access, aligning with FISMA compliance requirements."

#### NEW QUESTION # 217

What is the vocabulary and set of rules for instructing a computer to perform certain tasks?

- A. Machine language
- B. Low-level language
- C. Translator language
- **D. Programming language**

**Answer: D**

Explanation:

A programming language is a formal language comprising a set of instructions that produce various kinds of output. Programming languages are used in computer programming to implement algorithms and manipulate data. They provide the vocabulary and grammatical rules for instructing a computer to perform specific tasks, allowing developers to write software programs that can be executed by a computer.

#### NEW QUESTION # 218

An organization sends customers e-mail messages based on their purchase patterns.

Which characteristic of quality data does this represent?

- **A. Relevant**
- B. Accurate
- C. Timely
- D. Thorough

**Answer: A**

Explanation:

The characteristic of quality data represented here is relevance. When an organization sends customers email messages based on their purchase patterns, it ensures that the information is relevant to the customers' interests and needs. Relevant data is tailored to the specific context in which it is used, enhancing its value and effectiveness.

#### NEW QUESTION # 219
