C-ABAPD-2507試験の準備方法 | 完璧なC-ABAPD-2507日本語解説集試験 | 有難いSAP Certified Associate - Back-End Developer - ABAP Cloud試験対策書

この知識が支配的な世界では、知識と実用的な作業能力の組み合わせが非常に重要視されています。Pass4Test実際の能力を向上させたい場合は、C-ABAPD-2507認定試験に参加できます。C-ABAPD-2507認定に合格すると、実践能力と知識の両方を高めることができます。また、C-ABAPD-2507の最新の質問を購入すると、C-ABAPD-2507試験にスムーズに合格します。

SAP C-ABAPD-2507 認定試験の出題範囲:

トピック	出題範囲
トピック 1	Object-Oriented Design: This section of the exam measures skills of SAP ABAP Developers and covers the basics of object-oriented programming in ABAP. It includes concepts such as classes, interfaces, inheritance, polymorphism, and encapsulation, all of which are necessary for building robust and scalable ABAP applications.

トピック 2	• SAP Clean Core Extensibility and ABAP Cloud: This section of the exam measures skills of SAP Application Programmers and covers the clean core principles and extensibility options within SAP BTP. It also includes cloud-native ABAP development practices, emphasizing the creation of upgrade-stable and maintainable extensions aligned with SAP's cloud strategy.
トピック 3	• ABAP SQL and Code Pushdown: This section of the exam measures skills of SAP ABAP Developers and covers the use of advanced SQL techniques within ABAP. It includes code pushdown strategies that leverage database-level processing to enhance application performance. Key areas include Open SQL enhancements and integrating logic closer to the database.

SAP Certified Associate - Back-End Developer - ABAP Cloud 認定 C-ABAPD-2507 試験問題 (Q66-Q71):

質問 # 66

Which of the following enforce ABAP Cloud rules? Note: There are 2 correct answers to this question.

- A. ABAP release contracts
- B. ABAP platform reuse services
- C. ABAP compiler
- D. ABAP runtime checks

正解: C、D

質問 # 67

Which of the following rules apply for dividing with ABAP SQL? Note: There are 3 correct answers to this question.

- A. Numeric function division(nominator, denominator, decimal places) accepts floating point input.
- B. Numeric function division(nominator, denominator, decimal places) accepts decimal input.
- C. Numeric function div(nominator, denominator) expects only integer input.
- D. The division operator "/" accepts decimal input.
- E. The division operator "/" accepts floating point input.

正解: A、C、D

質問 # 68

What are some principles of encapsulation? Note: There are 2 correct answers to this question.

- A. Attributes can be changed through public class methods.
- B. Attributes cannot be changed.
- C. Attributes can be changed by the client program directly.
- D. Attributes can only be changed by the class.

正解: A、D

質問 # 69

You want to extract date information of a flight date (f_info) and format it like yyyy-dd-mm using the following code:

```
SELECT FROM TABLE dbtab1
```

```
FIELDS fl,
```

```
extract_year( f_info ) && '-' && extract_month( f_info ) && '-' && extract_day( f_info ) ...
```

For the extract_* functions to work, what can be the data dictionary types of f_info?

Note: There are 3 correct answers to this question.

- A. UTCLONG
- B. TMS

- C. **TIMESTAMP**
- D. TIMN
- E. **DATS**

正解: A、C、E

解説:

Comprehensive and Detailed Explanation From Exact Extract:

The EXTRACT_YEAR, EXTRACT_MONTH, and EXTRACT_DAY functions in ABAP SQL are SQL built-in functions used for extracting date components. These functions are only supported for timestamp- capable or date-capable fields.

According to the ABAP CDS Development Guide and SAP HANA SQL capabilities available to ABAP SQL via CDS or native SQL:

* DATS (ABAP Dictionary data type for dates) is fully supported for extract functions.

* TIMESTAMP and UTCLONG are also supported since they represent full date-time values and are mapped internally to TIMESTAMP with time zone considerations.

* TMS is a time-only type and is not valid for extract date functions.

* TIMN is for time periods and is also not valid for extracting year, month, or day.

Therefore:

* Option B (UTCLONG) - correct

* Option C (TIMESTAMP) - correct

* Option D (DATS) - correct

* Options A (TMS) and E (TIMN) - incorrect

Reference: ABAP CDS Development User Guide, section 2.2 - SQL expressions and supported built-in functions in code pushdown; extract_* documented for date/time-compatible types.

質問 # 70

/DMO/I_Connection is a CDS view.

What variable type is connection_full based on the following code? DATA connection_full TYPE

/DMO/I_Connection.

- A. Internal Table
- B. **Structure**
- C. Simple variable

正解: B

解説:

Based on the following code, the variable type of connection_full is a structure. A structure is a complex data type that consists of a group of related data objects, called components, that have their own data types and names. A structure can be defined using the TYPES statement or based on an existing structure type, such as a CDS view entity or a CDS DDIC-based view. In this case, the variable connection_full is declared using the TYPE addition, which means that it has the same structure type as the CDS view entity /DMO/I_Connection. The CDS view entity /DMO/I_Connection is a data model view that defines a data model based on the database table /DMO/Connection. The CDS view entity /DMO/I_Connection has the following components: carrid, connid, airpfrom, airpto, distance, and fltime. Therefore, the variable connection_full has the same components as the CDS view entity /DMO/I_Connection, and each component has the same data type and length as the corresponding field in the database table /DMO/Connection.
