APICS CPIM-8.0 Desktop-Based Practice Program

Our passing rate is very high to reach 99% and our CPIM-8.0 exam torrent also boost high hit rate. Our CPIM-8.0 study questions are compiled by authorized experts and approved by professionals with years of experiences. They are compiled according to the latest development conditions in the theory and practice and the questions and answers are based on real exam. Our CPIM-8.0 study questions are linked tightly with the exam papers in the past and conform to the popular trend in the industry. Our product convey you more important information with less amount of the questions and answers. Thus we can be sure that our CPIM-8.0 guide torrent are of high quality and can help you pass the exam with high probability.

APICS CPIM-8.0 Exam Syllabus Topics:

Topic	Details

Topic 1	• Inventory: The inventory module evaluates the skills of Inventory Controllers, covering inventory planning principles such as determining optimal stock levels based on costs versus benefits analysis metrics like ABC classification systems used globally today along with itemized inventory control mechanisms ensuring efficient stock turnover rates while minimizing holding costs.| Distribution: This section measures the abilities of Logistics Coordinators, focusing on distribution network design principles that optimize replenishment orders efficiently while considering reverse logistics practices aimed at reducing waste through proper disposal methods according to environmental regulations.
Topic 2	• Sales and Operations Planning: This module assesses the skills of Operations Planners in terms of sales and operations planning processes. It includes understanding the purpose of S&OP, creating aggregate demand plans, and reconciling these plans to ensure alignment between sales forecasts and operational capabilities. A crucial skill measured is "reconciling supply-demand gaps."
Topic 3	• Detailed Schedules: This section assesses the skills of Production Planners by focusing on detailed scheduling processes for production or service delivery environments. It includes methods like PAC (Programmable Automation Controller) scheduling techniques to manage detailed production timelines efficiently across different materials required for manufacturing or service delivery processes.
Topic 4	• Supply Chains and Strategy: This section of the exam measures the skills of Supply Chain Managers and covers various aspects related to supply chains, including their interaction with the environment and strategic objectives. It delves into developing organizational strategies, functional strategies, performance monitoring using KPIs, risk management, capital equipment management, and sustainability strategies. A key skill assessed here is "analyzing market trends."
Topic 5	• Demand: This section evaluates the abilities of Demand Analysts in managing demand through forecasting techniques. It explores sources of demand data for accurate forecasting and evaluating forecast performance to improve future predictions. One important skill evaluated is "forecasting demand accurately."
Topic 6	• Supply: This module tests the competencies of Procurement Specialists in managing supply chains effectively. It involves creating master schedules for production planning, maintaining these schedules over time, material requirements planning (MRP), capacity requirements planning (CRP), supplier management practices, and purchasing strategies during product life cycle changes. A key skill measured here is "validating master schedules."

APICS Certified in Planning and Inventory Management (CPIM 8.0) Sample Questions (Q229-Q234):

NEW QUESTION # 229
Remote sensors have been deployed at a utility site to reduce overall response times for maintenance staff supporting critical infrastructure. Wireless communications are used to communicate with the remote sensors, as it is the most cost-effective method and minimizes risk to public health and safety. The utility organization has deployed a Host-Based Intrusion Prevention System (HIPS) to monitor and protect the sensors. Which statement BEST describes the risk that is mitigated by utilizing this security tool?

- A. Wardriving attack
- B. Radio Frequency (RF) interference
- C. Denial-Of-Service (DoS)
- D. Malware on the sensor

Answer: D

NEW QUESTION # 230
Which of the following is a core subset of The Open Group Architecture Framework (TOGAF) enterprise architecture model?

- A. Security architecture
- B. Data architecture
- C. Availability architecture

- D. Privacy architecture

Answer: B

NEW QUESTION # 231
Which of the following tools shows process changes and random variation over time?

- A. Pareto analysis
- B. Check sheet
- C. Histogram
- D. Control chart

Answer: D

Explanation:
A control chart is a tool that shows process changes and random variation over time. It is a type of statistical process control (SPC) that monitors the performance of a process and detects whether it is in or out of control. A control chart consists of a center line, an upper control limit, and a lower control limit. The center line represents the average or target value of the process. The control limits represent the acceptable range of variation within the process. If the data points fall within the control limits, the process is considered stable and in control. If the data points fall outside the control limits, or show a non-random pattern, the process is considered unstable and out of control, indicating the presence of special causes of variation that need to be investigated and eliminated. Reference:
Managing Supply Chain Operations, Chapter 9: Quality Management, Section 9.2: Statistical Process Control CPIM Exam Content Manual, Module 8: Quality, Technology and Continuous Improvement, Section 8.1: Quality Management, Subsection 8.1.2: Statistical Process Control

NEW QUESTION # 232
Which of the following inventory management techniques is most responsive to changes in demand levels?

- A. ABC classification
- B. Periodic review system
- C. Two-bin system
- D. Cycle counting

Answer: B

Explanation:
A periodic review system is an inventory management technique where the inventory level is checked at fixed intervals and replenishment orders are placed according to the current demand and inventory position. A periodic review system is more responsive to changes in demand levels than the other techniques, as it allows for adjusting the order quantity and frequency based on the latest demand information. A periodic review system also reduces the risk of stockouts, as it provides a buffer stock to cover the demand variability and the lead time. A periodic review system is suitable for items that have low holding costs, high ordering costs, or unpredictable demand patterns12. NEW QUESTION # 233
An organization intends to host an application on a multi-tenant Infrastructure as a Service (IaaS) platform.
Which of the following measures are MOST important to ensure proper protection of sensitive information?

- A. Enforcement of endpoint security measures on the Virtual Machines (VM) deployed into the service
- B. Enforcement of logging and monitoring of all access to the application
- C. Enforcement of perimeter security measures including the deployment of a virtual firewall
- D. Enforcement of separation measures within the storage layer of the service

Answer: D

NEW QUESTION # 234
