Selecting The Pdf EAEP2201 Pass Leader, Pass The Enterprise Administration Professional 2201

Together, the after-sale service staffs in our company share a passion for our customers, an intense focus on teamwork, speed and agility, and a commitment to trust and respect for all individuals. At present, our company is a leading global provider of EAEP2201 preparation exam in the international market. I can assure you that we will provide considerate on line after sale service for you in twenty four hours a day, seven days a week. Therefore, after buying our EAEP2201 Study Guide, if you have any questions about our study materials, please just feel free to contact with our online after sale service staffs.

Esri Enterprise Administration Professional 2201 Sample Questions (Q37-Q42):

NEW QUESTION # 37

A GIS analyst publishes a 3D scene from ArcGIS Pro to ArcGIS Enterprise to create a hosted 3D scene layer. Which data store hosts the data for the 3D scene layer?

- A. Relational
- B. Raster
- C. Tile cache

Answer: C

Explanation:

Hosted 3D scene layers are stored in the tile cache data store, which is optimized for storing and serving cached 3D content, such as buildings and elevation surfaces. This data store supports scene layers published from ArcGIS Pro and allows for efficient rendering in 3D web scenes within the portal.

The relational data store is used for feature layers and structured tabular data. The raster data store supports large raster datasets for imagery layers. Neither is appropriate for 3D scene layer content. Thus, for hosted 3D scenes, the correct data store is the tile cache. NEW QUESTION # 38

An organization's portal license file provides for 30 Editor user type and 15 GIS Professional user type licenses. After performing a needs assessment, the GIS administrator discovers that the organization requires 10 Viewer, 40 Editor, and 20 GIS Professional user type licenses.

When downloading a new license file, how many of each user type license should the administrator specify?

- A. 10 Viewer, 10 Editor, and 5 GIS Professional user type licenses
- B. 10 Viewer, 40 Editor, and 20 GIS Professional user type licenses
- C. 30 Viewer, 30 Editor, and 15 GIS Professional user type licenses
- D. 40 Editor and 20 GIS Professional user type licenses

Answer: B

Explanation:

When downloading a new license file from My Esri to accommodate the organization's user needs, administrators should request the exact quantities identified in the internal needs assessment:

- * 10 Viewer
- * 40 Editor
- * 20 GIS Professional

These quantities will be used to generate the new license file, which reflects the actual number of entitlements needed. Esri licensing is flexible in this regard, and the administrator can request different counts per type within their entitlements.

From the ArcGIS Enterprise Licensing documentation:

"When generating a new license file for your deployment, you can specify the number of each user type and role needed. The license file will reflect these values, and must match the needs of your organization."

* Option A provides insufficient licenses.

* Option B meets the necessary Viewer licenses.

* Option D reflects original entitlements, not the updated requirement.

NEW QUESTION # 39

A GIS administrator has a group of users who share maintenance responsibilities for a critical application.

The administrator needs to allow all users to edit the application without transferring ownership. Which option should the administrator use?

- A. A collaboration group
- **B. A shared update group**
- C. A public group
- D. An administrative group

Answer: B

Explanation:

A shared update group allows group members to edit each other's items without needing to transfer ownership. This is ideal for collaborative editing and shared responsibility for applications, maps, or dashboards.

From Esri documentation:

"Shared update groups allow multiple members to update items shared with the group, even if they do not own the items."

* Option B doesn't exist as a group type in ArcGIS Enterprise.

* Option C allows viewing, but not editing others' content.

* Option D applies to distributed collaboration, not shared editing.

Reference: ArcGIS Enterprise - Group Settings for Collaborative Management

NEW QUESTION # 40

ArcGIS Server is installed with its Web Adaptor on the same server. The configuration is as follows:

- * ArcGIS Server is federated with Portal for ArcGIS
- * Portal is set up to use Integrated Windows Authentication
- * The environment was set up using a domain certificate
- * The attempted login account is a Windows account with admin privileges A GIS administrator tries to connect to ArcGIS Server Manager through ArcGIS Web Adaptor but the connection fails. Why did the connection fail?

- **A. The certificate must come from a valid Certificate Authority and not a Domain Certificate Authority**
- B. The connection must be made with an internal admin account and not a Windows account
- C. The Web Adaptor was not set to allow administrative access to the server

Answer: A

NEW QUESTION # 41

An organization configures an ArcGIS Enterprise portal to allow single sign-on using Integrated Windows Authentication (IWA).

Configuration includes:

- * All accounts in the Active Directory group gisusers are added to the portal
- * Existing users can sign in without entering credentials However, new employees assigned to the same gisusers group cannot log in, create content, or join groups. What is causing this issue for the new employees?

- A. Their Active Directory accounts have been assigned an incompatible default user type
- B. Their Active Directory accounts have not had sufficient time to sync to the portal
- **C. Their Active Directory accounts have not been added to the portal**
- D. The Web Adaptor cache must be cleared

Answer: C

Explanation:

For IWA authentication, Active Directory users are not automatically added to the ArcGIS Enterprise portal.

They must either be:

- * Manually added as members, or
- * Automatically created at first login if auto-creation is enabled.

Since the new users are assigned to the gisusers group but cannot sign in or create content, it's clear that their accounts have not yet been added to the portal.

From ArcGIS Enterprise documentation:

"Integrated Windows Authentication (IWA) allows users to sign in with their Windows credentials. However, users must still be members of the portal. You can manually add users or enable automatic account creation during login."

* Option B is invalid since default user type settings do not prevent login.

* Option C is incorrect because synchronization is not time-based-it's account-creation dependent.
