220-1201 Guide Torrent: CompTIA A+ Certification Exam: Core 1 - 220-

1201 Exam Prep - Pass-for-sure 220-1201

A lot of IT people want to pass CompTIA certification 220-1201 exams. Thus they can obtain a better promotion opportunity in the IT industry, which can make their wages and life level improved. But in order to pass CompTIA certification 220-1201 exam many people spent a lot of time and energy to consolidate knowledge and didn't pass the exam. This is not cost-effective. If you choose PassTorrent's product, you can save a lot of time and energy to consolidate knowledge, but can easily pass CompTIA Certification 220-1201 Exam. Because PassTorrent's specific training material about CompTIA certification 220-1201 exam can help you 100% pass the exam. If you fail the exam, PassTorrent will give you a full refund.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which of the following is designed to be used in commercial spaces?

- A. Straight tip fiber connector
- B. **Plenum cabling**
- C. Cat 8
- D. USB 3.1 Gen 2

Answer: B

Explanation:

Plenum cabling is designed for use in commercial spaces where cables run through air ducts or plenum spaces, as it has fire-resistant properties and emits less toxic smoke.

Why Not A (USB 3.1 Gen 2): USB is for peripheral connections, not large-scale commercial installations.

Why Not B (Straight tip fiber connector): Fiber connectors are for high-speed connections but are not specifically for commercial spaces.

Why Not D (Cat 8): While Cat 8 is high-speed, it is not uniquely suited for commercial spaces like plenum cabling.

CompTIA A+ Exam Reference: Core 1 (220-1201), Section 3.1, cabling standards.

NEW QUESTION # 26

Which of the following devices forwards traffic based on MAC addresses?

- A. Router
- B. Firewall
- **C. Switch**
- D. Gateway

Answer: C

Explanation:

A network switch operates at Layer 2 (Data Link Layer) of the OSI model and forwards traffic using MAC addresses. CompTIA A+ teaches that switches maintain a MAC address table, learning which devices reside on each port. When a frame arrives, the switch checks the destination MAC address and forwards it only to the appropriate port, reducing unnecessary traffic and improving performance.

Routers, on the other hand, operate at Layer 3 and forward traffic based on IP addresses, not MAC addresses. Firewalls inspect traffic for security policies and operate across multiple OSI layers but do not perform MAC-based forwarding. A gateway is a broad term that generally refers to a device connecting different networks or protocols, typically involving routing, not MAC-based switching.

Thus, the device specifically responsible for forwarding frames based on MAC address lookup is the switch.

NEW QUESTION # 27

A company deploys server machines in a public cloud. Which of the following cloud service models is this an example of?

- A. Software as a service
- B. Anything as a service
- **C. Infrastructure as a service**
- D. Platform as a service

Answer: C

Explanation:

Infrastructure as a Service (IaaS) provides virtualized computing resources over the internet. This includes virtual servers, storage, and networking. Deploying server machines falls under IaaS since the organization is responsible for managing the OS and applications on top of the infrastructure.

Reference: "CompTIA A+ Complete Study Guide" by Quentin Docter - Chapter 8, "Virtualization and Cloud Computing", page 488-490. Also found in the 220-1201 objectives, section 4.1.

NEW QUESTION # 28

A company wants to save printing costs by restricting network printer use. The company implements a solution that requires employees to authenticate to the printer to release print jobs. Which of the following has the company implemented?

- A. Access control list
- **B. Badging**
- C. Print server
- D. Audit logging

Answer: B

Explanation:

Badging is a form of authentication that requires employees to use a badge or ID card to release print jobs. This solution reduces unnecessary printing by ensuring only authorized users print.

Why Not A (Access control list): While ACLs manage permissions, they are not used for physical authentication at printers.

Why Not B (Audit logging): Audit logs track actions but do not restrict printer access.

Why Not D (Print server): A print server manages print jobs but doesn't enforce authentication.

CompTIA A+ Exam Reference: Core 2 (220-1102), Section 2.5, authentication mechanisms.

NEW QUESTION # 29

A user cannot see the office multifunction printer in their laptop's print options. They have printed to the device in the past successfully. The user's laptop is connected to the guest wireless network. Other users on both wireless and wired computers can see and print to the printer. Which of the following will fix the issue?

- A. Download the printer driver from the manufacturer's website.
- B. Power cycle the printer to refresh connectivity.
- C. Reset the closest wireless AP.
- **D. Connect the laptop to the corporate Wi-Fi.**

Answer: D

Explanation:

If the user is on a guest network and cannot access internal resources like printers, connecting to the corporate Wi-Fi will place the device on the correct subnet to access the printer.

From CompTIA A+ 220-1101 Official Study Guide, Objective 2.2 - Network segmentation:

"Guest networks are isolated from internal resources for security. Connect to the main corporate Wi-Fi to access shared devices."
