

# **100% Pass Useful C\_DBADM\_2601 - Latest SAP Certified - Database Administrator - SAP HANA Exam Fee**

You can download and try out our SAP Certified - Database Administrator - SAP HANA exam torrent freely before you purchase our product. Our product provides the demo thus you can have a full understanding of our C\_DBADM\_2601 prep torrent. You can visit the pages of the product and then know the version of the product, the updated time, the quantity of the questions and answers, the characteristics and merits of the C\_DBADM\_2601 test braindumps, the price of the product and the discount. There are also the introduction of the details and the guarantee of our C\_DBADM\_2601 prep torrent for you to read. You can also know how to contact us and what other client's evaluations about our C\_DBADM\_2601 test braindumps. The pages of our product also provide other information about our product and the exam.

There is always a fear of losing C\_DBADM\_2601 exam and this causes you loss of money and waste time. There is no such scene with ITExamSimulator. Your money and exam attempt is bound to award you a sure and definite success with 100% money back guarantee. You can claim for the refund of money if you do not succeed and achieve your target. C\_DBADM\_2601 Exam Materials will ensure you that you will be paid back in full without any deduction. For consolidation of your learning, our SAP Certified - Database Administrator - SAP HANA dumps also provide you sets of practice questions and answers. Doing them again and again, you enrich your knowledge and maximize chances of an outstanding C\_DBADM\_2601 exam success.

**SAP Certified - Database Administrator - SAP HANA training torrent & C\_DBADM\_2601 free download pdf are the key to success**

The C\_DBADM\_2601 PDF is the collection of real, valid, and updated SAP Certified - Database Administrator - SAP HANA (C\_DBADM\_2601) practice questions. The SAP C\_DBADM\_2601 PDF dumps file works with all smart devices. You can use the C\_DBADM\_2601 PDF questions on your tablet, smartphone, or laptop and start C\_DBADM\_2601 Exam Preparation anytime and anywhere. The C\_DBADM\_2601 dumps PDF provides you with everything that you must need in C\_DBADM\_2601 exam preparation and enable you to crack the final C\_DBADM\_2601 exam quickly.

## SAP Certified - Database Administrator - SAP HANA Sample Questions (Q22-Q27):

### NEW QUESTION # 22

CHALLENGE 4 - Service Continuity Recovery Gate

The service lead can accept hypercare readiness on schedule using backup completion evidence, or delay briefly to include recovery validation for the stabilization database and recoverability evidence for the upgraded system. Which path is most defensible?

- A. Accept on schedule because meeting the service review date is the strongest governance outcome.
- B. Cancel the readiness decision because recovery validation was not completed before testing began.
- C. Accept on schedule and attach recovery validation to the future SAP HANA Cloud migration plan.
- **D. Delay briefly to complete recoverability evidence for systems supporting the readiness package.**

**Answer: D**

Explanation:

Feedback:

A brief delay is most defensible because it completes recoverability evidence for systems supporting the readiness package. This balances schedule governance with operational resilience evidence.

### NEW QUESTION # 23

A regional safety equipment supplier is preparing an SAP HANA upgrade rehearsal in an on-premises administration environment. The database is available, and the upgrade preparation folder contains a completed readiness checklist. Before execution, the administrator notices that the checklist was signed before the final backup evidence was attached. SAP HANA cockpit shows no current database alert, and the maintenance lead wants to begin the upgrade because the checklist status is marked complete. The constraint is that the administrator must ensure the rehearsal starts only after lifecycle prerequisites reflect the current preparation state. The decision must not rely on a checklist completion flag that was created before final evidence was available. What should the administrator do before beginning the upgrade rehearsal?

- A. Begin the rehearsal because the readiness checklist is complete and SAP HANA cockpit shows no alert.
- **B. Revalidate the readiness checklist after confirming the final backup evidence, then proceed only if the current prerequisite evidence is complete.**
- C. Attach the backup evidence after the rehearsal starts because the database is currently available.
- D. Restart the database so the upgrade preparation state can be refreshed before execution.

**Answer: B**

Explanation:

Feedback:

This corrects the lifecycle evidence timing gap. Revalidating after confirming backup evidence aligns prerequisite completion, backup readiness, upgrade execution, and approval evidence before the rehearsal begins.

### NEW QUESTION # 24

CHALLENGE 4 - Regional Release Recovery Assurance

Backups completed for the upgraded central SAP HANA system and the newly installed remediation database before testing began. Recovery validation for the remediation database is scheduled but not complete, and the upgraded system has only backup completion evidence. What should happen before regional release approval?

- A. Approve the release because completed backups are enough for retail reporting continuity.
- B. Replace recovery validation with dashboard availability because this is not a production outage.
- C. Release the template and perform recovery validation only if reporting becomes unavailable.
- **D. Complete recovery validation and document startup behavior for the remediation systems.**

**Answer: D**

Explanation:

Feedback:

Recovery validation and startup behavior should be completed before regional release approval. Backup completion supports continuity planning, but it does not prove recoverability for the remediation systems.

#### NEW QUESTION # 25

CHALLENGE 4 - Shipping-Cycle Recovery Evidence Gate

The business sponsor asks whether the release decision can proceed because the systems are available and backups completed.

The administration lead wants startup behavior after recovery documented first. Which response best fits the scenario?

- A. Remove recovery evidence from the release package because cutover testing is not daily production.
- B. Proceed now and validate startup behavior during the later cloud migration phase.
- C. Proceed because availability and backup completion together are enough for release evidence.
- **D. Complete recovery validation and startup behavior documentation before final approval.**

**Answer: D**

Explanation:

Feedback:

Recovery validation and startup behavior documentation should be completed before final approval. The scenario requires continuity evidence that goes beyond availability and backup completion.

#### NEW QUESTION # 26

A marine logistics company is planning a phased move from SAP HANA on-premises to SAP HANA Cloud. In the first rehearsal, the source export completes and the SAP HANA Cloud target is reachable. During post-transfer checks, the administrator notices that the validation workbook records transfer completion but has no evidence that monitoring and backup administration were reviewed for the cloud target after import. The project lead wants to approve the phase because the data movement finished.

The constraint is that the administrator must support incremental modernization while confirming that the target can be administered after migration. Approval must be based on transfer success plus operational readiness evidence.

What should the administrator recommend before approving the migration phase?

- A. Defer monitoring and backup administration review until after production cutover to keep the phased plan on schedule.
- **B. Add target-side monitoring and backup administration validation to the rehearsal evidence, then approve only after those checks pass.**
- C. Approve the phase because source export completion and target reachability prove the migration path works.
- D. Repeat only the source export so the data movement result is confirmed before the production window.

**Answer: B**

Explanation:

Feedback:

This resolves the rehearsal evidence gap while preserving the phased modernization approach. Adding target-side monitoring and backup validation confirms that transfer, cloud target operation, and post-migration administration readiness are aligned before approval.

#### NEW QUESTION # 27

.....

Everyone wants to succeed. As a worker in IT industry, you know how important the C\_DBADM\_2601 exam certification is for your career success. There are more and more people to participate in C\_DBADM\_2601 certification exam, and how to win in the increasingly competitive situation? To chose the right hand is the key. Our ITExamSimulator team has studies the C\_DBADM\_2601 Certification Exam for years so that we have in-depth knowledge of the test. We believe that you must be succeed in the exam with the help of C\_DBADM\_2601 test software provided by our ITExamSimulator.
