When running the Publish Order Forecast scheduled process, what is the minimum set of parameters needed to publish additional measures such as requisition and purchase order data?

- A. Include purchase orders in the order forecast

- D. Include requisitions in the order forecast, "Include purchase orders in the order forecast", and "Publish purchasing details"

問題 #43

Planner 1 works in Europe and needs to see three measures in kilograms (the default UOM). Planner 2 is US- based and needs to see those same three measures in pounds. Both planners need to use five tables in their plan analyses on a regular basis. At the moment, all five tables are displayed in kilograms.

Which two options would most efficiently address this requirement?

- A. Duplicate all five tables, then format the three measures in the copied tables to be displayed in pounds.
- B. Create duplicates of the three measures in Manage Planning Measures and change each new measure's UOM from kilograms to pounds, then duplicate the five tables but use the new measures.
- C. Open each table and format measures to duplicate the three measures and then format the duplicated measures to be displayed in pounds.
- D. There is no efficient solution to this requirement.
- E. Planner 2 opens a table, formats each measure to be displayed in pounds. When Planner 1 opens the same table, they reformat back to be displayed in kilograms.

答案: B,C

解題說明:

The most efficient way to accommodate both planners' needs is to create duplicates of the required measures in pounds and then duplicate the tables to include the reformatted measures. This allows both planners to access tables in their preferred units without repetitive reformatting MY ORACLE SUPPORT
