Latest HP HPE7-A01 Braindumps Files, Test HPE7-A01 Collection

At present, many office workers are dedicated to improving themselves. Most of them make use of their spare time to study our HPE7-A01 study materials. As you can see, it is important to update your skills in company. After all, the most outstanding worker

can get promotion. You also need to plan for your future. Getting the HPE7-A01 Study Materials will enhance your ability. Also, various good jobs are waiting for you choose. Your life will become wonderful if you accept our guidance.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q94-Q99):

NEW QUESTION # 94

You are troubleshooting an issue with a pair of Aruba CX 8360 switches configured with VSX Each switch has multiple VRFs. You need to find the IP address of a particular client device with a known MAC address You run the "show arp" command on the primary switch in the pair but do not find a matching entry for the client MAC address.

The client device is connected to an Aruba CX 6100 switch by VSX LAG.

Which action can be used to find the IP address successfully?

- A. □
- B. □
- C. □
- D. □

Answer: B

Explanation:

The show arp command displays the ARP table for a specific VRF or all VRFs on the switch. The ARP table contains the IP address to MAC address mappings for hosts that are directly connected to the switch or reachable through a gateway. If the client device is connected to another switch by VSX LAG, the ARP entry for the client device will not be present on the primary switch unless it has communicated with it recently.

Therefore, to find the IP address of the client device, the administrator should run the show arp command on the secondary switch in the VSX pair, specifying the VRF name that contains the client device's subnet.References:https://techhub.hpe.com/eginfolib/Aruba/OS-CX_10.04/5200-6692/GUID-9B8F6E8F-9C7A-

NEW QUESTION # 95

Due to a shipping error, five (5) Aruba AP-515S and one (1) Aruba CX 6300 were sent directly to your new branch office You have configured a new group persona for the new branch office devices in Central, but you do not know their MAC addresses or serial numbers The office manager is instructed via text message on their smartphone to onboard all the new hardware into Aruba Central What application must the office manager use on their phone to complete this task?

- A. Aruba Central App
- B. Aruba Onboard App
- C. Aruba installer App
- D. Aruba CX Mobile App

Answer: A

Explanation:
Explanation
Aruba Central is a cloud-based networking solution that empowers IT with AI-powered insights, intuitive visualizations, workflow automation, and edge-to-cloud security to manage campus, branch, remote, data center, and IoT networks from one dashboard1. Aruba Central also provides a mobile app that allows users to easily onboard and monitor devices2. The app enables users to scan the barcode of a device (such as an AP or a switch) and add it to their network in Aruba Central2. The app also lets users monitor the details of Aruba wireless access points and switches and their clients on their network2.

Therefore, the application that the office manager must use on their phone to complete the task of onboarding all the new hardware into Aruba Central is the Aruba Central App.

NEW QUESTION # 96

Your customer has four (4) Aruba 7200 Series Gateways and two (2) 7000 Series Gateways. The customer wants to form a cluster with these Gateways.

What design consideration would prevent you from using all of those Gateways?

- A. A heterogeneous cluster is not supported in AOS 10.x.
- B. A combination of 7200 series and 7000 series gateways supports up to 4 nodes
- C. Multiple versions between Gateways in the same cluster profile are not allowed AOS 10.x.
- D. The AP load should be lowest value of worst-case scenario load.

Answer: A

Explanation:
The reason is that AOS 10.x does not support clustering gateways with different versions in the same cluster profile. A cluster profile defines the configuration settings for a group of gateways that are managed by Aruba Central.
According to the Aruba documentation2, "You can combine 7200 Series and 7000 Series gateways in the same cluster with a maximum size of four devices with reduced AP client capacity on 7000 Series gateways."

NEW QUESTION # 97
Which statement best describes QoS?

- A. Determining which traffic passes specified quality metrics
- B. Identifying the quality of the connection
- C. Identifying specific traffic for special treatment
- D. Scoring traffic based on the quality of the contents

Answer: A

Explanation:
QoS stands for Quality of Service and is a mechanism that allows network devices to prioritize and differentiate traffic based on certain criteria, such as application type, source, destination, etc3. QoS involves identifying specific traffic for special treatment and applying policies and actions to improve its performance or meet certain service level agreements (SLAs)3. QoS can help network devices to manage congestion, delay, jitter, packet loss, bandwidth allocation, etc., for different types of traffic3. QoS can be implemented at various layers of the network stack and across different network domains. References: 3

NEW QUESTION # 98
Which method is used to onboard a new UXI in an existing environment with 802 1X authentication?
(The sensor has no cellular connection)

- A. Use the Aruba installer app on your smartphone to scan the barcode
- B. Use the CLI via the serial cable and adjust the initial configuration.
- C. Use the UXI app on your smartphone and connect the UXI via Bluetooth
- D. Connect the new UXI from an already installed one and adjust the initial configuration.

Answer: C

Explanation:
To onboard a new UXI in an existing environment with 802.1X authentication, you need to use the UXI app on your smartphone and connect the UXI via Bluetooth. The UXI app allows you to scan the QR code on the UXI sensor and configure its network settings, such as SSID, password, IP address, etc.
The Bluetooth connection allows you to communicate with the UXI sensor without requiring any network access or cellular connection. The other options are incorrect because they either do not use the UXI app or do not use Bluetooth.
