## Salesforce Order Management Administrator Accredited Professional Sample Questions (Q104-Q109):

### NEW QUESTION # 104

Which object record is created when customer returns a product after fulfillment?

- A. Order Summary Adjustment
- B. Payment Order Summary
- C. Fulfillment Order
- D. Return Order

Answer: D

Explanation:

The object record that is created when customer returns a product after fulfillment is Return Order. A Return Order is a record that represents a return request for an order or part of an order. A Return Order has a lookup relationship to both Order Summary and Change Order objects, and it contains information such as the return reason, status, date, etc. Verified References:[https://help.salesforce.com/s/articleView?id=sf\\_order\\_management\\_return\\_order.htm&type=5](https://help.salesforce.com/s/articleView?id=sf_order_management_return_order.htm&type=5)

### NEW QUESTION # 105

Which two practices are needed for a custom attribute to map into Order Management assuming the attribute has been created on the necessary objects?

- A. The types must match within reason
- B. The names must be an exact match
- C. The types must be an exact match (i.e. String to String)
- D. The names must only contain letters and underscores

Answer: A,B

Explanation:

Two practices that are needed for a custom attribute to map into Order Management assuming the attribute has been created on the necessary objects are: The types must match within reason. The data type of the custom attribute in Order Management must match or be compatible with the data type of the corresponding attribute in the external system, such as B2C Commerce or B2B Commerce. For example, if the attribute is a string in B2C Commerce, it must also be a string in Order Management.

The names must be an exact match. The name of the custom attribute in Order Management must be exactly the same as the name of the corresponding attribute in the external system, including capitalization and punctuation. For example, if the attribute is named "kitItem" in B2C Commerce, it must also be named "kitItem" in Order Management.

### NEW QUESTION # 106

For what use case would an administrator enable Person Accounts during Order Management setup?

- A. Connecting Order Management to B2B Commerce
- B. Connecting to an external ERP system
- C. Connecting Order Management to B2C Commerce
- D. Person Accounts are always enabled for Order Management

Answer: C

Explanation:

An administrator would enable Person Accounts during Order Management setup for the use case of connecting Order Management to B2C Commerce. B2C Commerce is a cloud-based platform that enables businesses to create and manage online storefronts for consumers. B2C Commerce uses Person Accounts to represent individual shoppers who place orders on the storefronts. Person Accounts are a type of account that combines account and contact information into a single record. To connect Order Management to B2C Commerce, an administrator needs to enable Person Accounts in Order Management and install the B2C Commerce Integration package from AppExchange. ### NEW QUESTION # 107

A company sells its products in kits. The company wants the kits to remain grouped together during returns in Order Management so that all parts of the kit are accounted for.

What should the administrator recommend?

- A. Track the individual kit items using custom attributes
- B. Pass the data as is. Order Management will handle the kit.
- C. Add a suffix to the Stock Keeping Unit of the Product which represents Kit status
- D. Add a custom attribute to the order header only

Answer: A

Explanation:

The best way for the administrator to recommend tracking the kits so that they remain grouped together during returns in Order Management is to use custom attributes. Custom attributes are fields that can be added to objects to store additional information that is not available in standard fields. The administrator can create custom attributes for the Order Item Summary object to indicate whether an item is part of a kit, and what are the other items in the kit. This way, the kits can be easily identified and handled during returns. Verified Reference:

#### NEW QUESTION # 108

Which object is used to create an invoice?

- A. Shipment
- B. Fulfillment Order
- C. Order Summary**
- D. Order

**Answer: C**

Explanation:

The Order Summary object is used to create an invoice. An invoice is a document that requests payment from a customer for an order. An invoice can include one or more fulfillment orders and one or more credit memos. A fulfillment order is a record that represents a part of an order that is fulfilled by a specific location. A credit memo is a record that represents a partial or full refund for an order or a fulfillment order. To create an invoice, an administrator can use the Create Invoice Apex action in a flow. The Create Invoice Apex action requires the Order Summary ID as an input parameter and creates an Invoice record associated with the Order Summary record.
