The world is rapidly moving forward due to the continuous development of information. Our company is also making progress in every field. The first manifestation is downloading efficiency. A lot of exam candidates these days are facing problems like lacking of time, or lacking of accurate right to get acquainted with high efficient L4M7 guide question like ours. We emphasize on customers satisfaction, which benefits both exam candidates and our company equally. By downloading and supporting support our customers value, our company has been getting a growing more and more customers. To match the goal of exam candidates, we created the high quality and high accuracy L4M7 real exam for you. By experts who diligently work to improve our practice material every ten years, all content are precise and useful and we make necessary adjustments at intervals.

CIPS L4M7 Exam Syllabus Topics:

Topic	Details
Topic 1	• Environmental standards for packaging • Materials handling equipment
Topic 2	• Explain the use of product coding in inventory operations • Order tracking technologies
Topic 3	• Contrast the impact of the use of different warehousing equipment • Optimized methods for the storage and movement of inventory
Topic 4	• Determine demand and inter-warehouse demand forecast 'stock • ABC classification of stock that may apply

L4M7 Valid Real Test & L4M7 Latest Dumps Free

TestkingPass has hired a team of experts who keeps an eye on the CIPS Whole Life Asset Management real exam content and updates our L4M7 study material according to new changes on daily basis. Moreover, you will receive free CIPS Whole Life Asset Management exam questions updates if there are any updates in the content of the CIPS Whole Life Asset Management test. These

updates will be given within up to 1 year of your purchase. The 24/7 support system has been made for your assistance to solve your technical problems while using our product. Don't wait anymore. Buy real CIPS Whole Life Asset Management questions and start preparation for the L4M7 test today!

CIPS Whole Life Asset Management Sample Questions (Q94-Q99):

NEW QUESTION # 94

Which of the following allow the operators to access higher levels in warehouse facility? Select TWO that apply:

- A. Order picker
- B. Stacker crane
- C. Carousel
- D. Grab
- E. Scissor platform

Answer: A,E

Explanation:

It is important to ensure safe working in storage facilities, and access to higher shelves or racking presents a challenge. Lifting at full reach becomes a problem at relative low weight. There can also be danger for other workers who are around someone working at height, from the movement of equipment or dropping stock from a height.

Scissor platforms are used in high-roof warehouses to gain access to lighting, high-racking units and sections of wall and roof.

ORDER PICKER is manual or powered device - some with ride-on capability and some without. This allow for low-level, medium-level and high-level picking of various items. Many are equipped with forks to allow transfer capability of larger picked boxes.

Higher-level and narrow or very narrow -aisle versions have the ability to elevate operators on the front platform to higher racking to pick items.

Grabs are designed to hold stock either width-wise or from above. These are either specific devices designed for grabbing materials or are available as an accessory to forklift trucks.

Carousels are space-efficient, rotating devices which allow access to a large range of product from a single location. Designs are variable, with carousels rotating horizontally or vertically until the required items can be retrieved.

Stacker-cranes are designed for the automated storage and retrieval of unit loads, in high-bay warehouses.

They travel in aisles equipped with guide rails, electrical supply, data transmission and control systems. To ensure the storage and retrieval functions, the stacker-crane carries out three types of movement : long-travel, lifting and picking.

NEW QUESTION # 95

Which of the following best describes available inventory (also known as inventory position)?

- A. The amount of inventory on hand plus the amount of inventory on order
- B. The amount of inventory on order only
- C. The amount of inventory on hand
- D. The amount of inventory on hand in excess of expected demand

Answer: A

Explanation:

Available inventory (or Inventory position - IP) is equal to inventory on-hand plus quantity on order minus backorder (if any)

NEW QUESTION # 96

Which of the following are critical factors that must be considered when evaluating warehouse or storage locations?

- * The cost of the proposed location
- * Who owns the storage location or warehouse
- * Access to transport networks
- * The number of windows in the building

- A. 2 and 3 only
- B. 2 and 4 only
- C. 1 and 3 only
- D. 1 and 4 only

Answer: C

NEW QUESTION # 97

U-shape flow layout can utilise handling equipment if the high demands items locate adjacent to shipping docks. Is this statement true?

- A. No, because cross-docking is impossible in U-shape flow warehouse
- B. Yes, because U-shape layout allows S-line routing more efficient
- C. Yes, because this layout places receiving docks and despatch docks close to one another
- D. No, because aisles between racks in U-shape flow are too small for any handling equipment

Answer: C

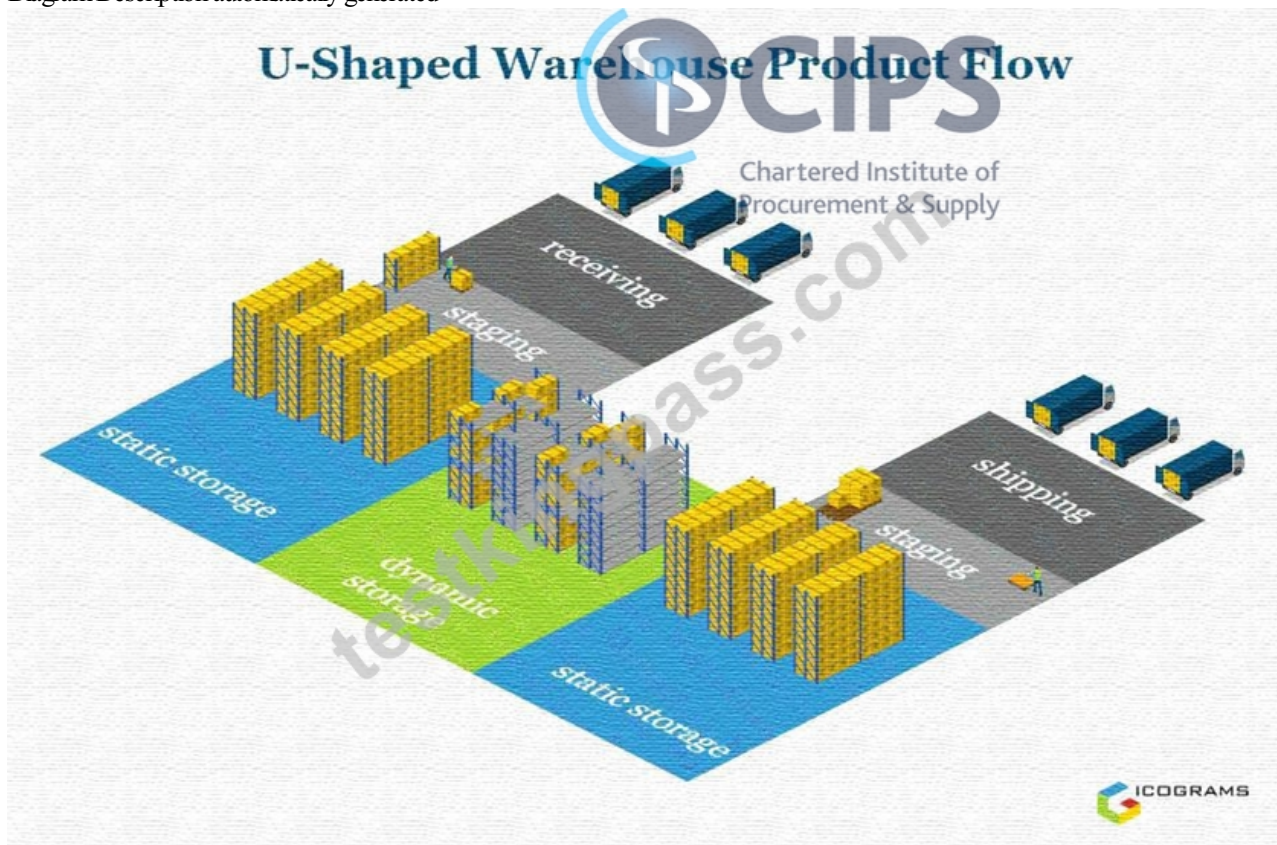

Explanation:

A 'U' flow occurs when the goods receipt and dispatch functions are located at the same end of a warehouse building.

Products flow in at receiving, move in to storage in the back of the warehouse, and then to shipping, which is located at the adjacent to receiving on the same side of the building.

Items with higher throughput level are located closer to the loading bays. An example of a 'U' flow design can be seen in the diagram below.

Diagram Description automatically generated

Advantages of 'U' Flow

- Excellent utilization of dock resources because the receiving and shipping processes can share dock doors

- Facilitating cross-docking because the receiving and shipping docks are adjacent to one another and may be co-mingled
- Excellent lift truck utilization because put away and retrieval trips are easily combined and because the storage locations closest to the receiving and shipping docks are natural locations to house fast moving items
- Yields excellent security because there is a single side of the building used for entry and exit

NEW QUESTION # 98

When deciding on the storage facilities and locations, an organisation needs to assess the current situation comprehensively and forecast the future demands. Quantitative analysis is the best method for these activities. Is this statement true?

- **A. No, some intangible information is difficult to collect and measure**
- B. No, subjective judgements are the best as they compensate for weaknesses of quantitative analysis
- C. Yes, quantitative analysis is easy to implement as it is based on 'hard' facts
- D. Yes, quantitative analysis provides a reality based on numerical values

Answer: A

Explanation:

Decisions regarding stores and warehouse locations involve a complex range of issues that are unique to each business. Most storage facilities and location decisions are based on a combination of qualitative and quantitative analysis.

Qualitative analysis uses subjective judgment to analyze a situation based on non-quantifiable information, such as potential markets for new products, forecast on possible risks that may happen, etc.

Quantitative analysis (QA) is a technique that uses mathematical and statistical modeling, measurement, and research to understand behavior. Quantitative analysts represent a given reality in terms of a numerical value. This may include the following:

- Cost analysis for the current premises and future predictions based on current premises
 - Cost analysis for routine operations
 - Current inventory performance measures: lead times, service levels, rate of stock turn, stock-outs in a given period and stock cover
- To get a big picture of current situation and future demands, organisation should combine both qualitative and quantitative methods so that useful information is achieved and well-informed decisions are made.
