

Original F5CAB4 Questions, Study Materials F5CAB4 Review

2026 Latest ITdumpsfree F5CAB4 PDF Dumps and F5CAB4 Exam Engine Free Share: <https://drive.google.com/open?id=16L1kQoPaNL03UQTcmRh-KxlZSo6OOoCM>

Our F5CAB4 exam questions will be the easiest access to success without accident for you. Besides, we are punctually meeting commitments to offer help on F5CAB4 study materials. So there is no doubt any information you provide will be treated as strictly serious and spare you from any loss of personal loss. There are so many success examples by choosing our F5CAB4 Guide quiz, so we believe you can be one of them.

With the advent of knowledge times, we all need some professional certificates such as F5 F5CAB4 to prove ourselves in different working or learning condition. So making right decision of choosing useful practice materials is of vital importance. Here we would like to introduce our F5 F5CAB4 practice materials for you with our heartfelt sincerity.

Study Materials F5CAB4 Review | F5CAB4 Test Assessment

No doubt the BIG-IP Administration Control Plane Administration (F5CAB4) certification is one of the most challenging certification exams in the market. This BIG-IP Administration Control Plane Administration (F5CAB4) certification exam gives always a tough time to BIG-IP Administration Control Plane Administration (F5CAB4) exam candidates. The ITdumpsfree understands this hurdle and offers recommended and real F5 F5CAB4 Exam Practice questions in three different formats. These formats hold high demand in the market and offer a great solution for quick and complete BIG-IP Administration Control Plane

F5 BIG-IP Administration Control Plane Administration Sample Questions (Q15-Q20):

NEW QUESTION # 15

Which command will provide the BIG-IP Administrator with the current device HA status? (Choose one answer)

- A. show /sys failover
- B. show /cm failover-status
- C. list /cm failover

Answer: B

Explanation:

To determine the current failover (HA) status of a BIG-IP system using tmsh, F5 documentation explicitly states that the administrator should use the following command:

```
show /cm failover-status
```

This command displays:

The current failover state (active, standby, or offline)

Detailed failover status information

The operational HA condition of the device within a device group

According to F5 Knowledge Base Article K08452454, the documented procedure for checking failover status is:

Log in to the TMOS Shell (tmsh)

```
Run show /cm failover-status
```

Why the other options are incorrect:

A). list /cm failover shows configuration settings, not operational HA status.

B). show /sys failover is not the documented command for checking current failover status and does not align with F5's recommended procedure.

NEW QUESTION # 16

A BIG-IP Administrator is unable to connect to the management interface via HTTPS. What is a possible reason for this issue?

- A. The IP address of the device used to access the management interface is NOT included in the "P Allow" list in the Configuration Utility.
- B. The port lockdown setting is configured to Allow None.
- C. An incorrect management route is specified.
- D. The IP address of the device used to access the management interface is NOT included in the "httpd Allow" list in the CLI.

Answer: D

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Management connectivity is protected by an allowed access list for the httpd daemon. Unlike TMM data ports which use 'Port Lockdown' settings, the management port's access is controlled by a specific 'Allow' list323232. If an administrator's IP is not explicitly included in this list, the Control Plane will reject HTTPS connection attempts to the management utility33.

NEW QUESTION # 17

A BIG-IP Administrator needs to check the memory utilization on a BIG-IP system. Which two methods can the BIG-IP Administrator use? (Choose two.)

- A. Go to Statistics > Module Statistics > Traffic Summary in the configuration utility
- B. Go to Statistics > Module Statistics > Memory in the configuration utility
- C. Run the tmsh show /sys memory command
- D. Run the tmsh show /sys traffic command

Answer: B,C

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Reporting device status includes monitoring physical resource exhaustion, such as memory⁴⁸. The Control Plane provides both a command-line method via TMSH (show /sys memory) and a graphical method under Statistics > Module Statistics > Memory to report on how memory is allocated across TMM and the Linux host⁴⁹⁴⁹⁴⁹⁴⁹⁴⁹. This is essential for identifying potential "Aggressive Mode" triggers or hardware performance bottlenecks⁵⁰.

NEW QUESTION # 18

A BIG-IP Administrator defines a device Self IP. The Self IP is NOT reachable from the network. What should the administrator verify first?

- A. The correct VLAN has been selected.
- B. The correct Trunk has been selected.
- C. The correct Interface has been selected.
- D. Verify if auto last hop is disabled.

Answer: A

Explanation:

Connectivity management requires a proper logical-to-physical mapping within the BIG-IP Control Plane.

* VLAN Association: In TMOS, a Self IP address is not assigned directly to a physical interface. Instead, it is assigned to a VLAN (Virtual Local Area Network) object.

* Procedural Troubleshooting: If a Self IP is unreachable, the primary failure point is often that the IP was associated with the wrong VLAN, or the VLAN itself is not correctly associated with the intended physical interface or trunk.

* Layer 2 Mapping: The Control Plane requires the VLAN to be "up" and "untagged" or "tagged" on a valid interface for traffic to flow. If the administrator selects the incorrect VLAN, the Self IP will exist in the configuration but will be logically isolated from the physical network wire.

NEW QUESTION # 19

A BIG-IP Administrator makes a configuration change to the BIG-IP device. Which file logs the message regarding the configuration change?

- A. /var/log/messages
- B. /var/log/audit
- C. /var/log/secure
- D. /var/log/user.log

Answer: B

Explanation:

Audit logging is a specialized feature within TMOS designed to track administrative actions. According to F5 documentation, whenever a system object (like a virtual server, pool, or profile) is created, modified, or deleted, the system records the event. These logs are stored specifically in /var/log/audit. This is essential for control plane administration to track "who did what and when" regarding the device configuration.

NEW QUESTION # 20

.....

We even guarantee our customers that they will pass F5 F5CAB4 exam easily with our provided study material and if they failed to do it despite all their efforts they can claim a full refund of their money (terms and conditions apply). The third format is the desktop software format which can be accessed after installing the software on your Windows computer or laptop. The BIG-IP Administration Control Plane Administration (F5CAB4) has three formats so that the students don't face any serious problems and prepare themselves with fully focused minds.
