

Exam ARA-C01 Bible - Study Guide ARA-C01 Pdf

GIVE A BOOST TO YOUR PREPARATION FOR SNOWFLAKE ARA-C01 CERTIFICATION EXAM

ARA-C01 Practice Test and Preparation Guide

GET COMPLETE DETAIL ON ARA-C01 EXAM GUIDE TO CRACK SNOWPRO ADVANCED - ARCHITECT. YOU CAN COLLECT ALL INFORMATION ON ARA-C01 TUTORIAL, PRACTICE TEST, BOOKS, STUDY MATERIAL, EXAM QUESTIONS, AND SYLLABUS. FIRM YOUR KNOWLEDGE ON SNOWPRO ADVANCED - ARCHITECT AND GET READY TO CRACK ARA-C01 CERTIFICATION. EXPLORE ALL INFORMATION ON ARA-C01 EXAM WITH NUMBER OF QUESTIONS, PASSING PERCENTAGE AND TIME DURATION TO COMPLETE TEST.

BONUS!!! Download part of PassCollection ARA-C01 dumps for free: <https://drive.google.com/open?id=1o5cdanuAWIRx51md0YiOlx41028it5-Q>

The 21 century is the information century. So there are many changes in the field of the ARA-C01 exam questions. They are also transforming people's lives and the mode of operation of human society in a profound way. when you are preparing for an ARA-C01 exam, our company can provide the best electronic ARA-C01 Exam Torrent for you in this website. I strongly believe that under the guidance of our ARA-C01 test torrent, you will be able to keep out of troubles way and take everything in your stride.

By earning the SnowPro Advanced Architect Certification, professionals can demonstrate their expertise in Snowflake's advanced architecture and design principles, which can help them advance their careers and increase their earning potential. SnowPro Advanced Architect Certification certification program is recognized by top employers in the industry, and is a valuable asset for professionals who want to differentiate themselves in the competitive job market. Whether you are a data architect, data engineer, data analyst, or data scientist, the SnowPro Advanced Architect Certification can help you take your career to the next level.

Study Guide ARA-C01 Pdf & ARA-C01 Visual Cert Test

PassCollection is the best choice for those in preparation for exams. Many people have gained good grades after using our ARA-C01 real test, so you will also enjoy the good results. Our free demo of ARA-C01 training material provides you with the free renewal in one year so that you can keep track of the latest points happening in the world. As the questions of exams of our ARA-C01 Exam Torrent are more or less involved with heated issues and customers who prepare for the exams must haven't enough time to keep trace of exams all day long.

Snowflake SnowPro Advanced Architect Certification Sample Questions (Q132-Q137):

NEW QUESTION # 132

An Architect has designed a data pipeline that is receiving small CSV files from multiple sources. All of the files are landing in one location. Specific files are filtered for loading into Snowflake tables using the copy command. The loading performance is poor. What changes can be made to improve the data loading performance?

- A. Change the file format from CSV to JSON.
- B. Create a specific storage landing bucket to avoid file scanning.
- C. Increase the size of the virtual warehouse.
- D. Create a multi-cluster warehouse and merge smaller files to create bigger files.

Answer: D

Explanation:

According to the Snowflake documentation, the data loading performance can be improved by following some best practices and guidelines for preparing and staging the data files. One of the recommendations is to aim for data files that are roughly 100-250 MB (or larger) in size compressed, as this will optimize the number of parallel operations for a load. Smaller files should be aggregated and larger files should be split to achieve this size range. Another recommendation is to use a multi-cluster warehouse for loading, as this will allow for scaling up or out the compute resources depending on the load demand. A single-cluster warehouse may not be able to handle the load concurrency and throughput efficiently. Therefore, by creating a multi-cluster warehouse and merging smaller files to create bigger files, the data loading performance can be improved. Reference:

Planning a Data Load

NEW QUESTION # 133

Following objects can be cloned in snowflake

- A. External tables
- B. Permanent table
- C. Temporary table
- D. Internal stages
- E. Transient table

Answer: A,B,E

Explanation:

* Snowflake supports cloning of various objects, such as databases, schemas, tables, stages, file formats, sequences, streams, tasks, and roles. Cloning creates a copy of an existing object in the system without copying the data or metadata. Cloning is also known as zero-copy cloning¹.

* Among the objects listed in the question, the following ones can be cloned in Snowflake:

* Permanent table: A permanent table is a type of table that has a Fail-safe period and a Time Travel retention period of up to 90 days. A permanent table can be cloned using the CREATE TABLE ... CLONE command². Therefore, option A is correct.

* Transient table: A transient table is a type of table that does not have a Fail-safe period and can have a Time Travel retention period of either 0 or 1 day. A transient table can also be cloned using the CREATE TABLE ... CLONE command². Therefore, option B is correct.

* External table: An external table is a type of table that references data files stored in an external location, such as Amazon S3, Google Cloud Storage, or Microsoft Azure Blob Storage. An external table can be cloned using the CREATE EXTERNAL TABLE ... CLONE command³. Therefore, option D is correct.

* The following objects listed in the question cannot be cloned in Snowflake:

* Temporary table: A temporary table is a type of table that is automatically dropped when the session ends or the current user logs out. Temporary tables do not support cloning⁴. Therefore, option C is incorrect.

* Internal stage: An internal stage is a type of stage that is managed by Snowflake and stores files in Snowflake's internal cloud storage. Internal stages do not support cloning⁵. Therefore, option E is incorrect.

NEW QUESTION # 134

When activating Tri-Secret Secure in a hierarchical encryption model in a Snowflake account, at what level is the customer-managed key used?

- A. At the root level (HSM)
- **B. At the account level (AMK)**
- C. At the table level (TMK)
- D. At the micro-partition level

Answer: B

Explanation:

Tri-Secret Secure is a feature that allows customers to use their own key, called the customer-managed key (CMK), in addition to the Snowflake-managed key, to create a composite master key that encrypts the data in Snowflake. The composite master key is also known as the account master key (AMK), as it is unique for each account and encrypts the table master keys (TMKs) that encrypt the file keys that encrypt the data files. The customer-managed key is used at the account level, not at the root level, the table level, or the micro-partition level. The root level is protected by a hardware security module (HSM), the table level is protected by the TMKs, and the micro-partition level is protected by the file keys¹². References:

NEW QUESTION # 135

An Architect has been asked to clone schema STAGING as it looked one week ago, Tuesday June 1st at 8:00 AM, to recover some objects.

The STAGING schema has 50 days of retention.

The Architect runs the following statement:

CREATE SCHEMA STAGING_CLONE CLONE STAGING at (timestamp => '2021-06-01 08:00:00'); The Architect receives the following error: Time travel data is not available for schema STAGING. The requested time is either beyond the allowed time travel period or before the object creation time.

The Architect then checks the schema history and sees the following:

```
CREATED_ON|NAME|DROPPED_ON
2021-06-02 23:00:00 | STAGING | NULL
2021-05-01 10:00:00 | STAGING | 2021-06-02 23:00:00
```

How can cloning the STAGING schema be achieved?

- **A. Rename the STAGING schema and perform an UNDROP to retrieve the previous STAGING schema version, then run the CLONE statement.**
- B. Cloning cannot be accomplished because the STAGING schema version was not active during the proposed Time Travel time period.
- C. Undrop the STAGING schema and then rerun the CLONE statement.
- D. Modify the statement: CREATE SCHEMA STAGING_CLONE CLONE STAGING at (timestamp => '2021-05-01 10:00:00');

Answer: A

NEW QUESTION # 136

A Snowflake Architect created a new data share and would like to verify that only specific records in secure views are visible within the data share by the consumers.

What is the recommended way to validate data accessibility by the consumers?

- A. Create reader accounts as shown below and impersonate the consumers by logging in with their credentials.create managed account reader_acct admin_name = user1, admin_password # 'Sdfed43da! 44T, type = reader;
- B. Create a row access policy as shown below and assign it to the data share.create or replace row access policy rap_acct as (acct_id varchar) returns boolean -> case when 'acctl_role' = current_role() then true else false end;
- **C. Set the session parameter called SIMULATED_DATA_SHARING_CONSUMER as shown below in order to impersonate the consumer accounts.alter session set simulated_data_sharing_consumer -**

'Consumer Acct!'

- D. Alter the share settings as shown below, in order to impersonate a specific consumer account.alter share sales share set accounts = 'Consumer!' share restrictions = true

Answer: C

Explanation:

The SIMULATED_DATA_SHARING_CONSUMER session parameter allows a data provider to simulate the data access of a consumer account without creating a reader account or logging in with the consumer credentials. This parameter can be used to validate the data accessibility by the consumers in a data share, especially when using secure views or secure UDFs that filter data based on the current account or role. By setting this parameter to the name of a consumer account, the data provider can see the same data as the consumer would see when querying the shared database. This is a convenient and efficient way to test the data sharing functionality and ensure that only the intended data is visible to the consumers.
