Be certain about what you believe and consistent in what you say. If you intend to pass ISQI CPRE-FL_Syll_3.0 exam, you must take prompt action. Which is the best for your reference on the website? If you don't know how to choose your reference materials, we commend our Lead1Pass ISQI CPRE-FL_Syll_3.0 Study Guide to you. Lead1Pass ISQI CPRE-FL_Syll_3.0 certification training materials is the most complete. There is another advantage: we can provide you with free update for a year.

ISQI IREB Certified Professional for Requirements Engineering. Foundation Level Sample Questions (Q33-Q38):

NEW QUESTION # 33
Choose the correct sentence regarding phrase templates for requirements:

- A. Should is used for mandatory requirements.
- B. Even requirements using may are mandatory.
- C. Will is used for factual statements, not requirements.
- D. Shall is used for requirements that are strongly desired but not mandatory.

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
The handbook prescribes specific modal verbs: shall indicates a mandatory requirement-non-compliance means the system is not acceptable. Should denotes a desirable, but not strictly mandatory, property. May expresses an option or permission, not an obligation. Will is reserved for statements of fact or project constraints (e.g., "the system will run on hardware X"), not for normative requirements. Therefore only statement C correctly captures the recommended usage of "will"; A, B and D contradict the defined semantics of the modal verbs.

NEW QUESTION # 34
Select the two typically lowest abstraction levels among the following options.

- A. Component
- B. User
- C. Stakeholder
- D. Business
- E. System

Answer: A,E

NEW QUESTION # 35
Assess the following statements about the natural language documentation of requirements in terms of being applicable or not applicable. (2 Points)

Applies	Does not apply	
A	B	Natural language requirements cannot be misunderstood.
C	D	Natural language requirements are mainly suitable for the behavioral perspective.
E	F	Natural language requirements must be formulated in accordance with a template.
G	H	Natural language is not a suitable means of expression for quality requirements.
I	J	Natural language requirements are not a suitable means of communication for software architects and programmers.

Answer:

Explanation:
B, D, F, H, J

NEW QUESTION # 36

You are employed as a requirements engineer in a company that develops control software for electric motors.
During your work it becomes increasingly evident that the developers are very well aware of the necessary requirements, even though the requirements are not documented in their entirety. Nevertheless, you decide to document requirements systematically.
Which two of the following arguments justifies this step? (2 Points)
Documenting requirements systematically is important, because...

- A. ... non-documented requirements are difficult to negotiate between the stakeholders.
- B. ... the coverage of the requirements by means of test cases cannot be checked.
- C. ... documented requirements are also good requirements.
- D. ... implementation without documented requirements is not possible.

Answer: A,B

NEW QUESTION # 37

Which of the following requirements are NOT in accordance with the template "[] []"? (Select 2 answers.)

- A. Within 2 seconds, the system shall notify the administrator upon receiving a critical alert.
- B. When the temperature exceeds 80°C, the control unit shall shut down the heater for 10 minutes.
- C. If the user logs in, the system shall display the user's profile within 2 seconds.
- D. If the payment fails, the system shall display within 1 second.
- E. If the user selects 'Print' the printer shall generate a PDF file in less than 10 seconds.

Answer: A,D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
The phrase template specifies that an optional condition comes first, then subject, action, objects and finally an optional restriction. Options A-C respect this order and provide all elements: condition ("If/When ..."), subject ("system", "control unit", "printer"), action, object and a final restriction. In D the time restriction is placed at the beginning and the condition ("upon receiving a critical alert") is embedded incorrectly, violating the template's structure. In E, the object of the action ("what" the system shall display) is missing, so the sentence is incomplete. Thus, D and E do not comply.
