

Prep4King ISTQB ISTQB-CTFL Exam Questions are Real and Verified by Experts

P.S. Free & New ISTQB-CTFL dumps are available on Google Drive shared by Prep4King: <https://drive.google.com/open?id=1vtm0OUnd6thYkHgDwS17zC704z8TJCzY>

ISTQB-CTFL exam and they all got help from real and updated ISTQB ISTQB-CTFL exam questions. You can also be the next successful candidate for the ISTQB-CTFL certification exam. No doubt the ISTQB ISTQB-CTFL Certification Exam is one of the most difficult ISTQB certification exams in the modern ISTQB world. This ISTQB-CTFL exam always gives a tough time to their candidates.

Please believe that our Prep4King team have the same will that we are eager to help you pass ISTQB-CTFL exam. Maybe you are still worrying about how to prepare for the exam, but now we will help you gain confidence. By constantly improving our dumps, our strong technical team can finally take proud to tell you that our ISTQB-CTFL exam materials will give you unexpected surprises. You can download our free demo to try, and see which version of ISTQB-CTFL Exam Materials are most suitable for you; then you can enjoy your improvement in IT skills that our products bring to you; and the sense of achievement from passing the ISTQB-CTFL certification exam.

>> Valid ISTQB-CTFL Exam Online <<

100% Pass Quiz ISTQB-CTFL - Authoritative Valid ISTQB Certified Tester Foundation Level (CTFL v4.0) Exam Online

You have an option to try the ISTQB-CTFL exam dumps demo version and understand the full features before purchasing. You can download the full features of ISTQB-CTFL PDF Questions and practice test software right after the payment. Prep4King has created the three best formats of ISTQB-CTFL practice questions. These Formats will help you to prepare for and pass the ISTQB ISTQB-CTFL Exam. ISTQB-CTFL pdf dumps format is the best way to quickly prepare for the ISTQB-CTFL exam. You can open and use the ISTQB Certified Tester Foundation Level (CTFL v4.0) pdf questions file at any place. You don't need to install any software.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q199-Q204):

NEW QUESTION # 199

An Incident Management tool implements the following defect states; Open, Assigned, Solved, Closed Consider the following defect report:

Id T000561

Test Object "Warehouse Management" application

Tester name; John Bishop

Date: 10th. April 2010

Test Case MRT5581

Status OPEN

Severity Serious

Priority

Problem- After inputting the Total Quantity item = 450 in the SV034 screen, the system shows an unexpected Error message=47

Correction:

Developer name:

Closing date:

Which of the following is a valid criticism of this report?

- A. There is no link to the applicable requirement (traceability)
- B. The version of the application is missing
- C. The description is not highlighting the source of the problem
- D. The Priority, the Correction description and the Developer name are missing

Answer: B

Explanation:

A valid criticism of this report is that the version of the application is missing. The version of the application is an important piece of information that should be included in a defect report, as it helps to identify which release or build of the software product contains the defect. The version of the application can also help to reproduce and debug the defect, as different versions may have different behaviors or features. The other options are not valid criticisms of this report. The priority, the correction description and the developer name are not missing, but rather not applicable for this report. The priority is a measure of how urgently a defect needs to be fixed, which can be assigned by the project manager or the defect tracking system, not by the tester who reports the defect. The correction description and the developer name are information that are added after the defect has been resolved, not when it has been reported. There is no link to the applicable requirement (traceability) is not a valid criticism of this report, because traceability is not a mandatory attribute of a defect report, but rather an optional one. Traceability is a relationship between two or more entities (such as requirements, test cases, defects, etc.) that shows how they are related or dependent on each other. Traceability can help to verify that the requirements are met by the test cases and defects, but it is not essential for reporting a defect. The description is not highlighting the source of the problem is not a valid criticism of this report, because highlighting the source of the problem is not a responsibility of the tester who reports the defect, but rather of the developer who fixes the defect. The description should provide enough information to describe what happened when the defect occurred, such as input values, expected results, actual results, error messages, screenshots, etc., but it does not need to explain why or how it happened. NEW QUESTION # 200

The following 4 equivalence classes are given:

Which of the following alternatives includes correct test values for x, based on equivalence partitioning?

- A. -99; 99:101; 1001
- B. -1000; -100; 100; 1000
- C. -100; 100:1000; 1001
- D. -500; 0; 100; 1000

Answer: B

Explanation:

The question is about selecting the correct test values for x based on equivalence partitioning. Equivalence partitioning is a software test design technique that divides the input data of a software unit into partitions of equivalent data from which test cases can be derived. In this case, the given equivalence classes are:

$(x \leq -100)$

$(-100 < x < 100)$

$(100 \leq x < 1000)$

$(x \geq 1000)$

Option D provides a value from each of these partitions:

For $(x \leq -100)$, it gives -1000.

For $(-100 < x < 100)$, it gives -100 and 100.

For $(100 \leq x < 1000)$, it gives 500.

For $(x \geq 1000)$, it gives 1500.

So, option D covers all four given equivalence classes with appropriate values.

NEW QUESTION # 201

Which of the following statements about exploratory testing is true?

- A. In exploratory testing, testers usually produce scripted tests and establish bidirectional traceability between these tests and the items of the test basis
- B. When exploratory testing is conducted following a session-based approach, the issues detected by the testers can be documented in session sheets
- C. Exploratory testing is an experience-based test technique in which testers explore the requirements specification to detect non testable requirements
- D. Exploratory testing is an experience-based test technique used by testers during informal code reviews to find defects by exploring the source code

Answer: B

Explanation:

Exploratory testing is an experience-based test technique in which testers dynamically design and execute tests based on their knowledge, intuition, and learning of the software system, without following predefined test scripts or test cases. Exploratory testing can be conducted following a session-based approach, which is a structured way of managing and measuring exploratory testing. In a session-based approach, the testers perform uninterrupted test sessions, usually lasting between 60 and 120 minutes, with a specific charter or goal, and document the issues detected, the test coverage achieved, and the time spent in session sheets. Session sheets are records of the test activities, results, and observations during a test session, which can be used for reporting, debriefing, and learning purposes. The other statements are false, because:

* Exploratory testing is not a test technique in which testers explore the requirements specification to detect non testable requirements, but rather a test technique in which testers explore the software system to detect functional and non-functional defects, as well as to learn new information, risks, or opportunities. Non testable requirements are requirements that are ambiguous, incomplete, inconsistent, or not verifiable, which can affect the quality and effectiveness of the testing process. Non testable requirements can be detected by applying static testing techniques, such as reviews or inspections, to the requirements specification, before the software system is developed or tested.

* Exploratory testing is not a test technique used by testers during informal code reviews to find defects by exploring the source code, but rather a test technique used by testers during dynamic testing to find defects by exploring the behavior and performance of the software system, without examining the source code. Informal code reviews are static testing techniques, in which the source code is analyzed by one or more reviewers, without following a formal process or using a checklist, to identify defects, violations, or improvements. Informal code reviews are usually performed by developers or peers, not by testers.

* In exploratory testing, testers usually do not produce scripted tests and establish bidirectional traceability between these tests and the items of the test basis, but rather produce unscripted tests and adapt them based on the feedback and the findings of the testing process. Scripted tests are tests that are designed and documented in advance, with predefined inputs, outputs, and expected results, and are executed according to a test plan or a test procedure. Bidirectional traceability is the ability to trace both forward and backward the relationships between the items of the test basis, such as the requirements, the design, the risks, etc., and the test artifacts, such as the test cases, the test results, the defects, etc.

* Scripted tests and bidirectional traceability are usually associated with more formal and structured testing approaches, such as specification-based or structure-based test techniques, not with exploratory testing. NEW QUESTION # 202

Which of the following best describes the relationship between a test progress report and a test summary report?

- A. The test report prepared during a test activity may be referred to as a test progress report, while a test report prepared at the end of a test activity may be referred to as a test summary report.
- B. Both the test progress report and the test summary report should always be generated via an automated tool.
- C. There is no difference between a test progress report and a test summary report.
- D. The test report prepared during a test activity may be referred to as a test summary report, while a test report prepared at the end of a test activity may be referred to as a test progress report.

Answer: A

NEW QUESTION # 203

Which of the following is a good testing practice which is applicable INDEPENDENT of the software development lifecycle followed?

- A. Reviews should be done after the work products have been finalized
- **B. Each test level should have an appropriate test objective**
- C. Not all development activities should have corresponding test activities
- D. Large amount of redundancy between test levels is good because it prevents bug leakage

Answer: B

NEW QUESTION # 204

.....

The scoring system of our ISTQB-CTFL exam torrent absolutely has no problem because it is intelligent and powerful. First of all, our researchers have made lots of efforts to develop the scoring system. So the scoring system of the ISTQB-CTFL test answers can stand the test of practicability. Once you have submitted your practice. The scoring system will begin to count your marks of the ISTQB-CTFL exam guides quickly and correctly. You just need to wait a few seconds before knowing your scores. The scores are calculated by every question of the ISTQB-CTFL Exam guides you have done. So the final results will display how many questions you have answered correctly and mistakenly. You even can directly know the score of every question, which is convenient for you to know the current learning condition.
