Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q158-Q163):

NEW QUESTION # 158

A company runs a website on Amazon EC2 instances. Users can upload images to an Amazon S3 bucket and publish the images to the website. The company wants to deploy a serverless image-processing application that uses an AWS Lambda function to resize the uploaded images.

The company's development team has created the Lambda function. A SysOps administrator must implement a solution to invoke the Lambda function when users upload new images to the S3 bucket.

Which solution will meet this requirement?

- A. Configure an Amazon Simple Notification Service (Amazon SNS) topic to invoke the Lambda function when a user uploads a new image to the S3 bucket.
- B. Configure an Amazon Simple Queue Service (Amazon SQS) queue to invoke the Lambda function when a user uploads a new image to the S3 bucket.
- **C. Configure S3 Event Notifications to invoke the Lambda function when a user uploads a new image to the S3 bucket.**
- D. Configure an Amazon CloudWatch alarm to invoke the Lambda function when a user uploads a new image to the S3 bucket.

Answer: C

Explanation:

S3 Event Notifications can directly trigger a Lambda function on object-created events, letting the resize code run automatically whenever a new image is uploaded. This is the native, serverless integration required.

NEW QUESTION # 159

A company uses AWS Organizations to manage its multi-account environment. The organization contains a dedicated account for security and a dedicated account for logging. A SysOps administrator needs to implement a centralized solution that provides alerts when a resource metric in any account crosses a standard defined threshold.

Which solution will meet these requirements?

- A. Deploy an AWS CloudFormation stack in each account. Use the stack to deploy the required Amazon CloudWatch alarms and the required Amazon Simple Notification Service (Amazon SNS) topic.
- **B. Deploy an AWS CloudFormation stack set to the accounts in the organization. Use a template that creates the required Amazon CloudWatch alarms and references an Amazon Simple Notification Service (Amazon SNS) topic in the logging account with publish permissions for all the accounts.**
- C. Deploy an AWS CloudFormation change set to the organization. Use a template to create the required Amazon CloudWatch alarms and to send alerts to a verified Amazon Simple Email Service (Amazon SES) identity.
- D. Deploy an AWS Lambda function on a cron job in each account. Configure the Lambda function to read resources that are in the account and to invoke an Amazon Simple Notification Service (Amazon SNS) topic if any metrics cross the defined threshold.

Answer: B

Explanation:

To implement a centralized solution for monitoring resource metrics and receiving alerts across multiple accounts in an AWS Organizations environment, using AWS CloudFormation stack sets is a suitable approach.

NEW QUESTION # 160

An Amazon S3 Inventory report reveals that more than 1 million objects in an S3 bucket are not encrypted.

These objects must be encrypted, and all future objects must be encrypted at the time they are written.

Which combination of actions should a SysOps administrator take to meet these requirements? (Choose two.)

- A. Filter the S3 Inventory report by using S3 Select to find all objects that are not encrypted. Send each object name as a message to an Amazon Simple Queue Service (Amazon SQS) queue. Use the SQS queue to invoke an AWS Lambda function to tag each object with a key of "Encryption" and a value of "SSE-KMS".
- B. Filter the S3 Inventory report by using S3 Select to find all objects that are not encrypted. Create an S3 Batch Operations job to copy each object in place with encryption enabled.
- C. Use S3 Event Notifications to invoke an AWS Lambda function on all new object-created events for the S3 bucket. Configure the Lambda function to check whether the object is encrypted and to run an AWS Systems Manager Automation document to encrypt the object in place when an unencrypted object is found.
- D. Create an AWS Config rule that runs evaluations against configuration changes to the S3 bucket. When an unencrypted object is found, run an AWS Systems Manager Automation document to encrypt the object in place.
- E. Edit the properties of the S3 bucket to enable default server-side encryption.

Answer: C,E

NEW QUESTION # 161

A company manages an application that uses Amazon ElastiCache for Redis with two extra-large nodes spread across two different Availability Zones.

The company's IT team discovers that the ElastiCache for Redis cluster has 75% freeable memory. The application must maintain high availability.

What is the MOST cost-effective way to resize the cluster?

- A. Deploy a new ElastiCache for Redis cluster that uses large node types. Take a backup from the original cluster, and restore the backup in the new cluster. After the process is complete, shut down the original cluster.
- B. Perform an online resizing for the ElastiCache for Redis cluster. Change the node types from extralarge nodes to large nodes.
- C. Decrease the number of nodes in the ElastiCache for Redis cluster from 2 to 1.
- D. Deploy a new ElastiCache for Redis cluster that uses large node types. Migrate the data from the original cluster to the new cluster. After the process is complete, shut down the original cluster.

Answer: B

NEW QUESTION # 162

A company maintains a large set of sensitive data in an Amazon S3 bucket. The company's security team asks a SysOps administrator to help verify that all current objects in the S3 bucket are encrypted.

What is the MOST operationally efficient solution that meets these requirements?

- A. Provide the security team with an IAM user that has read access to the S3 bucket.
- B. Create an S3 Inventory configuration on the S3 bucket. Induce the appropriate status fields.
- C. Use the AWS CLI to output a list of all objects in the S3 bucket.
- D. Create a script that runs against the S3 bucket and outputs the status of each object.

Answer: C
