You can easily track your performance while preparing for the Salesforce Certified Sharing and Visibility Architect exam with the help of a self-assessment report shown at the end of Salesforce Sharing-and-Visibility-Architect practice test.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q31-Q36):

NEW QUESTION # 31

A support representative at Universal Containers created a report to view all her open cases that have been created in the past 7 days and saved the report in the "Private Reports" folder.

Who can view and run the report?

- A. The report owner and any users who have been given access to the "My Private Reports" folder
- B. The report owner and users with the View All Data permission
- C. The report owner

Answer: C

Explanation:

* Reports saved in the Private Reports folder are only accessible to the user who created them. This folder is meant for personal use, and other users cannot access or view reports saved here, regardless of their permissions.

* Why Option A is Correct: Only the report owner can view and run reports saved in the "Private Reports" folder.

* Why Others Are Incorrect:

* Option B: There is no way to share reports in the "Private Reports" folder with other users.

* Option C: Even users with "View All Data" permission cannot access reports in the "Private Reports" folder.

For further details, refer to Salesforce Report and Dashboard Sharing documentation: <https://help.salesforce.com/>

NEW QUESTION # 32

Universal Containers (UC) has 600 sales reps. UC has rollout plan to deploy salesforce in 3 weeks. At the end of the second week, they received a "User Role Limit Exceeded" error.

After investigation, they discovered that during the user provisioning process, a new role was generated for every new user.

Which two recommendations could solve this problem?

Choose 2 answers.

- A. Create an Apex class to replace the User Roles by generic one as soon as they are created.
- B. Review the user provisioning process to not automatically create a user role for any new user.
- C. Contact salesforce support and request to increase the number of users' roles allowed.
- D. Remove role hierarchy from salesforce org and control the record access using apex managed sharing.

Answer: B,C

Explanation:

Explanation

Reviewing the user provisioning process to not automatically create a user role for any new user and contacting Salesforce support and requesting to increase the number of users' roles allowed are two recommendations that could solve this problem. Salesforce has a limit on the number of roles that can be created in an organization, which depends on the edition and the number of licenses. If this limit is reached, no more roles can be created unless the limit is increased by Salesforce support. Therefore, it is not advisable to create a new role for every new user, as this would quickly exhaust the limit and cause the "User Role Limit Exceeded" error. Option B is incorrect, since removing role hierarchy from Salesforce org and controlling the record access using Apex managed sharing would be a complex and custom solution that would not address the root cause of the problem. Option D is incorrect, since creating an Apex class to replace the User Roles by generic one as soon as they are created would be unnecessary and inefficient.

NEW QUESTION # 33

To grant Universal Containers sales managers access to shipment records properly, it was necessary to leverage Apex managed sharing. The IT team is worried about improper access to records. What should an architect recommend to mitigate this risk?

- A. Use isAccessible keyword in Apex classes to assure record visibility will be followed.
- **B. Use runAs system method in test classes to test using different users and profiles.**
- C. Use isSharesble keyword in Apex classes to assure record visibility will be followed.

Answer: B

NEW QUESTION # 34

Universal Containers has a requirement to share Accounts automatically to the users at a field office. They currently have the following setup in their environment:

- * Accounts are set to Private in the Org-Wide Default.
- * The field office is specified by a lookup in the Account object.
- * There are 400 field offices.
- * The users in each field office are managed using public groups.

Based upon a lookup relationship field on the Account, how should the Architect meet this requirement?

- A. Use Criteria-Based Sharing to share the Account with the appropriate field office.
- **B. Use Programmatic Sharing to share the Account with the appropriate field office.**
- C. Use Manual Sharing to share the Account with the appropriate field office.
- D. Use Account Teams to share the Account with the appropriate field office.

Answer: B

NEW QUESTION # 35

Sales reps at Universal Containers (UC) complain about the manual activities they need to perform in order to grant access to supporting internal users (legal, engineering, finance, etc.) for customer records when they need help. In general, the sales reps involved in the deals will not change.

How should an architect help UC improve sales reps' productivity?

- A. Create a permission set with View All Data and assign to supporting users.
- **B. Leverage default Account team**
- C. Create a criteria based sharing rule to grant access to other users.

Answer: B

NEW QUESTION # 36

.....

As the quick development of the world economy and intense competition in the international, the world labor market presents many new trends: company's demand for the excellent people is growing.
