API Pressure Vessel Inspector Sample Questions (Q46-Q51):

NEW QUESTION # 46

One of the steps when rerating a pressure vessel is the documentation of the:

- A. Approval of the ASME
- B. Report from an external professional engineer
- C. Calculations from the manufacturer or the owner-user's engineer
- D. Approval of the operation's engineering department

Answer: C

NEW QUESTION # 47

Term "E" used in shell thickness formula in AWE Sec. VIII Div.1, represents weld joint efficiency, whose value is equal to "1", if:

- A. Longitudinal welds are radio graphed for their entire length and circumferential welds are spot radio graphed.
- B. Longitudinal and circumferential welds are radio graphed for their entire length
- C. Both a and b
- D. Both welds are spot radio graphed

Answer: A

Explanation:

circumferential just need a spot radiography to attain joint efficiency of "1" but longitudinal welds undergo a hoop stress as well and roughly twice of the stress applied on a circumferential joint and hence require full radiography to attain a joint efficiency of "1".

NEW QUESTION # 48

API-510 mandates the consideration of which factors for rerating a pressure vessel?

- A. Corrosion rates and materials of construction
- B. Only the original design criteria
- C. Design temperature, pressure, and material properties
- D. Design temperature and pressure only

Answer: C

NEW QUESTION # 49

How does API-510 facilitate the integration of new inspection technologies into the established inspection routines for pressure vessels?

Answer:

Explanation:

API-510 facilitates the integration of new inspection technologies by providing a framework that allows for the adoption of advanced methods as they are proven effective and reliable. The standard encourages ongoing research and validation of new technologies, such as phased array ultrasonic testing and digital radiography, and outlines criteria for their implementation in routine inspections. This progressive approach ensures that the inspection practices remain state-of-the-art and can adapt to the evolving demands of modern pressure vessel management.

NEW QUESTION # 50

What is the maximum inspection interval for a vessel with a remaining safe operating life of less than four years?

- A. The full remaining safe operating life up to a maximum of 4 years
- B. The full remaining safe operating life up to a maximum of 2 years
- C. The full remaining safe operating life up to a maximum of 1 year
- D. The full remaining life of the vessel

Answer: A

NEW QUESTION # 51
