Today is the right time to learn new and in demands skills. You can do this easily, just get registered in certification exam and start preparation with Nutanix Certified Professional - Cloud Integration - AWS NCP-CI-AWS exam dumps. The Nutanix Certified Professional - Cloud Integration - AWS NCP-CI-AWS pdf questions and practice test are ready for download. Just pay the affordable NCP-CI-AWS authentic dumps charges and click on the download button. Get the NCP-CI-AWS latest dumps and start preparing today.

Nutanix NCP-CI-AWS Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Deploying an NC2 on AWS Environment: This portion assesses your knowledge of cloud cluster deployment, cloud provider network configuration, and your skills in addressing cluster deployment challenges.
Topic 2	<ul style="list-style-type: none"> Configuring an NC2 on AWS Environment: This section examines your proficiency in setting up cloud networking and security measures, as well as addressing connectivity issues.

Topic 3	<ul style="list-style-type: none"> Managing an NC2 on AWS Environment: This exam component tests your understanding of node and cluster management tasks, along with your ability to oversee cluster and cloud resource health.
Topic 4	<ul style="list-style-type: none"> Prepare the AWS cloud environment: This exam segment evaluates your ability to set up the AWS cloud environment, initiate NC2 service subscription, establish implementation criteria, and recognize networking prerequisites.

NCP-CI-AWS - Nutanix Certified Professional - Cloud Integration - AWS – Valid New Braindumps Sheet

For candidates who are going to buy NCP-CI-AWS exam dumps online, they may pay more attention to the website safety. We will offer you a clean and safe online shopping environment if you buy NCP-CI-AWS training materials from us. In addition, we offer you free demo for you to have a try before buying, so that you can know what the complete version is like. We have online and offline chat service stuff, and they possess the professional knowledge for NCP-CI-AWS Exam Braindumps, if you have any questions, you can consult us.

Nutanix Certified Professional - Cloud Integration - AWS Sample Questions (Q16-Q21):

NEW QUESTION # 16

What are the supported NC2 on AWS instance types?

- A. i4i.4xlarge, i3.8xlarge, i7ie.2xlarge
- B. i3.metal, i3en.metal, i4i.metal
- C. i7ie.24xlarge, i4i.32xlarge, i3.12xlarge
- D. i3.metal, t2.micro, g4dn.xlarge, M5d.medium

Answer: B

NEW QUESTION # 17

Which service enables the monitoring of key metrics on various AWS services, including EC2, EBS, and VPC for an NC2 cluster deployments?

- A. Amazon CloudWatch
- B. AWS CloudFormation
- C. Amazon inspector
- D. AWS CloudTrail

Answer: A

Explanation:

Amazon CloudWatch is the service that enables the monitoring of key metrics on various AWS services, including EC2, EBS, and VPC, for NC2 cluster deployments.

Amazon CloudWatch:

Amazon CloudWatch provides monitoring for AWS cloud resources and applications. It collects and tracks metrics, collects and monitors log files, and sets alarms.

Specifically, for NC2 deployments, CloudWatch can be used to monitor key metrics such as CPU utilization, disk I/O, network I/O for EC2 instances, EBS volume performance, and VPC network traffic.

Features:

Metrics Monitoring: Collects and visualizes operational data in the form of metrics, including utilization, performance, and health.

Logs Monitoring: Collects log data, monitors it in real-time, and triggers alarms based on predefined thresholds.

Alarms: Notifies when operational performance thresholds are breached.

Integration with NC2:

By setting up CloudWatch, administrators can ensure they have visibility into the performance and health of their Nutanix clusters on

AWS, aiding in proactive management and troubleshooting

NEW QUESTION # 18

An administrator has created an NC2 cluster on AWS, but the NC2 console has issued this alert:

Which two scenarios could have resulted in the cluster creation failure? (Choose two.)

- A. No available AWS credits
- B. Insufficient permissions
- C. AWS Quota exceeded/instance limit exceeded
- D. Bad Terraform (TF) state in provisioning

Answer: B,C

Explanation:

The error message in the image indicates that the cluster creation failed due to reaching the maximum retries for provisioning cluster nodes. Here are two possible scenarios that could lead to this issue:

Insufficient Permissions (Answer B):

If the AWS user or role used to create the cluster does not have sufficient permissions, it can result in failures during the provisioning process. Proper IAM policies must be attached to ensure that the necessary actions can be performed, such as launching instances, creating VPCs, or managing networking components.

AWS Quota Exceeded/Instance Limit Exceeded (Answer D):

AWS imposes quotas and limits on the number of instances and other resources that can be created within an account. If these quotas are exceeded, new instances cannot be provisioned, causing the cluster creation to fail. This can be resolved by requesting a quota increase from AWS.

NEW QUESTION # 19

What is the purpose of an organization in the NC2 console?

- A. To segregate clusters based on specific requirements
- B. To link with NC2 subscription plans
- C. To Link with a Public Cloud account
- D. To map the on-premises Prism Central environment

Answer: A

Explanation:

In the NC2 console, an organization is used to segregate clusters based on specific requirements. This segregation allows administrators to manage clusters more effectively by grouping them according to business units, projects, or other criteria. This organizational structure helps in maintaining clear boundaries and applying specific policies or permissions to different clusters within the same NC2 environment.

NEW QUESTION # 20

During the recovery of entities protected by Cluster Project, an administrator discovers that the recovery plan is not executing correctly because it exceeds the number of supported entities.

How many entities can be recovered using a Single recovery plan?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

The Nutanix disaster recovery capabilities include recovery plans that define how entities are recovered in the event of a failure. There is a limit to the number of entities that can be managed within a single recovery plan.

Entity Limit:

According to Nutanix documentation, the maximum number of entities that can be recovered using a single recovery plan is 300. Exceeding this limit will cause issues during the execution of the recovery plan.

Impact of Exceeding the Limit:

If the number of entities in a recovery plan exceeds the supported limit, the recovery process may fail or not execute correctly, as observed in the scenario.
