Administration Professional 2201 Real Test

Do you know why you feel pressured to work? That is because your own ability and experience are temporarily unable to adapt to current job requirements. To bur our EAEP2201 practice engine at this time is to upgrade your skills and experience to the current requirements in order to have the opportunity to make the next breakthrough. And our EAEP2201 Exam Braindumps are good to help you in developing your knowledge and skills. Besides, our EAEP2201 study guide will reward you with the certification.

Esri EAEP2201 certification is highly valued by employers and provides a competitive edge in the job market. It is a testament to a candidate's expertise in administering and maintaining ArcGIS Enterprise solutions, which are essential for organizations that rely on geospatial data. Enterprise Administration Professional 2201 certification also serves as a stepping stone for professionals who want to advance their careers in geospatial technology. Individuals who pass the Esri EAEP2201 Exam can pursue a variety of career paths, including GIS administrator, GIS analyst, and geospatial solutions architect. Overall, the Esri EAEP2201 certification is an excellent way to demonstrate a candidate's proficiency in ArcGIS Enterprise administration and enhance their professional credibility.

Esri Enterprise Administration Professional 2201 Sample Questions (Q49-Q54):

NEW QUESTION # 49

An organization recently upgraded Portal for ArcGIS. The organization must reduce the number of named users to the maximum allowed by the authorization file and delete members in bulk.

Which action should the administrator perform?

- A. Batch delete users with ArcPy
- **B. Use command line utilities**
- C. Delete users using the Member tab

Answer: B

Explanation:

The most efficient and supported method for managing and removing multiple users after a Portal for ArcGIS upgrade is by using command line utilities, specifically the deleteusers utility included with Portal for ArcGIS. This tool allows administrators to batch delete user accounts by referencing a file that lists usernames. This method is especially useful when needing to quickly reduce the number of named users to comply with licensing restrictions.

Deleting users individually via the Member tab (Option B) is time-consuming and inefficient when dealing with large numbers of accounts. Using ArcPy (Option C) is not supported for managing Portal users in bulk.

NEW QUESTION # 50

A GIS administrator receives reports of slow-performing services and notices that disk space is filling up after recent troubleshooting sessions.

In those sessions, the following tasks were performed:

- * Services added to the shared instance pool
- * Log retention settings reduced
- * Log level set to Debug
- * ArcGIS Server machine restarted
- * An additional ArcGIS Server site federated

What is causing this slow performance?

- **A. Additional services in the shared instance pool**
- B. Federating the additional ArcGIS Server site
- C. Restarting ArcGIS Server
- D. Adjusting the log level to Debug

Answer: A

NEW QUESTION # 51

A GIS administrator needs to change the ownership of a shared update group to a different user. The administrator receives an error

message: "Unable to reassign the group at this time." What is causing this error?

- A. The sharing settings on the group are configured incorrectly
- B. It is not possible to reassign ownership of shared update groups
- **C. The user does not have the correct privileges**

Answer: C

Explanation:

The error message "Unable to reassign the group at this time" typically occurs when attempting to transfer ownership of a shared update group to a user who lacks the necessary privileges. Specifically, the new owner must have the privilege to create and own groups. If the user's role does not include this privilege, the ownership transfer will fail. To resolve this, ensure that the user has a role (either default or custom) that includes the privilege to create groups.

NEW QUESTION # 52

In a multi-machine ArcGIS Server site, the following is observed:

- * Random services missing on one server but reappear later
- * Intermittent service failures
- * Warnings and severe errors like:
 - * Failed to write heartbeat
 - * Error synchronizing with config store
 - * Failed to return all folder configurations
 - * Failed to return all services configurations in folder

What should the administrator review?

- A. ArcGIS Server virtual machine resources
- B. Network DNS cache
- **C. Specification for the file share location**
- D. ArcGIS Server patches applied

Answer: C

Explanation:

These errors point to problems accessing the configuration store, which is commonly stored on a shared file location across ArcGIS Server machines. Intermittent access, latency, or I/O issues with the shared drive can cause synchronization failures and service visibility problems.

From Esri documentation:

"If ArcGIS Server cannot reliably access the configuration store, errors such as heartbeat failure, sync issues, and missing service configurations may occur. Always ensure the shared file location is on a reliable, supported file system with proper permissions and stability."

* Option A (VM resources) might impact general performance but not sync reliability.

* Option C (patches) is important but doesn't fix shared drive instability.

* Option D is not relevant in this context.

NEW QUESTION # 53

A GIS administrator must configure ArcGIS Server so that only specific groups and roles from the identity store can administer it. Which action should the administrator perform?

- A. Define the shared key used to generate an ArcGIS token
- **B. Disable the primary administrator account**
- C. Configure role-based access through the ArcGIS Server Manager
- D. Use a group-managed service account to administer the server

Answer: B

Explanation:

The primary site administrator account in ArcGIS Server is a built-in account that bypasses external identity store configurations. To ensure only users from a configured identity store (e.g., Active Directory) can administer the site, the primary site admin account must

bedisabledafter alternative administrative access has been confirmed.

From ArcGIS Server documentation:

"After you configure your ArcGIS Server to use users and roles from an identity store (LDAP or Active Directory), you can disable the primary site administrator account to prevent bypassing the identity store."

* OptionBrelates to token security, not access control.

* OptionCis about running the service securely, not defining user permissions.
