You need to update the app to meet the following requirements:

- * Use the Export feature in the app without requiring a restart of the app.
- * Validate users before users are allowed access to secure resources.
- * Permit users to access secure resources.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

```
public void Configure(IApplicationBuilder app, IWebHostEnvironment env)
{
    if (env.IsDevelopment())
    {
        app.UseDeveloperExceptionPage();
    }
    else
    {

    app.UseEndpoint(endpoints =>
    {
        endpoints.MapRazorPages();
    });
}
```

Explanation:

Box 1: UseAuthentication

Need to validate users before users are allowed access to secure resources.

UseAuthentication adds the AuthenticationMiddleware to the specified IApplicationBuilder, which enables authentication capabilities.

Box 2: UseAuthorization

Need to permit users to access secure resources.

UseAuthorization adds the AuthorizationMiddleware to the specified IApplicationBuilder, which enables authorization capabilities.

Box 3: UseStaticFiles

Need to use the Export feature in the app without requiring a restart of the app.

UseStaticFiles enables static file serving for the current request path Reference:

問題 #432

You are using Azure Front Door Service.

You are expecting inbound files to be compressed by using Brotli compression. You discover that inbound XML files are not compressed. The files are 9 megabytes (MB) in size.

You need to determine the root cause for the issue.

To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

解題說明:

Statement	Yes	No
The file MIME type is supported by the service.	☐	☐
Edge nodes must be purged of all cache assets.	☐	☐
The compression type is supported.	☐	☐

Explanation

Statement	Yes	No
The file MIME type is supported by the service.	☐	☐
Edge nodes must be purged of all cache assets.	☐	☐
The compression type is supported.	☐	☐

Box 1: No

Front Door can dynamically compress content on the edge, resulting in a smaller and faster response to your clients. All files are eligible for compression. However, a file must be of a MIME type that is eligible for compression list.

Box 2: No

Sometimes you may wish to purge cached content from all edge nodes and force them all to retrieve new updated assets. This might be due to updates to your web application, or to quickly update assets that contain incorrect information.

Box 3: Yes

These profiles support the following compression encodings: Gzip (GNU zip), Brotli Reference:

Topic 8, Munson's Pickles and Preserves Farm

Overview

Munson's Pickles and Preserves Farm is an agricultural cooperative corporation based in Washington, US, with farms located

across the United States. The company supports agricultural production resources by distributing seeds, fertilizers, chemicals, fuel, and farm machinery to the farms.

The company is migrating all applications from an on-premises datacenter to Microsoft Azure. Applications support distributors, farmers, and internal company staff.

Corporate website

- * The company hosts a public website located at <http://www.munsonspicklesandpreservesfarm.com>. The site supports farmers and distributors who request agricultural production resources.

Farms

- * The company created a new customer tenant in the Microsoft Entra admin center to support authentication and authorization for applications.

Distributors

- * Distributors integrate their applications with data that is accessible by using APIs hosted at <http://www.munsonspicklesandpreservesfarm.com/api> to receive and update resource data.

The application components must meet the following requirements:

Corporate website

- * The site must be migrated to Azure App Service.

- * Costs must be minimized when hosting in Azure.

- * Applications must automatically scale independent of the compute resources.

- * All code changes must be validated by internal staff before release to production.

- * File transfer speeds must improve, and webpage-load performance must increase.

- * All site settings must be centrally stored, secured without using secrets, and encrypted at rest and in transit.

- * A queue-based load leveling pattern must be implemented by using Azure Service Bus queues to support high volumes of website agricultural production resource requests.

Farms

- * Farmers must authenticate to applications by using Microsoft Entra ID.

Distributors

- * The company must track a custom telemetry value with each API call and monitor performance of all APIs.

- * API telemetry values must be charted to evaluate variations and trends for resource data.

Internal staff

- * App and API updates must be validated before release to production.

- * Staff must be able to select a link to direct them back to the production app when validating an app or API update.

- * Staff profile photos and email must be displayed on the website once they authenticate to applications by using their Microsoft Entra ID.

Security

- * All web communications must be secured by using TLS/HTTPS.

- * Web content must be restricted by country/region to support corporate compliance standards

- * The principle of least privilege must be applied when providing any user rights or process access rights

- * Managed identities for Azure resources must be used to authenticate services that support Microsoft Entra ID authentication.

Corporate website

- * Farmers report HTTP 503 errors at the same time as internal staff report that CPU and memory usage are high.

- * Distributors report HTTP 502 errors at the same time as internal staff report that average response times and networking traffic are high.

- * Internal staff report webpage load sizes are large and take a long time to load.

- * Developers receive authentication errors to Service Bus when they debug locally.

Distributors

- * Many API telemetry values are sent in a short period of time. Telemetry traffic, data costs, and storage costs must be reduced while preserving a statistically correct analysis of the data points sent by the APIs.
