Peoplecert PeopleCert DevOps Site Reliability Engineer (SRE) Sample Questions (Q63-Q68):

NEW QUESTION # 63

Which of the following is the BEST example of an SRE team that embraces full-service ownership?

- A. The team is responsible for application performance and reliability aspects.

- B. The team is accountable for coding shipping and improving the application
- C. The team is responsible for the cooing and improvement of me application.
- D. The team is accountable for the application development and performance.

Answer: B

NEW QUESTION # 64

Which of the following BEST describes the capabilities and scope of DevOps continuous monitoring?

- A. The combination of tools and the process for a rapid incident detection and response of cloud services
- B. The application of widespread system event monitoring by automating the end user transactions
- C. The use of multiple monitoring tools and an eventmanagement process for all applications
- D. The deployment of a set of integrated monitoring tools and event thresholds for infrastructure

Answer: D

NEW QUESTION # 65

What does the Westrum model study?

- A. The flow of information and how it affects organizational culture
- B. The flow of critical resources necessary to recover in the event of a major incident
- C. The flow of communication and how it affects organizational design
- D. The flow of technology in order to deploy faster and more frequently

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The Westrum Organizational Culture Model categorizes organizations based on how effectively they allow information to flow, particularly in high-risk and high-performance environments. This model is widely referenced in SRE and DevOps practices and is cited by Google in their SRE culture guidance.

The Westrum model identifies three culture types:

- * Pathological (power-oriented)
- * Bureaucratic (rule-oriented)
- * Generative (performance-oriented)

From the SRE Workbook and Google's DevOps Research (DORA):

"The Westrum model is a taxonomy of organizational cultures based on how information flows. Generative cultures-with high cooperation and open information flow-correlate with higher reliability and better outcomes." Why the other options are incorrect:

- * A Deployment frequency is a DORA metric, not Westrum's focus.
- * C Resource flow is unrelated to Westrum.
- * D While communication affects design, Westrum specifically studies information flow as a cultural health indicator, not structural design.

Thus, the correct answer is B.

NEW QUESTION # 66

Identify the defense depth (DiD) layer where data flows in from, and out to, other networks, including the Internet

- A. Data layer
- B. Physicallayer
- C. Perimeter layer
- D. Host layer

Answer: B

NEW QUESTION # 67

Identify the missing word(s) in the following sentence:

Site reliability engineering is a _____ approach to IT operations.

- A. simulation engineering
- B. structural engineering
- C. security engineering
- D. software engineering

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Google's SRE definition is explicit: "Site Reliability Engineering is what happens when you ask a software engineer to design an operations team." (SRE Book - Introduction). This clearly defines SRE as a software engineering approach applied to operational problems. The goal is to use software techniques-automation, coding, testing, version control, CI/CD, observability-to improve reliability and reduce toil. The book emphasizes: "SRE applies software engineering to operations work." (SRE Book - What Is SRE?).

Option C is the only answer fully aligned with the official definition.

Options A, B, and D do not correspond to the SRE definition provided by Google.

Thus, the correct missing phrase is software engineering.
