Authentic Guidewire InsuranceSuite-Analyst Dumps PDF - The Best Way To Pass Exam

With the help of the Guidewire InsuranceSuite-Analyst brain dumps and preparation material provided by TorrentVCE, you will be able to get Guidewire Certified Associate certified at the first attempt. Our Guidewire experts have curated an amazing InsuranceSuite-Analyst exam guide for passing the InsuranceSuite-Analyst Exam. You can get the desired outcome by preparing yourself from the InsuranceSuite-Analyst exam dumps material provided by TorrentVCE. We frequently update our InsuranceSuite-Analyst exam preparation material to reflect the latest changes in the InsuranceSuite-Analyst exam syllabus.

Guidewire InsuranceSuite-Analyst Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Understanding the underlying technology crucial to an analyst: This topic highlights the importance of having a foundational understanding of Guidewire's technology stack to support better analysis and communication with technical teams.
Topic 2	<ul style="list-style-type: none">Guidewire approach to implementation: This topic explains Guidewire's standard methodology and best practices for implementing InsuranceSuite solutions effectively in insurance projects.
Topic 3	<ul style="list-style-type: none">Guidewire project phases: This domain outlines the different phases of a Guidewire project lifecycle, including planning, design, development, testing, and deployment.
Topic 4	<ul style="list-style-type: none">Considering value in the Requirements Process: This section focuses on evaluating and prioritizing requirements based on business value to ensure maximum impact and efficiency in solution delivery.
Topic 5	<ul style="list-style-type: none">Documenting Requirements: This domain covers how analysts capture, structure, and clearly document business and functional requirements to ensure accurate implementation within InsuranceSuite.

Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q83-Q88):

NEW QUESTION # 83

Which team members are part of the Three Amigos meeting? (Select two)

- A. Project Manager
- **B. Business Analyst**
- C. Subject Matter Expert
- D. Scrum Master
- **E. Quality Analyst**

Answer: B,E

Explanation:

The Three Amigos meeting is a key Agile practice used in Guidewire projects to clarify user stories before development begins. It ensures shared understanding across execution roles and reduces defects caused by misinterpretation.

Two of the required participants in a Three Amigos session are the Business Analyst and the Quality Analyst, making Options A and B correct.

The Business Analyst represents business intent and functional requirements. They explain the user story, business rules, validations, and expected behavior.

The Quality Analyst represents the testing perspective. They focus on acceptance criteria, edge cases, and how the story will be validated to determine when it is "done." While Developers are typically the third "Amigo" in practice, they are not listed as an option in this question.

The Project Manager and Scrum Master facilitate delivery but do not play the execution-focused role of an Amigo. Subject Matter Experts provide input during elaboration but are not core participants in Three Amigos sessions.

NEW QUESTION # 84

Elaborate Requirements, Confirm Scope, Plan Project / Sprints, and Infrastructure Sizing are all part of this project phase?

- A. Inception
- B. Development
- C. Stabilization
- D. Pre-Inception

Answer: A

Explanation:

The correct answer is A. Inception because the activities listed in the question are core objectives of the Inception phase in a Guidewire InsuranceSuite implementation. This phase is where the project team moves from early preparation into structured planning and detailed alignment around what will be delivered and how the delivery will be organized.

Elaborate Requirements is a defining Inception activity because the team works with business stakeholders to refine high-level needs into clearer functional requirements and user stories. Confirm Scope also belongs in Inception, since the project must establish which business capabilities, product areas, integrations, and configurations are included before full execution begins. Plan Project / Sprints is part of setting up the delivery model, including release planning, iteration structure, staffing alignment, and prioritization.

Infrastructure Sizing is also performed during this stage so the technical team can estimate and prepare the environments needed to support development, testing, and later deployment.

The other options do not fit as well. Pre-Inception is more focused on early readiness, business case thinking, and preliminary setup before formal project initiation. Development is the phase where the configured solution is actually built, tested, and iterated upon after scope and planning are already established.

Stabilization occurs later and focuses on final validation, issue resolution, readiness assessment, and support for production go-live.

Because the question groups together requirement elaboration, scope confirmation, sprint planning, and infrastructure sizing, all of these are most accurately associated with the Inception phase, where the project creates the foundation for successful downstream delivery.

NEW QUESTION # 85

Gosu rules consist of:

- A. An Audit that executes if the condition is true, nothing happens if the condition is false
- B. A Condition that evaluates to true or false
- C. A business rule that evaluates true or false
- D. A business object or Root Object

Answer: A,B,D

Explanation:

Comprehensive and Detailed Explanation:

Gosu rules (specifically the business rules managed in Guidewire Studio) are structured logic components used to implement business policy. According to the technical documentation and analyst training, a single Gosu rule consists of three fundamental components:

* A Root Object (Option B): Every Rule Set is defined for a specific entity type, known as the "Root Object" (e.g., a Claim, a Policy, or an Exposure). This object provides the data context that the rule evaluates and modifies.

* A Condition (Option C): This is a boolean expression (written in Gosu) that the system evaluates. It must return True or False. If the condition evaluates to True, the rule triggers; if False, the system skips to the next rule.

* An Action (Option D): This is the executable logic that runs only if the Condition is true. It performs the necessary updates, assignments, or creations.

* Note on Option D: The text in the question "An Audit that executes..." is a known transcription error in many exam dumps. The correct Guidewire terminology is Action. However, the description provided ("executes if the condition is true...") perfectly describes the Action component, making it a correct part of the answer despite the typo.

Why Option A is incorrect:

* A. A business rule that evaluates true or false: This is a redundant or circular definition. The Condition evaluates to true or false, not

the rule itself. The "Rule" is the container for the Root, Condition, and Action.

NEW QUESTION # 86

A Guidewire Cloud project needs to implement functionality that tracks certification status held by contractors performing work on a claim. The status will be selected from a predefined list, and the user will also need to capture free-text notes about the certification. Applying your understanding of the Guidewire Data Model, which two changes to the base data model structure are MOST likely needed to support these requirements?

- A. Create a Typelist to define the specific certification types
- B. Add two new labels (for example, text or typekey)
- C. Add new fields (for example, text or typekey)
- D. Add a new entity specifically for Contractor Certifications
- E. Update the relevant PCF file for the screen
- F. Create a .TTX file for the specific certification types

Answer: A,C

Explanation:

When extending the Guidewire data model, analysts must distinguish between data structure changes and UI or presentation changes. In this scenario, the business requirement is to store a certification status selected from a predefined list and free-text notes related to that certification.

The correct data model changes are to create a Typelist and add new fields, making Options D and E correct.

A Typelist (Option D) is the standard Guidewire mechanism for representing a predefined set of selectable values, such as certification statuses (for example, Certified, Expired, Pending). Typelists ensure data consistency, support localization, and integrate cleanly with rules, validations, and UI components.

In addition, new fields must be added to the data model (Option E). One field would typically be a typekey referencing the typelist for certification status, and another would be a text field to store the free-text certification notes. These fields would be added to an appropriate existing entity (such as a contractor-related or claim-related entity), depending on the design.

The other options are not data model changes. Updating PCF files (Option A) affects the UI, not how data is stored. Creating a new entity (Option B) is unnecessary unless there is a complex, repeatable certification structure. A .txt file (Option C) is not used for typelist definition. Labels (Option F) control display text, not data storage.

NEW QUESTION # 87

In InsuranceSuite, Page Configuration Format (PCF) files control the user interface. Which of the following are examples of common widgets used in PCF files? (Choose two)

- A. DetailView
- B. MenuView
- C. Card
- D. NameValueView
- E. TextView

Answer: A,D

Explanation:

Why this is correct

* NameValueView is a very common PCF widget used to display label-value pairs (for example, policy or claim attributes).

* DetailView is another core PCF widget used to display detailed information for an entity in a structured layout.

Why the others are not selected

* MenuView does not exist in PCF, but when restricted to two choices, NameValueView and DetailView are the most fundamental and commonly referenced widgets in Guidewire training.

* Card is not a Guidewire PCF widget.

* TextView is not used as a standard standalone PCF widget in InsuranceSuite UI architecture.

NEW QUESTION # 88

.....

Do you want to pass InsuranceSuite-Analyst exam in a short time? InsuranceSuite-Analyst dumps and answers from our TorrentVCE site are all created by the IT talents with more than 10-year experience in IT certification. The TorrentVCE site offers the most comprehensive certification standards and InsuranceSuite-Analyst Study Guide. According to our end users of InsuranceSuite-Analyst dumps, it indicates that the passing rate of InsuranceSuite-Analyst exam is as high as 100%. If you have any questions about InsuranceSuite-Analyst exam dump, we will answer you in first time.
