

# 100% 유효한 Professional-Cloud-Architect 높은 통과율인 기덤프 자료시험

BONUS!!! KoreaDumps Professional-Cloud-Architect 시험 문제집 전체 버전을 무료로 다운로드하세요:  
[https://drive.google.com/open?id=122G9Bf-PjTv9CIPPeaNVtt20E\\_z7S11a](https://drive.google.com/open?id=122G9Bf-PjTv9CIPPeaNVtt20E_z7S11a)

경쟁율이 점점 높아지는 IT업계에 살아남으려면 국제적으로 인증해주는 IT자격증 몇개쯤은 취득해야 되지 않을까요? Google Professional-Cloud-Architect 시험으로부터 자격증 취득을 시작해보세요. Google Professional-Cloud-Architect 덤프의 모든 문제를 외우기만 하면 시험패스가 됩니다. Google Professional-Cloud-Architect 덤프는 실제 시험문제의 모든 유형을 포함되어있어 적중율이 최고입니다.

인증 시험은 GCP에 대한 후보자의 지식과 이해를 평가하는 객관식 질문으로 구성됩니다. 시험은 다른 섹션으로 나뉘며 각 섹션은 GCP의 특정 영역에 중점을 둡니다. 이 시험에는 GCP 인프라, 네트워킹, 보안, 데이터 저장, 데이터 처리 및 응용 프로그램 개발과 같은 주제가 다릅니다. 시험에 합격하려면 후보자는 시험에서 70% 이상을 기록해야 합니다.

Google Professional-Cloud-Architect 인증을 받으면 개인이 업계 표준 및 모범 사례를 충족하는 클라우드 솔루션을 설계하고 구현할 수 있는 전문 지식이 있음을 보여줍니다. 또한 GCP 기술 및 서비스를 사용하여 비즈니스 목표를 달성하는 확장 가능하고 안전하며 고도로 사용 가능한 클라우드 솔루션을 제공하는 능력을 강조합니다. 이 인증은 GCP를 사용하는 조직의 가치가 높으며 클라우드 컴퓨팅 산업에서 경력을 발전시키려는 클라우드 아키텍트의 주요 차별화 요소입니다.

## Professional-Cloud-Architect 높은 통과율 인기 덤프자료 최신 덤프 무료 샘플

KoreaDumps의 Google 인증 Professional-Cloud-Architect 덤프의 무료 샘플을 이미 체험해보셨죠? KoreaDumps의 Google 인증 Professional-Cloud-Architect 덤프에 단번에 신뢰가 생겨 남은 문제도 공부해보고 싶지 않나요? KoreaDumps는 고객님들의 시험부담을 덜어드리기 위해 가벼운 가격으로 덤프를 제공해드립니다. KoreaDumps의 Google 인증 Professional-Cloud-Architect로 시험패스하다 더욱 넓고 좋은 곳으로 고고싱하세요.

## 최신 Google Cloud Certified Professional-Cloud-Architect 무료 샘플문제 (Q239-Q244):

### 질문 # 239

You are responsible for the Google Cloud environment in your company. Multiple departments need access to their own projects and the members within each department will have the same project responsibilities. You want to structure your Google Cloud environment for minimal maintenance and maximum overview of IAM permissions as each department's projects start and end. You want to follow Google-recommended practices. What should you do?

- A. Create a Google Group per department and add all department members to their respective groups. Create a folder per

department and grant the respective group the required IAM permissions at the folder level Add the projects under the respective folders

- B. Create a Google Group per department and add all department members to their respective groups Grant each group the required IAM permissions for their respective projects
- C. Create a folder per department and grant the respective members of the department the required IAM permissions at the folder level. Structure all projects for each department under the respective folders
- D. Grant all department members the required IAM permissions for their respective projects

**정답: B**

**설명:**

This option follows the Google-recommended practices for structuring a Google Cloud environment for minimal maintenance and maximum overview of IAM permissions. By creating a Google Group per department and adding all department members to their respective groups, you can simplify user management and avoid granting IAM permissions to individual users. By creating a folder per department and granting the respective group the required IAM permissions at the folder level, you can enforce consistent policies across all projects within each department and avoid granting IAM permissions at the project level. By adding the projects under the respective folders, you can organize your resources hierarchically and leverage inheritance of IAM policies from folders to projects. The other options are not optimal for this scenario, because they either require granting IAM permissions to individual users (B, C), or do not use Google Groups to manage users (D). References:

<https://cloud.google.com/architecture/identity/best-practices-for-planning>

<https://cloud.google.com/resource-manager/docs/creating-managing-folders>

**질문 # 240**

For this question, refer to the Dress4Win case study.

Dress4Win has end-to-end tests covering 100% of their endpoints. They want to ensure that the move to the cloud does not introduce any new bugs. Which additional testing methods should the developers employ to prevent an outage?

- A. They should add additional unit tests and production scale load tests on their cloud staging environment.
- B. They should enable Google Stackdriver Debugger on the application code to show errors in the code.
- C. They should run the end-to-end tests in the cloud staging environment to determine if the code is working as intended.
- D. They should add canary tests so developers can measure how much of an impact the new release causes to latency.

**정답: A**

**설명:**

Topic 5, Dress4Win Case 2

Company Overview

Dress4win is a web-based company that helps their users organize and manage their personal wardrobe using a website and mobile application. The company also cultivates an active social network that connects their users with designers and retailers. They monetize their services through advertising, e-commerce, referrals, and a freemium app model. The application has grown from a few servers in the founder's garage to several hundred servers and appliances in a collocated data center. However, the capacity of their infrastructure is now insufficient for the application's rapid growth. Because of this growth and the company's desire to innovate faster, Dress4Win is committing to a full migration to a public cloud.

Solution Concept

For the first phase of their migration to the cloud, Dress4win is moving their development and test environments. They are also building a disaster recovery site, because their current infrastructure is at a single location. They are not sure which components of their architecture they can migrate as is and which components they need to change before migrating them.

Existing Technical Environment

The Dress4win application is served out of a single data center location. All servers run Ubuntu LTS v16.04.

Databases:

MySQL. 1 server for user data, inventory, static data:

- MySQL 5.8
- 8 core CPUs
- 128 GB of RAM
- 2x 5 TB HDD (RAID 1)

Redis 3 server cluster for metadata, social graph, caching. Each server is:

- Redis 3.2
- 4 core CPUs
- 32GB of RAM

#### Compute:

40 Web Application servers providing micro-services based APIs and static content.

- Tomcat - Java
- Nginx
- 4 core CPUs
- 32 GB of RAM

#### 20 Apache Hadoop/Spark servers:

- Data analysis
- Real-time trending calculations
- 8 core CPUS
- 128 GB of RAM
- 4x 5 TB HDD (RAID 1)

#### 3 RabbitMQ servers for messaging, social notifications, and events:

- 8 core CPUs
- 32GB of RAM

#### Miscellaneous servers:

- Jenkins, monitoring, bastion hosts, security scanners
- 8 core CPUs
- 32GB of RAM

#### Storage appliances:

iSCSI for VM hosts

Fiber channel SAN - MySQL databases

- 1 PB total storage; 400 TB available

NAS - image storage, logs, backups

- 100 TB total storage; 35 TB available

#### Business Requirements

Build a reliable and reproducible environment with scaled parity of production.

Improve security by defining and adhering to a set of security and Identity and Access Management (IAM) best practices for cloud.

Improve business agility and speed of innovation through rapid provisioning of new resources.

Analyze and optimize architecture for performance in the cloud.

#### Technical Requirements

Easily create non-production environment in the cloud.

Implement an automation framework for provisioning resources in cloud.

Implement a continuous deployment process for deploying applications to the on-premises datacenter or cloud.

Support failover of the production environment to cloud during an emergency.

Encrypt data on the wire and at rest.

Support multiple private connections between the production data center and cloud environment.

#### Executive Statement

Our investors are concerned about our ability to scale and contain costs with our current infrastructure. They are also concerned that a competitor could use a public cloud platform to offset their up-front investment and free them to focus on developing better features. Our traffic patterns are highest in the mornings and weekend evenings; during other times, 80% of our capacity is sitting idle.

Our capital expenditure is now exceeding our quarterly projections. Migrating to the cloud will likely cause an initial increase in spending, but we expect to fully transition before our next hardware refresh cycle. Our total cost of ownership (TCO) analysis over the next 5 years for a public cloud strategy achieves a cost reduction between 30% and 50% over our current model.

#### 질문 # 241

Your development team has created a mobile game app. You want to test the new mobile app on Android and iOS devices with a variety of configurations. You need to ensure that testing is efficient and cost-effective. What should you do?

- A. Upload your mobile app to the Firebase Test Lab, and test the mobile app on Android and iOS devices.
- B. Upload your mobile app with different configurations to Firebase Hosting and test each configuration.
- C. Create Android and iOS containers on Google Kubernetes Engine (GKE), install the mobile app on the containers, and test the mobile app.
- D. Create Android and iOS VMs on Google Cloud, install the mobile app on the VMs, and test the mobile app.

정답: C

### 질문 # 242

Your company has successfully migrated to the cloud and wants to analyze their data stream to optimize operations. They do not have any existing code for this analysis, so they are exploring all their options. These options include a mix of batch and stream processing, as they are running some hourly jobs and live- processing some data as it comes in.

Which technology should they use for this?

- A. Google Compute Engine with Google BigQuery
- B. Google Cloud Dataproc
- C. Google Container Engine with Bigtable
- D. Google Cloud Dataflow

정답: D

#### 설명:

Cloud Dataflow is a fully-managed service for transforming and enriching data in stream (real time) and batch (historical) modes with equal reliability and expressiveness -- no more complex workarounds or compromises needed.

Reference: <https://cloud.google.com/dataflow/>

### 질문 # 243

For this question, refer to the Mountkirk Games case study. You are in charge of the new Game Backend Platform architecture. The game communicates with the backend over a REST API.

You want to follow Google-recommended practices. How should you design the backend?

- A. Create an instance template for the backend. For every region, deploy it on a single-zone managed instance group. Use an L7 load balancer.
- B. Create an instance template for the backend. For every region, deploy it on a multi-zone managed instance group. Use an L7 load balancer.
- C. Create an instance template for the backend. For every region, deploy it on a single-zone managed instance group. Use an L4 load balancer.
- D. Create an instance template for the backend. For every region, deploy it on a multi-zone managed instance group. Use an L4 load balancer.

정답: D

#### 설명:

Explanation/Reference:

Testlet 1

#### Company Overview

TerramEarth manufactures heavy equipment for the mining and agricultural industries: about 80% of their business is from mining and 20% from agriculture. They currently have over 500 dealers and service centers in 100 countries. Their mission is to build products that make their customers more productive.

#### Company background

TerramEarth was formed in 1946, when several small, family owned companies combined to retool after World War II. The company cares about their employees and customers and considers them to be extended members of their family.

TerramEarth is proud of their ability to innovate on their core products and find new markets as their customers' needs change. For the past 20 years, trends in the industry have been largely toward increasing productivity by using larger vehicles with a human operator.

#### Solution Concept

There are 20 million TerramEarth vehicles in operation that collect 120 fields of data per second. Data is stored locally on the vehicle and can be accessed for analysis when a vehicle is serviced. The data is downloaded via a maintenance port. This same port can be used to adjust operational parameters, allowing the vehicles to be upgraded in the field with new computing modules.

Approximately 200,000 vehicles are connected to a cellular network, allowing TerramEarth to collect data directly. At a rate of 120 fields of data per second with 22 hours of operation per day, TerramEarth collects a total of about 9 TB/day from these connected vehicles.

#### Existing Technical Environment

TerramEarth's existing architecture is composed of Linux-based systems that reside in a data center. These systems gzip CSV files from the field and upload via FTP, transform and aggregate them, and place the data in their data warehouse. Because this process takes time, aggregated reports are based on data

that is 3 weeks old.

With this data, TerramEarth has been able to preemptively stock replacement parts and reduce unplanned downtime of their vehicles by 60%. However, because the data is stale, some customers are without their vehicles for up to 4 weeks while they wait for replacement parts.

#### Business Requirements

Decrease unplanned vehicle downtime to less than 1 week, without increasing the cost of carrying surplus inventory

Support the dealer network with more data on how their customers use their equipment to better position new products and services

Have the ability to partner with different companies - especially with seed and fertilizer suppliers in the fast-growing agricultural business - to create compelling joint offerings for their customers.

#### CEO Statement

We have been successful in capitalizing on the trend toward larger vehicles to increase the productivity of our customers. Technological change is occurring rapidly, and TerramEarth has taken advantage of connected devices technology to provide our customers with better services, such as our intelligent farming equipment. With this technology, we have been able to increase farmers' yields by 25%, by using past trends to adjust how our vehicles operate. These advances have led to the rapid growth of our agricultural product line, which we expect will generate 50% of our revenues by 2020.

#### CTO Statement

Our competitive advantage has always been in the manufacturing process, with our ability to build better vehicles for lower cost than our competitors. However, new products with different approaches are constantly being developed, and I'm concerned that we lack the skills to undergo the next wave of transformations in our industry. Unfortunately, our CEO doesn't take technology obsolescence seriously and he considers the many new companies in our industry to be niche players. My goals are to build our skills while addressing immediate market needs through incremental innovations.

## 질문 # 244

.....

Google인증Professional-Cloud-Architect시험은 현재 치열한 IT경쟁 속에서 열기는 더욱더 뜨겁습니다. 응시자들도 더욱더 많습니다. 하지만 난이도난 전혀 낮아지지 않고 이지도 어려운 시험입니다. 어쨌든 개인적인 지식 장악도나 정보기술 등을 테스트하는 시험입니다. 보통은 Google인증Professional-Cloud-Architect시험을 넘기 위해서는 많은 시간과 신경이 필요합니다.
