

2026 Salesforce Salesforce-MuleSoft-Developer-I: The Best Reliable Salesforce Certified MuleSoft Developer (Mule-Dev-201) Test Questions

What's more, part of that PassReview Salesforce-MuleSoft-Developer-I dumps now are free: https://drive.google.com/open?id=1XsUbCL_qM6KRthmMWsyAjErD-hALhnCm

Success in acquiring the Salesforce-MuleSoft-Developer-I is seen to be crucial for your career growth. But preparing for the Salesforce Certified MuleSoft Developer (Mule-Dev-201) (Salesforce-MuleSoft-Developer-I) exam in today's busy routine might be difficult. This is where actual Salesforce Salesforce-MuleSoft-Developer-I Exam Questions offered by PassReview come into play. For those candidates, who want to clear the Salesforce-MuleSoft-Developer-I certification exam in a short time, we offer updated and real exam questions.

Salesforce Salesforce-MuleSoft-Developer-I Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Handling Errors: Handling errors includes describing default error handling in Mule applications and defining custom global default error handlers. It involves comparing On Error Continue and On Error Propagate scopes, creating error handlers for a flow, using the Try scope, and mapping errors to custom application errors.

Topic 2	<ul style="list-style-type: none"> • Deploying and Managing APIs and Integrations: It includes packaging Mule applications for deployment and deploying them to CloudHub. This topic also involves using CloudHub properties, creating and deploying API proxies, connecting an API implementation to API Manager, and applying policies to secure an API.
Topic 3	<ul style="list-style-type: none"> • Designing APIs: Designing APIs involves describing the lifecycle of the modern API and using RAML to define various aspects of an API. It includes identifying when to use query parameters vs URI parameters, and defining API parameters.
Topic 4	<ul style="list-style-type: none"> • Structuring Mule Applications: Structuring Mule applications covers parameterizing an application and defining and reusing global configurations. It includes breaking an application into multiple flows using private flows, subflows, and the Flow Reference component.
Topic 5	<ul style="list-style-type: none"> • Using Connectors: It focuses on retrieving data from REST services using HTTP Request or REST Connector. Moreover, the topic covers using a Web Service Consumer connector for SOAP web services and the Transform Message component.
Topic 6	<ul style="list-style-type: none"> • Creating Application Networks: The topic of creating Application Networks encompasses understanding MuleSoft's proposal for closing the IT delivery gap and describing the role and characteristics of the modern API. It also includes the purpose and roles of a Center for Enablement (C4E), and the benefits of API-led.
Topic 7	<ul style="list-style-type: none"> • Building API Implementation Interfaces: This topic involves manually creating a RESTful interface for a Mule application and generating a REST Connector from a RAML specification. It also includes describing the features and benefits of APIkit.

Latest Salesforce-MuleSoft-Developer-I Test Objectives & Salesforce-MuleSoft-Developer-I Latest Test Practice

Our Salesforce-MuleSoft-Developer-I Exam Dumps with the highest quality which consists of all of the key points required for the Salesforce-MuleSoft-Developer-I exam can really be considered as the royal road to learning. PassReview has already become a famous brand all over the world in this field since we have engaged in compiling the Salesforce-MuleSoft-Developer-I practice materials for more than ten years and have got a fruitful outcome. You are welcome to download the free demos to have a general idea about our Salesforce-MuleSoft-Developer-I training materials.

Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q12-Q17):

NEW QUESTION # 12

According to Mulesoft, how are Modern APIs treated as?

- A. SOAP API's
- **B. Products**
- C. Rest API's
- D. Code

Answer: B

Explanation:

Correct answer is Products

Modern API has three features 1) Treated as products for easy consumption 2) Discoverable and accessible through self-service 3) Easily managed for security, scalability and performance

NEW QUESTION # 13

Refer to the exhibits. The webClient flow sends requests to the mockServer Row's HTTP Listener. An HTTP: METHOD_NOT_ALLOWED error is thrown each time the webClient flow executes. What attribute value must be changed in the webClient flow's HTTP Request operation to prevent this error from being thrown?

- A. Change the method attribute's value to "*"
- B. Change the protocol attribute's value to "HTTPS"
- C. Change the method attribute's value to "POST"
- D. Change the path attribute's value to "/api/partners/fastShopping"

Answer: C

NEW QUESTION # 14

A mule project contains MySQL database dependency . The project is exported from Anypoint Studio so that it can be deployed to Cloudhub. What export options needs to be selected to create the smallest deployable archive that will successfully deploy to Cloudhub?

- A. Select only below option 2) Include project module and dependencies
- B. Select only below option 1) Attach project sources
- C. No need to select any of the below options 1) Attach project sources 2) Include project module and dependencies
- D. Select both the options 1) Attach project sources 2) Include project module and dependencies

Answer: A

Explanation:

You can choose Attach Project Sources to include metadata that Studio requires to reimport the deployable file as an open Mule project into your workspace. You must keep the Attach Project Sources option selected to be able to import the packaged JAR file back into a Studio workspace. But requirement here is to create smallest deployable archive that will successfully deploy to Cloudhub. Hence we can ignore this option.

We need to select Include project module and dependencies

As actual modules and external dependencies required to run the Mule application in a Mule runtime engine Hence correct answer is Select only below option 2) Include project module and dependencies MuleSoft Doc Ref:

<https://docs.mulesoft.com/studio/7.5/import-export-packages#exporting-a-studio-project-to-a-deployable-mule-application>

NEW QUESTION # 15

Refer to the exhibits.

```
##%RAML 1.0
title: ACME Order API
version: 1.0
```

```
/order:
  post:
    body:
      application/xml:
        example: |
          <order oid="1001">
            <customerName>Annie Point
            </customerName>
            <itemName>Electric Standing Desk
            </itemName>
            <cost>300.00</cost>
          </order>
```

The web client sends a POST request to the ACME Order API with an XML payload. An error is returned. What should be changed in the request so that a success response code is returned to the web client?

- A. Set a request header with the name Content-Type to a value of application/xml
- B. Set a response header with the name Content-Type to a value of application/xml
- C. Set a response header with the name Content-Type to a value of application/octet-stream
- D. Set a request header with the name Content-Type to a value of application/octet-stream

Answer: A

Explanation:

The HTTP 415 Unsupported Media Type client error response code indicates that the server refuses to accept the request because the payload format is in an unsupported format. The format problem might be due to the request's indicated Content-Type or Content-Encoding, or as a result of inspecting the data directly. As per RAML input is expected in application/xml. Hence correct answer is Set a request header with the name Content-Type to a

NEW QUESTION # 16

Refer to the exhibits.

All three of the conditions for the Choice router are true. What messages are written in the application log?

- A. Route2
- B. Route1,Route2
- C. Route1
- D. Route1,Route2,Default

Answer: C

Explanation:

Only one of the routes in the Choice router executes, meaning that the first expression that evaluates to true triggers that route's execution and the others are not checked. If none of the expressions are true, then the default route executes. Hence only Route1 will be executed as it is the first expression. Hence output of logger is Route1.

MuleSoft Doc Ref : <https://docs.mulesoft.com/mule-runtime/4.3/choice-router-concept> The Choice router dynamically routes messages through a flow according to a set of DataWeave expressions that evaluate message content. Each expression is associated with a different routing option. The effect is to add conditional processing to a flow, similar to an if/then/else code block in most programming languages.

Only one of the routes in the Choice router executes, meaning that the first expression that evaluates to true triggers that route's execution and the others are not checked. If none of the expressions are true, then the default route executes.
