Hot Valid SC-401 Exam Bootcamp | Professional Microsoft SC-401: Administering Information Security in Microsoft 365 100% Pass

Dumpkiller SC-401 Questions have helped thousands of candidates to achieve their professional dreams. Our Administering Information Security in Microsoft 365 (SC-401) exam dumps are useful for preparation and a complete source of knowledge. If you are a full-time job holder and facing problems finding time to prepare for the Administering Information Security in Microsoft 365 (SC-401) exam questions, you shouldn't worry more about it.

Microsoft SC-401 Exam Syllabus Topics:

Topic	Details
Topic 1	• Implement Data Loss Prevention and Retention: This section evaluates Data Protection Officers on designing and managing data loss prevention (DLP) policies and retention strategies. It includes setting policies for data security, configuring Endpoint DLP, and managing retention labels and policies. Candidates must understand adaptive scopes, policy precedence, and data recovery within Microsoft 365.
Topic 2	• Implement Information Protection: This section measures the skills of Information Security Analysts in classifying and protecting data. It covers identifying and managing sensitive information, creating and applying sensitivity labels, and implementing protection for Windows, file shares, and Exchange. Candidates must also configure document fingerprinting, trainable classifiers, and encryption strategies using Microsoft Purview.
Topic 3	• Protect Data Used by AI Services: This section evaluates AI Governance Specialists on securing data in AI-driven environments. It includes implementing controls for Microsoft Purview, configuring Data Security Posture Management (DSPM) for AI, and monitoring AI-related security risks to ensure compliance and protection.

Topic 4	• Manage Risks, Alerts, and Activities: This section assesses Security Operations Analysts on insider risk management, monitoring alerts, and investigating security activities. It covers configuring risk policies, handling forensic evidence, and responding to alerts using Microsoft Purview and Defender tools. Candidates must also analyze audit logs and manage security workflows.

SC-401 Certification Torrent, SC-401 Exam Sims

Our SC-401 training materials provide 3 versions to the client and they include the PDF version, PC version, APP online version. Each version's using method and functions are different but the questions and answers of our SC-401 study quiz is the same. The client can decide which SC-401 version to choose according their hobbies and their practical conditions. You will be surprised by the convenient functions of our SC-401 exam dumps.

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q130-Q135):

NEW QUESTION # 130
You create a data loss prevention (DIP) policy that meets the following requirements:
* Prevents guest users from accessing a sensitive document shared during a Microsoft Teams chat
* Prevents guest users from accessing a sensitive document stored in a Microsoft Team? channel Which location should you select for each requirement? To answer, select the appropriate options in the answer area NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

In Microsoft Teams:

Files shared in 1:1 or group chats

These files are stored in the sender's OneDrive for Business.

So, to protect them with DLP and prevent guest access, the relevant location is OneDrive accounts.

Files shared in Teams channels

These files are stored in the underlying SharePoint Online site associated with that Team.

So, to protect them with DLP and prevent guest access, the relevant location is SharePoint sites.

Incorrect options:

Exchange email: Protects email messages, not Teams-shared files.

Teams chat and channel messages: Protects text messages, not the attached or shared files.

Reference:

Microsoft Learn: Learn about DLP in Microsoft Teams

Quote: "When a user shares a file in a Teams channel, the file is stored in SharePoint. When a user shares a file in a Teams chat, the file is stored in OneDrive."

NEW QUESTION # 131

You have a Microsoft 365 E5 tenant.

You need to add a new keyword dictionary.

What should you create?

- A. a sensitivity label
- B. a trainable classifier
- C. a sensitive info type
- D. a retention policy

Answer: C

Explanation:

To add a new keyword dictionary in Microsoft Purview Data Loss Prevention (DLP), you must create a Sensitive Information Type (SIT).

Sensitive Info Types (SITs) allow you to define custom detection rules, including keyword dictionaries, regular expressions, and functions for identifying sensitive content in emails, documents, and other Microsoft 365 locations. A keyword dictionary is a list of predefined words/phrases that Microsoft Purview can use to identify and classify content for DLP policies.

Steps to add a keyword dictionary:

1. Go to Microsoft Purview compliance portal
2. Navigate to Data classification > Sensitive info types
3. Create a new sensitive info type
4. Add a keyword dictionary
5. Save and use it in a DLP policy

NEW QUESTION # 132

You have a Microsoft 565 E5 subscription.

You plan to use Microsoft Purview insider risk management.

You need to create an insider risk management policy that will detect data theft from Microsoft SharePoint Online by users that submitted their resignation or are near their employment termination date.

What should you do first?

- A. Configure a Physical badging connector.
- B. Onboard devices to Microsoft Defender for Endpoint.
- C. Configure a HR data connector.
- D. Configure Office indicators.

Answer: C

NEW QUESTION # 133
HOTSPOT
You have a Microsoft 365 E5 subscription. The subscription contains devices that are onboarded to Microsoft Purview and configured as shown in the following table.

Name	Operating system	Microsoft Purview browser extension
Device1	Windows 11	Installed
Device2	Windows 11	Not installed
Deivce3	macOS	Installed

The subscription contains the users shown in the following table.

Name	Activity performed during the last seven days	On device
User1	Used a generative AI website to generate an image	Device1
User2	Asked Microsoft 365 Copilot to summarize a document	Device2
User3	Browsed sample fontent on a generative AI website	Device3

You need to review the activities.
What should you use for each user? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Answer Area

User1:
Activity explorer in Data Security Posture Management for AI (DSPM for AI)
Audit log search
Insider risk audit log
Unified Catalog

User2:
Activity explorer in Data Security Posture Management for AI (DSPM for AI)
Audit log search
Insider risk audit log
Unified Catalog

User3:
Activity explorer in Data Security Posture Management for AI (DSPM for AI)
Audit log search
Insider risk audit log
Unified Catalog

User1: Since the Microsoft Purview browser extension is installed on Device1, AI-related activity performed by User1 (generating an image using a generative AI website) can be reviewed in Activity explorer in DSPM for AI.

User2: Since Device2 does not have the Microsoft Purview browser extension installed, AI-related activity cannot be tracked in DSPM for AI. Instead, Audit log search should be used to review activity such as using Microsoft 365 Copilot.

User3: Since Device3 has the Microsoft Purview browser extension installed, AI-related activity (browsing sample content on a generative AI website) can be reviewed using Activity explorer in DSPM for AI.

NEW QUESTION # 134

You have a Microsoft 365 E5 subscription.

You need to identify documents that contain patent application numbers containing the letters PA followed by eight digits, for example, PA 12345678. The solution must minimize administrative effort.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

To identify the documents, use a data classification of:
Exact data match (EDM)
Sensitive info type
Trainable classifier

Configure data classifications by using a:
Keyword dictionary
Regular expression
Function

Answer:

Explanation:

Answer Area

To identify the documents, use a data classification of: [dropdown]

- Exact data match (EDM)
- Sensitive info type
- Trainable classifier
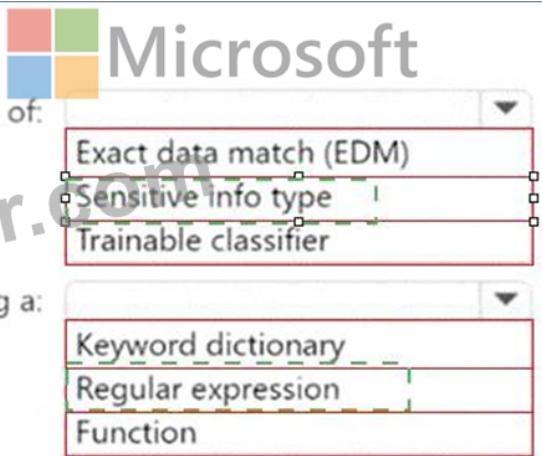

Configure data classifications by using a: [dropdown]

- Keyword dictionary
- Regular expression
- Function

Explanation:

Answer Area

To identify the documents, use a data classification of: [dropdown]

- Exact data match (EDM)
- **Sensitive info type**
- Trainable classifier

Configure data classifications by using a: [dropdown]

- Keyword dictionary
- **Regular expression**
- Function

Box 1: Since you are looking for a specific pattern (PA followed by eight digits, e.g., PA 12345678), the best classification method is Sensitive Info Type. Sensitive Info Types allow pattern-based matching to identify structured data. Exact Data Match (EDM) is not needed because you're not comparing against a fixed dataset.

Trainable classifier is not appropriate because this is a structured pattern, not an unstructured document classification.

Box 2: Since PA 12345678 follows a structured pattern, the most effective method is Regular Expression (Regex). A Regular Expression (Regex) can be written to match "PA" followed by exactly eight digits (e.g., PA\s\d{8}). Keyword dictionary is not ideal because it works for predefined words, not number patterns.

Function is unnecessary because there is no need for checksum validation or predefined validation rules.

NEW QUESTION # 135

......

With our motto "Sincerity and Quality", we will try our best to provide the big-league SC-401 exam questions for our valued customers like you. Our company emphasizes the interaction with customers on our SC-401 Study Guide. We not only attach great importance to the quality of Administering Information Security in Microsoft 365 exam, but also take the construction of a better after-sale service on our SC-401 learning materials into account.
