

Pass Guaranteed Quiz Juniper - JN0-106 - Junos, Associate (JNCIA-Junos) Useful Test Answers

DOWNLOAD the newest ExamCost JN0-106 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1TQFvJuoyz4J5y_KBcrX2_p_u5rYysa73

You can save time and clear the JN0-106 certification test in one sitting if you skip unnecessary material and focus on our Juniper JN0-106 actual questions. It's time to expand your knowledge and skills if you're committed to pass the Juniper JN0-106 Exam and get the certification badge to advance your profession.

Juniper JN0-106 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Networking Fundamentals: Covers core networking concepts including IP addressing, subnetting, Layer 2• 3 operations, routing basics, and protocol types essential for understanding how networks function.
Topic 2	<ul style="list-style-type: none">• User Interfaces: Covers how to navigate and use the Junos CLI and J-Web interface, including configuration management, output filtering, and working with active versus candidate configurations.
Topic 3	<ul style="list-style-type: none">• Routing Policy and Firewall Filters: Covers how to control traffic flow on Junos devices using routing policies and firewall filters, including policy structure, match criteria, filter actions, and unicast RPF.
Topic 4	<ul style="list-style-type: none">• Operational Monitoring and Maintenance: Covers the tools and procedures used to monitor, maintain, and troubleshoot Junos devices, including show• monitor commands, network utilities, OS upgrades, and password recovery.

Unparalleled Test JN0-106 Answers - 100% Pass JN0-106 Exam

ExamCost is unlike other exam materials that are available on the market, JN0-106 study torrent specially proposed different versions to allow you to learn not only on paper, but also to use mobile phones to learn. You can choose the version of JN0-106 training guide according to your interests and habits. And if you buy the value pack, you have all of the three versions, the price is quite preferential and you can enjoy all of the study experiences. This means you can study JN0-106 Exam Engine anytime and anyplace for the convenience these three versions bring.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q118-Q123):

NEW QUESTION # 118

How are the Routing Engine and the Packet Forwarding Engine components connected?

- A. They use shared memory access.
- **B. They use an internal Ethernet link.**
- C. They use an MPLS connection.
- D. They use external breakout cables.

Answer: B

Explanation:

The fundamental architecture of Junos OS is built upon the clean separation of the Control Plane (Routing Engine or RE) and the Forwarding Plane (Packet Forwarding Engine or PFE). While these two components perform vastly different tasks, they must maintain a high-speed, reliable communication channel to synchronize the state of the device. This connection is achieved through an internal Ethernet link .

This internal link serves several critical functions. First, it allows the Routing Engine to "push" the distilled forwarding table (FIB) to the PFE, ensuring that the hardware knows exactly how to handle incoming transit traffic at wire speed. Second, it acts as a conduit for exception traffic . If the PFE receives a packet that it cannot handle alone-such as an OSPF hello, a BGP update, or an ICMP "Time Exceeded" message-it sends that packet over the internal Ethernet link to the RE for processing. This link is carefully policed by built-in rate limiters to ensure that a flood of transit-related exception traffic cannot overwhelm the Routing Engine 's CPU, a mechanism known as control plane protection. By using a standard Ethernet-based internal fabric, Junos ensures a scalable and modular design where the RE can focus on complex protocol calculations while the PFE focuses on the heavy lifting of packet switching.

Reference: Junos OS Fundamentals, Control and Forwarding Plane Separation.

NEW QUESTION # 119

Which two statements are correct about SNMPv3? (Choose two.)

- **A. It protects against tampering and eavesdropping.**
- B. It is simpler to configure than SNMPv2c.
- **C. It provides encrypted passwords for secure communication.**
- D. It uses plain-text community strings.

Answer: A,C

Explanation:

SNMPv3 includes security features such as authentication and encryption, protecting against tampering and eavesdropping. It also supports encrypted credentials for secure communication between devices and management systems.

NEW QUESTION # 120

Which two statements about route preference in Junos are correct? (Choose two.)

- A. Both OSPF internal and OSPF AS external routes have the same preference.
- **B. Both EBGp and IBGP routes have the same preference.**
- C. Both direct and static routes have the same preference.
- **D. Both direct and local routes have the same preference.**

Answer: B,D

Explanation:

Route preference is the quantitative value Junos OS uses to rank the trustworthiness of different routing sources when multiple

protocols provide a path to the same destination. A critical architectural distinction in Junos is that both direct and local routes share the same default preference value of 0. Direct routes represent subnets physically connected to an interface, while local routes represent the specific IP address assigned to the device interface itself. Because a value of 0 is the lowest possible numerical value, these routes are always preferred over any learned via dynamic protocols or static configuration.

Additionally, Junos OS treats External BGP (EBGP) and Internal BGP (IBGP) differently than other vendors by assigning both an identical default preference of 170. This means that if the same prefix is learned via both EBGP and IBGP, the preference value alone will not determine the active route; the system must instead proceed to the standard BGP path selection algorithm (evaluating attributes like Local Preference, AS Path, and Origin) to break the tie. In contrast, OSPF distinguishes between its route types, assigning a preference of

10 to internal routes and 150 to AS external routes. Understanding these default values—specifically the parity between direct/local and the unified preference for BGP variants—is foundational for predicting how the Routing Engine populates the forwarding table. Reference: Routing Fundamentals, Default Route Preference Values.

NEW QUESTION # 121

Click the Exhibit button.

```
[edit firewall]
user@router# show
family inet {
  filter mgmt_fill {
    term t1 {
      from {
        destination-port ssh;
      }
      then count c1;
    }
    term t2 {
      then accept;
    }
  }
}
[edit interfaces]
user@router# show
me0 {
  unit 0 {
    family inet {
      filter {
        output mgmt_fill;
      }
      address 192.168.1.1/24;
    }
  }
}
```

Which two statements are true about the firewall filter configuration shown in the exhibit? (Choose two.)

- A. It applies the filter to a physical interface.
- B. It evaluates SSH packets egressing from the management interface.
- C. It counts the number of SSH packets that egress from the source SSH interface.
- D. It sends filtered data to a syslog file.

Answer: B,C

Explanation:

The filter is applied in the output direction on interface me0.0, so it examines traffic leaving the management interface. The first term matches packets whose destination port is SSH and uses the count action, which increments counter c1 for those matching egress SSH packets.

NEW QUESTION # 122

Which two statements are correct regarding Layer 2 network switches? (Choose two.)

- A. Switches create a single collision domain.
- B. Switches do not learn MAC addresses.
- C. Switches flood broadcast traffic.
- D. Switches are susceptible to traffic loops.

Answer: C,D

NEW QUESTION # 123

.....

If you have tried on our JN0-106 exam questions, you may find that our JN0-106 study materials occupy little running memory. So it will never appear flash back. If you want to try our JN0-106 learning prep, just come to free download the demos which contain the different three versions of the JN0-106 training guide. And you will find every version is charming. Follow your heart and choose what you like best on our website.
