

1Z0-1075-26 Exam Collection Pdf - 1Z0-1075-26 Latest Test Cost

What's more, part of that PassExamDumps 1Z0-1075-26 dumps now are free: <https://drive.google.com/open?id=1IRYkrqjCgIgtKklzHRDZ92CXIziezfs>

The web-based format gives results at the end of every Oracle 1Z0-1075-26 practice test attempt and points the mistakes so you can get rid of them before the final attempt. This online format of the Oracle Manufacturing Cloud 2026 Implementation Professional (1Z0-1075-26) practice exam works well with Android, Mac, Windows, iOS, and Linux operating systems.

Oracle 1Z0-1075-26 Exam Syllabus Topics:

Section	Objectives
Topic 1: Manufacturing Cloud Setup and Configuration	- Enterprise Structure and Manufacturing Setup • 1. Plant and Work Area Configuration • 2. Work Centers and Resources Setup
Topic 2: Quality Management	- Inspection and Quality Control • 1. Nonconformance Handling • 2. Inspection Plans and Characteristics

Topic 3: Work Definition and Product Structure	- Work Definitions 1. Items, BOMs, and Routings 2. Version Control and Change Management
Topic 4: Inventory and Supply Chain Integration	- Inventory Transactions 1. Material Issuance and Completion 2. Subinventory and Locator Management
Topic 5: Cost Management and Reporting	- Manufacturing Costing 1. Cost Rollups and Accounting Integration 2. Manufacturing Analytics and Reports
Topic 6: Work Execution Management	- Production Execution 1. Material and Resource Transactions 2. Work Orders and Execution Flow

Free Updates for 365 Days on Oracle 1Z0-1075-26 Exam Questions

If you are sure that you want to be better, then you must start taking some measures. Selecting 1Z0-1075-26 practice prep may be your key step. If you are determined to pass the exam, our 1Z0-1075-26 study materials can provide you with everything you need. You can have the 1Z0-1075-26 Learning Materials, study plans and necessary supervision you need. You will have no reason to stop halfway until you get success.

Oracle Manufacturing Cloud 2026 Implementation Professional Sample Questions (Q21-Q26):

NEW QUESTION # 21

Which statement is NOT true about user-defined work order statuses?

- A. All the new statuses are searchable so you can filter your job and manage the work order life cycle more easily.
- B. It is not recommended to update the name of the system status.
- C. The system automatically updates user-defined work order statuses.
- D. They are displayed on work order reports.

Answer: C

Explanation:

User-defined work order statuses provide flexibility in managing the lifecycle of work orders in Oracle Manufacturing Cloud.

However, the following is not true:

The system does not automatically update user-defined work order statuses. These statuses are manually updated by users to reflect the work order's progress through custom-defined states.

Correct statements:

Displayed on work order reports: User-defined statuses are visible in work order reports, allowing users to track the status of different orders.

Name changes to system status: It is not recommended to alter system-defined status names as it could disrupt core system processes and workflows.

Searchability of new statuses: User-defined statuses are searchable, making it easier to manage and track work orders.

NEW QUESTION # 22

A Production Operator needs to review the materials issued, resources charged, and operations performed for a job that was executed in the previous shift.

Which task should the operator select to review all the transactions in a single place for both work order and orderless execution?

- A. Report Resource, Material, and Operation Transactions
- B. Manage Work Orders
- C. Review Dispatch List
- **D. Review Production Transaction History**

Answer: D

Explanation:

To review all the transactions associated with a job, including materials issued, resources charged, and operations performed, the Production Operator should select Review Production Transaction History. This task provides a comprehensive overview of all transaction types, whether for work order or orderless execution, in a single place.

Review Production Transaction History offers a detailed record of all activities performed during a work order or orderless transaction, making it easy for operators to audit and review the work executed in previous shifts.

Incorrect options:

Report Resource, Material, and Operation Transactions (A) is used for recording transactions, not for reviewing historical data. Manage Work Orders (B) and Review Dispatch List (D) provide more general management and operational details, but not the comprehensive transactional history.

NEW QUESTION # 23

You create a work order, in which some of the operations have components with the Push supply type. While reporting material consumption on the Report Material Transaction page, you want the Push components to default whenever the operator selects Show Components.

Which setup task must you perform in the Manage Plant Parameters section to achieve this?

- A. Set Default Transaction Mode to ALL
- **B. Set Default Transaction Mode to Work Definition.**
- C. Set Default Transaction Mode to Entered and Default Transaction Quantity to Work Definition.
- D. Set Default Transaction Mode to Entered.

Answer: B

Explanation:

To ensure that Push components are automatically defaulted when reporting material consumption on the Report Material Transaction page, you must configure the system to use the Work Definition as the default source for transactions.

Setting Default Transaction Mode to Work Definition ensures that the system automatically pulls the component list and quantities as defined in the work order or work definition when operators perform material transactions. This setting streamlines the material consumption process for Push supply type components.

NEW QUESTION # 24

In which two places can you create and edit user-defined work order statuses?

- A. Work Definition work area tasks
- **B. Work Execution work area tasks**
- **C. Functional Setup Manager > Setup: Manufacturing and Supply Chain Materials Management**
- D. Scheduled Processes

Answer: B,C

Explanation:

User-defined work order statuses can be created and edited in the following areas of Oracle Manufacturing Cloud:

Functional Setup Manager: This is where the configuration of user-defined work order statuses is performed under the "Manufacturing and Supply Chain Materials Management" setup. Users can define new statuses and configure their behavior.

Work Execution work area tasks: Users can also manage work order statuses directly in the Work Execution area, which is part of the day-to-day management of production orders.

Incorrect options:

Scheduled Processes (A) and Work Definition work area tasks (B) are not areas where work order statuses are defined or edited.

NEW QUESTION # 25

Which statement is NOT true about cumulative lead time?

- A. It calculates cumulative manufacturing lead times by rolling up manufacturing lead times of make items.
- B. It calculates cumulative total lead times by rolling up lead times of make items and adding up lead time values of buy items.
- C. It updates the item's lead time attributes at the end of the calculation process: cumulative manufacturing and cumulative total lead times.
- D. It updates lead time percent at the operation level in the work definition.

Answer: D

Explanation:

Cumulative lead time is a key concept in Oracle Manufacturing Cloud, where it calculates the total time required to manufacture an item. The following points clarify the calculations:

Statement D is incorrect because cumulative lead time does not update the lead time percent at the operation level in the work definition. Instead, cumulative lead time focuses on rolling up the lead times of both make and buy items to provide an overall lead time for the entire production process.

Correct Statements:

Statement A: The system calculates cumulative manufacturing lead time by summing up the lead times of all make items in the production process.

Statement B: At the end of the cumulative lead time calculation process, it updates the lead time attributes of the item, specifically cumulative manufacturing and cumulative total lead times.

Statement C: Cumulative total lead time includes both make and buy item lead times, representing the complete production cycle from procurement to manufacturing.

NEW QUESTION # 26

.....

Our 1Z0-1075-26 exam questions boost 3 versions: PDF version, PC version, APP online version. You can choose the most suitable method to learn. Each version boosts different characteristics and different using methods. For example, the APP online version of 1Z0-1075-26 guide torrent is used and designed based on the web browser and you can use it on any equipment with the browser. It boosts the functions of exam simulation, time-limited exam and correcting the mistakes. There are no limits for the amount of the using persons and equipment at the same time. The PDF version of our 1Z0-1075-26 Guide Torrent is convenient for download and printing. It is simple and suitable for browsing learning and can be printed on papers to be convenient for you to take notes. Before you purchase our 1Z0-1075-26 test torrent please visit the pages of our product on the websites and carefully understand the product and choose the most suitable version of 1Z0-1075-26 exam questions.
