Quiz SAP - C-BCBDC-2505 - Pass-Sure Reliable SAP Certified Associate - SAP Business Data Cloud Test Braindumps

A bold attempt is half success. Stop hesitating again, just try and choose our C-BCBDC-2505 test braindump. Please trust me, if you pay attention on dumps content, even just remember the questions and answers you will clear your exam surely. C-BCBDC-2505 test braindump will be the right key to your exam success. As long as the road is right, success is near. Don't be over-anxious, wasting time is robbing oneself. Our SAP C-BCBDC-2505 test braindump will be definitely useful for your test and 100% valid. Money Back Guaranteed!

SAP C-BCBDC-2505 Exam Syllabus Topics:

Topic	Details

Topic 1	• SAP Datasphere: This section of the exam measures the skills of Solution Consultants and covers a comprehensive understanding of SAP Datasphere. Candidates should demonstrate knowledge of data modeling, transformation, and harmonization using SAP Datasphere tools. It evaluates how well they can work with data layer structuring, semantic modeling, and integration to support real-time data access for various business applications.
Topic 2	• SAP Analytics Cloud: This section of the exam measures the skills of Data Analysts and covers the use of SAP Analytics Cloud in data visualization, story building, and dashboard creation. Candidates should be familiar with its planning and predictive capabilities, along with how to utilize data insights to drive business decision-making. It also includes managing user access and collaborating through shared analytics assets.
Topic 3	• SAP Business Data Cloud: This section of the exam measures the skills of Data Analysts and covers core concepts of the SAP Business Data Cloud. Candidates are expected to understand its key components, integration mechanisms, and how it functions as a foundation for unified data management across SAP and non-SAP environments. The focus is on enabling data connectivity and providing governed access to data across the enterprise.

SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q65-Q70):

NEW QUESTION # 65
Which entity can be used as a direct source of an SAP Datasphere analytic model?

- A. Remote tables of semantic type Text
- B. Business entities of semantic type Dimension
- C. Tables of semantic type Hierarchy
- D. Views of semantic type Fact

Answer: D

Explanation:
An SAP Datasphere analytic model is specifically designed for multi-dimensional analysis, and as such, it requires a central entity that contains the measures (key figures) to be analyzed and links to descriptive dimensions. Therefore, a View of semantic type Fact (B) is the most appropriate and commonly used direct source for an analytic model. A "Fact" view typically represents transactional data, containing measures (e.g., sales amount, quantity) and foreign keys that link to dimension views (e.g., product, customer, date). While "Dimension" type entities (A) provide descriptive attributes and are linked to the analytic model, they are not the direct source of the model itself. Tables of semantic type Hierarchy (C) are used within dimensions, and remote tables of semantic type Text (D) typically provide text descriptions for master data, not the core fact data for an analytic model. The Fact view serves as the central point for an analytic model's measures and its connections to all relevant dimensions.

NEW QUESTION # 66
What are some features of the out-of-the-box reporting with intelligent applications in SAP Business Data Cloud? Note: There are 2 correct answers to this question.

- A. Manual creation of artifacts across all involved components
- B. AI-based suggestions for intelligent applications in the SAP Business Data Cloud Cockpit
- C. Automated data provisioning from business application to dashboard
- D. Services for transforming and enriching data

Answer: C,D

Explanation:
The out-of-the-box reporting capabilities with intelligent applications in SAP Business Data Cloud (BDC) are designed to streamline the analytical process and deliver immediate value. Two significant features include automated data provisioning from business application to dashboard. This means that intelligent applications handle the end-to-end flow of data, from its source in operational systems, through processing in BDC, and finally to visualization in dashboards, with minimal manual intervention. This automation ensures timely and consistent data delivery for reporting. Additionally, these intelligent applications leverage services for transforming and enriching data. As part of the pre-built logic within these applications, data is automatically transformed (e.g., aggregated,

filtered) and enriched (e.g., adding calculated KPIs, combining with master data) to make it immediately suitable for reporting and analysis. This reduces the need for manual data manipulation by users, providing ready-to-consume insights.

NEW QUESTION # 67

Which integration scenarios of SAP BW with SAP Business Data Cloud are supported?
There are 2 correct answers to this question.
Response:

- A. Using SAP BW/4HANA Cloud, private edition queries as source for SAP Business Data Cloud Intelligent Applications.
- B. Provisioning Data Products from SAP BW/4HANA On-Premise Infoproviders.
- C. Extract data from legacy ECC systems through SAP Datasphere, SAP BW bridge.
- D. Onboarding SAP BW 7.5 Cloud, private edition queries as SAP Business Data Cloud Analytical Models.

Answer: C,D

NEW QUESTION # 68

What are the key characteristics of SAP Datasphere?
Please select all the correct answers that apply.
Response:

- A. Deployment: Free choice between on premise or private cloud
- B. Elasticity: A 'pay for what you use' concept
- C. Collaboration: Enablement of both enterprise IT users and line of business users
- D. End-to-end Integration: Consumption of data from any source in SAP Analytics Cloud
- E. Performance: Leverage the power of SAP HANA Cloud

Answer: B,C,D,E

NEW QUESTION # 69

Which of the following is true about data access control in SAP Business Data Cloud?
Please choose the correct answer.
Response:

- A. Access is managed using roles and policies
- B. There is no support for data-level authorization
- C. Access can be assigned only at the workspace level
- D. All users have full read-write access by default

Answer: A

NEW QUESTION # 70
