CompTIA New CS0-003 Braindumps: CompTIA Cybersecurity Analyst (CySA+) Certification Exam - PassCollection Authoritative Provider

CompTIA training pdf material is the valid tools which can help you prepare for the CS0-003 actual test. CS0-003 vce demo gives you the prep hints and important tips, helping you identify areas of weakness and improve both your conceptual knowledge and hands-on skills. With the help of CS0-003 study material, you will master the concepts and techniques that ensure you exam success. What's more, you can receive CS0-003 updated study material within one year after purchase. Besides, you can rest assured to enjoy the secure shopping for CompTIA exam dumps on our site, and your personal information will be protected by our policy.

CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q240-Q245):

NEW QUESTION # 240

Which of the following responsibilities does the legal team have during an incident management event? (Select two).

- A. Coordinate additional or temporary staffing for recovery efforts.
- B. Conduct computer and network damage assessments for insurance.
- C. Review and approve new contracts acquired as a result of an event.
- D. Ensure all system security devices and procedures are in place.
- E. Advise the incident response team on matters related to regulatory reporting.
- F. Verify that all security personnel have the appropriate clearances.

Answer: C,E

Explanation:

The legal team plays a crucial role in managing the legal and compliance aspects of incident response. They review and approve contracts (B) for emergency services, like incident response firms, and provide guidance on regulatory reporting (C), ensuring the organization meets compliance requirements. According to CompTIA Security+ guidelines, legal teams focus on regulatory and contractual matters rather than operational aspects like staffing (A) or security procedures (D).

NEW QUESTION # 241

A laptop that is company owned and managed is suspected to have malware. The company implemented centralized security logging. Which of the following log sources will confirm the malware infection?

- A. Firewall logs
- B. MFA logs
- C. IDS logs
- D. XDR logs

Answer: D

Explanation:

XDR logs will confirm the malware infection because XDR is a system that collects and analyzes data from multiple sources, such as endpoints, networks, cloud applications, and email security, to detect and respond to advanced threats¹². XDR can provide a comprehensive view of the attack chain and the context of the malware infection. Firewall logs, IDS logs, and MFA logs are not sufficient to confirm the malware infection, as they only provide partial or indirect information about the network traffic, intrusion attempts, or user authentication.

NEW QUESTION # 242

A small company does not have enough staff to effectively segregate duties to prevent error and fraud in payroll management. The Chief Information Security Officer (CISO) decides to maintain and review logs and audit trails to mitigate risk. Which of the following did the CISO implement?

- A. Compensating controls
- B. Administrative controls
- C. Corrective controls
- D. Operational controls

Answer: A

NEW QUESTION # 243

You are a cybersecurity analyst tasked with interpreting scan data from Company A's servers. You must verify the requirements are being met for all of the servers and recommend changes if you find they are not. The company's hardening guidelines indicate the following:

* TLS 1.2 is the only version of TLS running.

* Apache 2.4.18 or greater should be used.

* Only default ports should be used.

INSTRUCTIONS

using the supplied data, record the status of compliance with the company's guidelines for each server.

The question contains two parts: make sure you complete Part 1 and Part 2. Make recommendations for Issues based ONLY on the hardening guidelines provided.

Part 1:

CompTIA

Answer:

Explanation:
check the explanation part below for the solution:
Explanation:
Part 1:

Compliance Report

Fill out the following report based on your analysis of the scan data.

☐ AppServ1 is only using TLS 1.2

☒ AppServ2 is only using TLS 1.2

☒ AppServ3 is only using TLS 1.2

☒ AppServ4 is only using TLS 1.2

☐ AppServ1 is using Apache 2.4.18 or greater

☒ AppServ2 is using Apache 2.4.18 or greater

☒ AppServ3 is using Apache 2.4.18 or greater

☐ AppServ4 is using Apache 2.4.18 or greater

Part 2:

Based on the compliance report, I recommend the following changes for each server:

AppServ1: No changes are needed for this server.

AppServ2: Disable or upgrade TLS 1.0 and TLS 1.1 to TLS 1.2 on this server to ensure secure encryption and communication between clients and the server. Update Apache from version 2.4.17 to version 2.4.18 or greater on this server to fix any potential vulnerabilities or bugs.

AppServ3: Downgrade Apache from version 2.4.19 to version 2.4.18 or lower on this server to ensure compatibility and stability with the company's applications and policies. Change the port number from 8080 to either port 80 (for HTTP) or port 443 (for HTTPS) on this server to follow the default port convention and avoid any confusion or conflicts with other services.

AppServ4: Update Apache from version 2.4.16 to version 2.4.18 or greater on this server to fix any potential vulnerabilities or bugs. Change the port number from 8443 to either port 80 (for HTTP) or port 443 (for HTTPS) on this server to follow the default port convention and avoid any confusion or conflicts with other services.

NEW QUESTION # 244

An MSSP received several alerts from customer 1, which caused a missed incident response deadline for customer 2. Which of the following best describes the document that was violated?

- A. SLO
- B. MOU
- C. KPI
- D. SLA

Answer: D

Explanation:

An SLA, or Service Level Agreement, is a contract between a service provider and its customers that documents what services the provider will furnish and defines the service standards the provider is obligated to meet. In the scenario described, the missed incident response deadline is a clear indicator of an SLA violation. An SLA usually outlines the metrics by which service is measured as well as remedies or penalties should agreed-upon service levels not be achieved. Unlike a KPI (Key Performance Indicator) which is a quantifiable measure used to evaluate the success of an organization, employee, etc., in meeting objectives for performance, or an MOU (Memorandum of Understanding) which is a formal agreement between two or more parties, an SLA is focused on the performance and quality metrics applicable to the service provided. SLO (Service Level Objective) is related and often part of an SLA, representing the specific measurable characteristics of the SLA such as availability, throughput, frequency, response time, or quality.

NEW QUESTION # 245

.....

All formats of PassCollection's products are immediately usable after purchase. We also offer up to 365 days of free updates so you can prepare as per the CompTIA CS0-003 Latest Exam content. PassCollection offers a free demo version of the CompTIA Certification Exams so that you can assess the validity of the product before purchasing it.
