

Free PDF Quiz 2026 Oracle Authoritative 1z1-076: Oracle Database 19c: Data Guard Administration Latest Exam Simulator

P.S. Free & New 1z1-076 dumps are available on Google Drive shared by Actual4Cert: <https://drive.google.com/open?id=1Jspbe1pSLqJLjkvGhTLSjUM6ts25Oejk>

With the pass rate reaching 98.65%, our 1z1-076 training materials have gained popularity in the international market. If you choose us, we can ensure that you can pass the exam in your first attempt. We are pass guarantee and money back guarantee for 1z1-076 exam dumps. If you fail to pass the exam, we will give you refund. You can try free demo before buying 1z1-076 Exam Materials, so that you can have deeper understanding of what you are going to buy. Free update for one year is available, the update version for 1z1-076 exam braindumps will be sent to your email automatically.

What is Actual4Cert Oracle 1z1-076 exam training materials? There are many online sites provide Oracle 1z1-076 exam training resources. But Actual4Cert provide you the most actual information. Actual4Cert have professional personnel of certification experts, technical staff, and comprehensive language masters. They are always studying the latest Oracle 1z1-076 Exam. Therefore, if you want to pass the Oracle 1z1-076 examination, please Login Actual4Cert website. It will let you close to your success, and into your dream paradise step by step.

Test Oracle 1z1-076 Pattern - 1z1-076 Test Objectives Pdf

Most people define 1z1-076 study tool as regular books and imagine that the more you buy, the higher your grade may be. It is true this kind of view make sense to some extent. However, our 1z1-076 real questions are high efficient priced with reasonable amount, acceptable to exam candidates around the world. Our 1z1-076 practice materials comprise of a number of academic questions for your practice, which are interlinked and helpful for your exam. Unlike those untenable practice materials in the market, our 1z1-076 practice materials are highly utilitarian for their accuracy of the real exam because all content are compiled by proficient experts who engaged in this area more than ten years. It is our unwavering will to help you pass the exam by 1z1-076 study tool smoothly.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 2	<ul style="list-style-type: none"> Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 3	<ul style="list-style-type: none"> Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 5	<ul style="list-style-type: none"> Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 6	<ul style="list-style-type: none"> Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.

Oracle Database 19c: Data Guard Administration Sample Questions (Q41-Q46):

NEW QUESTION # 41

Which three actions are performed by the START PLAN procedure of the DBMS ROLLING package?

- A. creating a guaranteed restore point on the standby databases
- B. switching the primary database to the logical standby role
- C. building a LogMiner dictionary on the primary database instance
- D. starting media recovery on all the Leading Group Standby databases
- E. creating a guaranteed restore point on the primary database
- F. converting the designated physical standby database into a logical standby database

Answer: A,C,E

Explanation:

The DBMS_ROLLING package facilitates a rolling upgrade process across a Data Guard configuration. The START PLAN procedure in particular handles several critical actions, including:

- * Creating a guaranteed restore point on the standby databases (B): This ensures that the standby databases can be reverted to their state before the rolling upgrade process in case of any issues.
- * Building a LogMiner dictionary on the primary database instance (C): This is necessary for logical standby databases to interpret redo data during the SQL Apply process.
- * Creating a guaranteed restore point on the primary database (D): Similar to the standby databases, this ensures that the primary database can be reverted to a known good state if necessary.
- * Oracle Database PL/SQL Packages and Types Reference
- * Oracle Data Guard Concepts and Administration Guide

NEW QUESTION # 42

Which three can be done using Data Guard Broker?

- A. Monitoring and managing redo transport services, and log apply services.
- B. Converting physical standby databases to snapshot standby databases.
- C. Define logical standby database skip rules.
- D. Configuring the standby control file, server parameter file, and data files for a standby database.
- E. Create a new physical standby database.
- F. Automating failover to a specified target standby database.

Answer: B,E,F

NEW QUESTION # 43

Which two are true about managing and monitoring Oracle container databases in a Data Guard environment using the broker?

- A. If the primary database is not a container database, then a standby may be a container database.
- B. After a role change, the broker opens all Pluggable databases (pdbs) on the new primary.
- C. If the primary database is a container database, then a logical standby may be a non-container database.
- D. If the primary database is a container database, then a physical standby may be a non-container database.
- E. All broker actions execute at the root container for container databases.

Answer: B,E

Explanation:

In the context of Oracle Data Guard and container databases (CDBs) managed by Data Guard Broker:

* All broker actions execute at the root container for container databases (D): When using Data Guard Broker to manage a CDB, the actions performed by the broker are executed at the level of the root container. This is because the root container maintains the control and configuration information that applies to the entire CDB, including all of its pluggable databases (PDBs).

* After a role change, the broker opens all Pluggable databases (PDBs) on the new primary (E):

Following a role transition such as a switchover or a failover, Data Guard Broker ensures that all PDBs within the CDB of the new primary database are opened, which is essential to resume operations of the PDBs without manual intervention.

NEW QUESTION # 44

Which THREE are among the various tasks performed by the Data Guard Monitor (DMON) process?

- A. maintaining information about all members of the broker configuration in binary configuration files.
- B. communicating with the DMON process of the observer to monitor a primary database in case a fast start failover is required
- C. performing role transitions when switchover requests are made
- D. activating role-based services appropriately in the various database instances of the configuration, based on the database role
- E. communicating with dkon processes in other database instances that are part of the broker configuration

Answer: A,C,D

Explanation:

The Data Guard Monitor (DMON) process is a key component of Oracle Data Guard. It plays a crucial role in managing and monitoring the state of both the primary and standby databases in a Data Guard configuration.

* Performing role transitions when switchover requests are made (A): DMON is responsible for coordinating the switchover process between the primary and standby databases. This involves safely transitioning the roles of the databases to ensure data protection and availability.

* Maintaining information about all members of the broker configuration in binary configuration files (B): DMON maintains detailed information about the databases in the Data Guard configuration, including their roles, states, and network addresses. This information is stored in binary configuration files, which are used by the Data Guard Broker to manage the Data Guard environment.

* Activating role-based services appropriately in the various database instances of the configuration, based on the database role (C): DMON activates services that are appropriate for the role of each database in the Data Guard configuration. For example, it may activate different services on a primary database than on a standby database, based on the specific requirements of each role.

NEW QUESTION # 45

Examine the Data Guard configuration:

DGMGRL> show configuration;

Configuration - Animals

Protection Mode: Max Availability

Databases:

- dogs - Primary database sheep
- Physical standby database cats
- Physical standby database

Fast-Start Failover: DISABLED

Configuration Status: SUCCESS

An attempt to enable fast-start failover raises an error:

DGMGRL> enable fast_start failover;

Error: ORA-16693: requirements not met for enabling fast-start failover Failed.

Identify three possible reasons for this error.

- A. The LogXptMode property is set to fastsync on Dogs.
- B. The LogxptModr property is set to async on Sheep while Sheep is the target standby database.
- C. The LogXptMode property is set to FASTSYNC on Cats while Sheep is the target standby database.
- D. The fastStartFailoverTarget property is not set on Dogs.
- E. The LogXptMode property is set to async on Dogs.

Answer: B,D,E

Explanation:

When enabling fast-start failover, certain conditions must be met:

The fastStartFailoverTarget property is not set on Dogs (A): The primary database (Dogs) needs to have a fast-start failover target configured for the operation to succeed.

The LogXptMode property is set to ASYNC on Sheep while Sheep is the target standby database (B): Fast-start failover requires synchronous redo transport (SYNC or FASTSYNC) to ensure zero data loss, which is a prerequisite for enabling the feature.

The LogXptMode property is set to ASYNC on Dogs (D): Similar to the previous point, the primary database must be configured to use synchronous redo transport for the fast-start failover to be possible.
