CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q224-Q229):

NEW QUESTION # 224

What is the SOLR database for?

- A. Serves GUI responsible to transfer request to the DLE server
- B. Writes data to the database and full text search
- **C. Used for full text search and enables powerful matching capabilities**
- D. Enables powerful matching capabilities and writes data to the database

Answer: C

Explanation:

The SOLR database is used for full text search and enables powerful matching capabilities. The SOLR database is part of the Log Server component, which is responsible for indexing and storing logs received from Security Gateways and other sources. The SOLR database allows users to perform complex queries on the logs using keywords, filters, operators, and expressions.

References: Log Server

NEW QUESTION # 225

Using Web Services to access the API, which Header Name-Value had to be in the HTTP Post request after the login?

- A. user-uid
- **B. X-chkp-sid Session Unique Identifier**
- C. uuid Universally Unique Identifier
- D. API-Key

Answer: B

Explanation:

The header name-value that has to be in the HTTP Post request after the login when using Web Services to access the API is X-chkp-sid Session Unique Identifier. This header contains the session ID that is returned by the login command and identifies the session for subsequent API commands. The session ID is valid for a limited time and can be extended by using keepalive or logout commands. References: [Check Point R81 Management API Reference Guide]

NEW QUESTION # 226

What is the recommended way to have a redundant Sync connection between the cluster nodes?

- A. In the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management and define two Sync interfaces per node. Connect both Sync interfaces without using a switch.
- B. Use a group of bonded interfaces. In the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management and define a Virtual IP for the Sync interface.
- C. Use a group of bonded interfaces connected to different switches. Define a dedicated sync interface, only one interface per node using the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management.
- D. In the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management and define two Sync interfaces per node. Use two different Switches to connect both Sync interfaces.

Answer: C

Explanation:

Explanation

The recommended way to have a redundant Sync connection between the cluster nodes is to use a group of bonded interfaces connected to different switches. In the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management, you should define a dedicated sync interface, only one interface per node.

NEW QUESTION # 227

Your manager asked you to check the status of SecureXL, and its enabled templates and features. What command will you use to provide such information to manager?

- A. fwaccel stats
- B. fw accel stat
- C. fw acces stats
- D. fwaccel stat

Answer: D

Explanation:

The fwaccel stat command displays the status of SecureXL, and its enabled templates and features. The other commands are either incorrect or incomplete. Reference: [SecureXL Commands]
