Nutanix Certified Associate v6.10 Sample Questions (Q71-Q76):

NEW QUESTION # 71
In Prism Element, to which object are policies such as replication factor and storage efficiency settings applied?

- A. Storage Pool
- B. Container
- C. Virtual Machine
- D. vBlock

Answer: B

Explanation:
In Prism Element, policies such as replication factor and storage efficiency settings are applied to Containers. A container is a logical grouping of one or more storage pools and defines the storage resources available to virtual machines. By applying policies to a container, you can set the replication factor, storage efficiency settings, and other storage-related settings for all of the virtual machines that are associated with that container. This is a fundamental concept in Nutanix Platform.

NEW QUESTION # 72
An administrator is performing AHV upgrades on an 8-node cluster configured with Redundancy Factor 3.
How many nodes would be placed into maintenance mode simultaneously?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:
In a cluster configured with Redundancy Factor 3 (RF3), the system ensures that data is replicated across at least three nodes to tolerate the failure of two nodes. During an AHV upgrade, Nutanix only places one node at a time into maintenance mode, even in an RF3 configuration, to minimize the impact on data redundancy and cluster operations.
* A. 1:Correct, as AHV upgrades proceed node by node in RF3.
* B. 2, C. 3, D. 4:These options are incorrect, as only one node is upgraded at a time regardless of RF3.

NEW QUESTION # 73
An administrator needs to implement a disaster recovery plan. The company has two sites, each with its own Nutanix AHV cluster.
Latency between the sites is 30ms.
Which built-in functionality in Prism Element could the administrator use to enable disaster recovery between the two clusters?

- A. Recovery Plan
- B. Metro Cluster
- C. Data Protection
- D. Protection Policies

Answer: B

Explanation:
TheData Protectionfeature in Prism Element provides built-in disaster recovery capabilities by enabling asynchronous replication between Nutanix clusters. With a latency of 30ms between the two sites, asynchronous replication can ensure that data is replicated efficiently while adhering to recovery point objectives (RPO). The administrator can configure Protection Domains and Replication Targets to set up DR between the clusters.
* A. Recovery Plan:Incorrect, as Recovery Plans are part of Prism Central for orchestrated failover, not Prism Element.
* B. Protection Policies:Incorrect, as these are defined under Prism Central.
* C. Data Protection:Correct, as it enables disaster recovery via replication configurations in Prism Element.
* D. Metro Cluster:Incorrect, as Metro Cluster requires low latency (<5ms) and is not suitable for a
30ms latency scenario.

NEW QUESTION # 74
Which workload type would be a good fit for NFS on Objects?

- A. Filesystems used for transitory or work spaces
- B. Workloads that are updated frequently
- C. End user computing workloads
- D. Large-scale, read heavy workloads

Answer: D

Explanation:

The correct answer isC. Large-scale, read heavy workloads.
NFS on Objectsis a Nutanix feature allowingNFS clients to interact with Nutanix Objects (S3-compatible object storage)by exposing object buckets viaNFS v3 protocol. This is ideal for workloads that require:
* Large-scale access to unstructured data
* High read concurrency
* Cost-effective storage for infrequently changed files
Best Use Case:
Backup archives, analytics workloads, image repositories, or video streaming systems withread-heavy profiles.
Clarifications:
* A (EUC workloads):Typically require fast, low-latency block storage (e.g., vDisks).
* B (Transitory FS):Better suited for file services like Nutanix Files.
* D (Frequent updates):Not ideal for object storage via NFS; performance will degrade under frequent write operations.
Official Reference:

* Nutanix Documentation Portal - Objects and NFS
* Excerpt: "NFS on Objects is best suited for large-scale, read-heavy use cases where file system semantics are needed on top of object-based storage."

NEW QUESTION # 75
An administrator wants to apply tags to licenses to simplify future renewals.
What interface would be used to complete this operation?

- A. Prism Element Licensing
- B. License Inventory in the Support Portal
- C. Prism Central Licensing
- D. Clusters in the Support Portal

Answer: C

Explanation:
Applying tags to licenses to streamline future renewals is a task that can be completed inPrism Central Licensing. Prism Central provides centralized license management for clusters, enabling administrators to apply and manage license tags, which simplifies tracking and renewal tasks across multiple clusters. Here's how it works:
* Prism Central Licensing Overview:Prism Central includes a dedicated licensing interface that provides a consolidated view of all licenses associated with your clusters. From this interface, administrators can categorize licenses using tags such as "Renewal-2025" or "Production," making it easier to identify and manage renewals or assignments.
* Steps to Apply Tags in Prism Central:
* Navigate toPrism Central > Settings > Licensing.
* Select the desired license(s) from the list.
* Use the "Tags" option to create or apply predefined tags to categorize these licenses.
* Why Not Other Options?:
* A. Clusters in the Support Portal: The Support Portal is primarily used for support-related tasks, such as managing cases or accessing documentation, and does not include license tagging capabilities.
* B. License Inventory in the Support Portal: While the Support Portal allows you to view license inventory, it does not support operational tasks like tagging.
* D. Prism Element Licensing: Prism Element is focused on managing licensing for individual clusters and lacks the centralized management and tagging functionality available in Prism Central.
