

2026 Palo Alto Networks Marvelous Valid NGFW-Engineer Exam Sample

- b) By replacing security policies with predefined rule sets
 - c) By encrypting all traffic entering and leaving the zone
 - d) By dynamically assigning users to security groups
- Answer: a**

03. After upgrading PAN-OS, which action is recommended to ensure that all features function correctly?

- a) Reboot the firewall multiple times.
 - b) Reset all configurations to default.
 - c) Verify and, if necessary, update content and application signatures.
 - d) Disable and re-enable all interfaces.
- Answer: c**

04. In an authentication sequence, what happens if the "Continue on client cert failure" option is enabled?

- a) The firewall will skip client certificate authentication and proceed to the next authentication profile in the sequence.
 - b) The firewall will deny access if the client certificate is invalid.
 - c) The firewall will prompt the user to provide a valid client certificate.
 - d) The firewall will log the failure and terminate the session.
- Answer: a**

05. Before upgrading a Palo Alto Networks firewall to a new PAN-OS version, which preliminary step is crucial to ensure a smooth upgrade process?

- a) Disable all security policies.
 - b) Back up the current configuration.
 - c) Reset the firewall to factory settings.
 - d) Disable High Availability (HA) if configured.
- Answer: b**

06. How does a Palo Alto firewall handle traffic between two different security zones?

- a) Traffic is denied by default unless a security policy explicitly allows it
 - b) Traffic is allowed automatically between zones
 - c) Traffic is automatically encrypted between zones
 - d) Traffic between zones is forwarded without inspection
- Answer: a**

07. For explicit proxy deployment, which port is typically used by the client browsers to send requests to the proxy?

We have chosen a large number of professionals to make NGFW-Engineer learning question more professional, while allowing our study materials to keep up with the times. Of course, we do it all for you to get the information you want, and you can make faster progress. You can also get help from NGFW-Engineer Exam Training professionals at any time. We can be sure that with the professional help of our NGFW-Engineer test guide you will surely get a very good experience. Good materials and methods can help you to do more with less. Choose NGFW-Engineer test guide to get you closer to success!

PDFTorrent provides actual to help candidates pass on the first try, ultimately saving them time and resources. These questions are of the highest quality, ensuring success for those who use them. To achieve success, it's crucial to have access to quality Palo Alto Networks NGFW-Engineer Exam Dumps and to prepare for the likely questions that will appear on the exam. PDFTorrent helps candidates overcome any difficulties they may face in exam preparation, with a 24/7 support team ready to assist with any issues that may arise.

Updated Palo Alto Networks NGFW-Engineer Dumps & Exam NGFW-Engineer Outline

As we all know, the latest NGFW-Engineer quiz prep has been widely spread since we entered into a new computer era. The cruelty of the competition reflects that those who are ambitious to keep a foothold in the job market desire to get the NGFW-

Engineer certification. It's worth mentioning that our working staff considered as the world-class workforce, have been persisting in researching NGFW-Engineer test prep for many years. Our NGFW-Engineer Exam Guide engage our working staff in understanding customers' diverse and evolving expectations and incorporate that understanding into our strategies. Our latest NGFW-Engineer quiz prep aim at assisting you to pass the NGFW-Engineer exam and making you ahead of others. Under the support of our study materials, passing the exam won't be an unreachable mission.

Palo Alto Networks NGFW-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • PAN-OS Networking Configuration: This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active and active • active and active • passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPSec, quantum-resistant cryptography, and GRE tunnels.
Topic 2	<ul style="list-style-type: none"> • Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics.
Topic 3	<ul style="list-style-type: none"> • PAN-OS Device Setting Configuration: This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings.

Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q68-Q73):

NEW QUESTION # 68

A large enterprise wants to implement certificate-based authentication for both users and devices, using an on-premises Microsoft Active Directory Certificate Services (AD CS) hierarchy as the primary certificate authority (CA). The enterprise also requires Online Certificate Status Protocol (OCSP) checks to ensure efficient revocation status updates and reduce the overhead on its NGFWs. The environment includes multiple Active Directory forests, Panorama management for several geographically dispersed firewalls, GlobalProtect portals and gateways needing distinct certificate profiles for users and devices, and strict Security policies demanding frequent revocation checks with minimal latency.

Which approach best addresses these requirements while maintaining consistent policy enforcement?

- A. Configure each firewall independently to trust the root and intermediate CA certificates. Rely only on manual CRL checks for certificate revocation, and import both user and device certificates directly into each firewall's local certificate store for authentication.
- B. Deploy self-signed certificates at each site to simplify local certificate validation and reduce dependencies on a centralized CA. Turn off certificate revocation checks for lower overhead, rely on IP-based rules for GlobalProtect authentication, and use a single certificate profile for both users and devices.
- C. Distribute the root and intermediate CA certificates via Panorama as shared objects to ensure all firewalls have a consistent trust chain. Configure OCSP responder profiles on each firewall to offload revocation checks to an internal OCSP server while keeping CRL checks as a fallback. Maintain separate certificate profiles for user and device authentication and use an automated enrollment method - such as Group Policy or SCEP - to deploy certificates to endpoints.
- D. Obtain wildcard certificates from a public CA for both user and device authentication, and configure firewalls to perform CRL polling at the default update interval. Manually install user certificates on endpoints and synchronize firewall certificate stores through frequent manual SSH updates to maintain consistency.

Answer: C

Explanation:

This approach best addresses the enterprise's requirements for certificate-based authentication, OCSP checks, and consistent policy enforcement:

Distributing the root and intermediate CA certificates via Panorama ensures that all firewalls in the enterprise are consistent in their trust chain and can validate certificates properly.

Configuring OCSP responder profiles on each firewall offloads the revocation checks to an internal OCSP server, which reduces the overhead on the firewalls and ensures fast, real-time certificate status checks.

Using CRL checks as a fallback ensures reliability in case the OCSP responder is unavailable.

Separate certificate profiles for users and devices ensure that the firewall can enforce different security policies based on the type of certificate (user vs. device).

Automated certificate enrollment methods such as Group Policy or SCEP streamline certificate distribution to endpoints, ensuring efficient management of certificates across geographically dispersed firewalls.

NEW QUESTION # 69

Without performing a context switch, which set of operations can be performed that will affect the operation of a connected firewall on the Panorama GUI?

- A. Modification of local security rules, modification of a Layer 3 interface, modification of the firewall device hostname
- B. Modification of pre-security rules, modification of a virtual router, modification of an IKE Gateway Network Profile
- C. Modification of post NAT rules, creation of new views on the local firewall ACC tab, creation of local custom reports
- D. Restarting the local firewall, running a packet capture, accessing the firewall CLI

Answer: A

Explanation:

In Panorama, without performing a context switch, the administrator can perform local configuration tasks directly on the connected firewall. The following operations can be done:

Modification of local security rules: Security rules can be modified directly on the connected firewall from the Panorama GUI.

Modification of a Layer 3 interface: Changes to the Layer 3 interfaces on the connected firewall can be done from Panorama, without needing to switch to the firewall's local interface.

Modification of the firewall device hostname: The firewall's hostname can be changed via Panorama.

NEW QUESTION # 70

After an engineer configures an IPSec tunnel with a Cisco ASA, the Palo Alto Networks firewall generates system messages reporting the tunnel is failing to establish.

Which of the following actions will resolve this issue?

- A. Check that IPSec is enabled in the management profile on the external interface.
- B. Configure the Proxy IDs to match the Cisco ASA configuration.
- C. Ensure that an active static or dynamic route exists for the VPN peer with next hop as the tunnel interface.
- D. Validate the tunnel interface VLAN against the peer's configuration.

Answer: B

Explanation:

The Proxy IDs (or Traffic Selectors) define the local and remote subnets that are allowed to communicate over the IPSec tunnel. If the Proxy IDs on the Palo Alto Networks firewall do not match the configuration on the Cisco ASA, the tunnel will fail to establish because the firewalls won't agree on which traffic to encrypt. Ensuring that the Proxy IDs match between the Palo Alto Networks firewall and the Cisco ASA will resolve the issue.

NEW QUESTION # 71

In an authentication sequence, what happens if the "Continue on client cert failure" option is enabled?

- A. The firewall will prompt the user to provide a valid client certificate.
- B. The firewall will log the failure and terminate the session.
- C. The firewall will skip client certificate authentication and proceed to the next authentication profile in the sequence.

- D. The firewall will deny access if the client certificate is invalid.

Answer: C

NEW QUESTION # 72

Which two statements describe an external zone in the context of virtual systems (VSYS) on a Palo Alto Networks firewall? (Choose two.)

- A. It is associated with an interface within a VSYS of a firewall.
- B. It is a security object associated with a specific virtual router of a VSYS.
- C. It is a security object associated with a specific VSYS.
- D. It is not associated with an interface; it is associated with a VSYS itself.

Answer: A,C

Explanation:

In the context of virtual systems (VSYS) on a Palo Alto Networks firewall, the external zone is typically associated with specific interfaces within a VSYS. Zones are fundamental security objects used to define traffic flow between interfaces, and the external zone would be used for interfaces that connect to external networks.

An external zone is associated with an interface within a VSYS of the firewall. This ensures that traffic from specific interfaces can be classified as belonging to the external zone, allowing the firewall to apply appropriate security policies.

The external zone is indeed a security object that is specific to a given VSYS, as each VSYS can have its own set of zones that are isolated from others.

NEW QUESTION # 73

.....

As you can find on our website, there are three different versions of our NGFW-Engineer exam questions: the PDF, Software and APP online. I love the PDF version of NGFW-Engineer learning guide the best. The PDF files carry all the exam questions and answers, and it is printable. Our dedicated expert team keeps the material updated and upgrades the material, as and when required. The NGFW-Engineer Exam PDF file is portable which can be carried away everywhere easily and also it can be printed.
